REPORT

TO

HIS EXCELLENCY JOHN CAMPBELL, EARL OF ABERDEEN, K.T.,

&c., &c., &c.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

The Annual Detailed Report for the year 1908, which I have now the honour of submitting to Your Excellency, is the forty-fifth which has appeared since the General Registration of Marriages, Births, and Deaths in Ireland came into operation in the year 1864.

The unrevised numbers of Marriages, Births, and Deaths in Ireland for the year 1908 have already been published in the periodical Quarterly Returns, which emanate from this office.

POPULATION.

The returns for the year 1908 show that the natural increase of population, or excess of births over deaths, was 25,148; and that the loss by emigration amounted to 23,295 (which number is less than the number of Emigrants enumerated in 1907, namely, 39,082, and also the average number—38,036—for the ten years, 1898-1907). There would, according to these figures, appear to have been an increase of 1,853 in the population on the 31st December, 1908; with respect to immigration, there is no official record, nor is it taken into account in the estimate of the population to the middle of the year, which was 4,371,455.

GENERAL SUMMARY.

The Marriages registered in Ireland during the year 1908 numbered 22,734; the Births, 102,039; and the Deaths, as shown in Table I. on this page, 76,891. The marriage-rate was 5·20 per 1,000 of the estimated population, showing an increase of 0·06, as compared with that for the year 1907, and an increase of 0·10 as compared with the average rate for the ten years, 1898-1907; the birth-rate was 23·3 per 1,000 of the estimated population, being 0·1 above that for the preceding year, and also 0·1 above the average rate for the ten years, 1898-1907; and the death-rate (17·6 per 1,000), was 0·1 below the rate for the preceding year, and 0·2 under the average rate for the ten years, 1898-1907.

TABLE I.—Showing for each of the years 1898–1908 the estimated **Population*** ; the number of **Marriages, Births,** and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated Population represented thereby; and the averages for the ten years, 1898–1907.

Diagram No. 1, facing page v., shows the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1889-1908, and by the number of Emigrants enumerated in each of these years.

The number of Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties is 2,689. The cases of vacancies or appointments which were dealt with during the year 1908, number 532.

The following table shows the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1908, numbered 703 of the former and 588 of the latter); also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES made; number of CERTIFICATES issued, and Amount received as FEES for SEARCHES, &c., at the GENERAL REGISTER OFFICE, DUBLIN, during the 45 years 1864–1908.

1886, ...	1,527	1,173	225	7	4						

Offences against the Acts administered by this Department reported during the financial year ended 31st March last, numbered 635. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 50 cases. In 35 of these the parties were convicted and punished; in 14 the proceedings were abandoned, the parties (in most instances) paying the costs of Court and complying with the law; and one case was pending at the end of the financial year.

Amongst the offences dealt with the following are included:—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; failure of Registrar to deliver certified copies of entries to Superintendent Registrar; neglect to comply with Requisition to correct entry; neglect of medical practitioner to furnish successful Vaccination Certificate to Registrar; failure of Coroner to furnish Certificate of finding of jury.

A sum of £120 was provided in the estimates to meet legal charges. During the year the total cost of the legal service of the Department was £106 15*s.* 1*d.*, of which sum £47 15*s.* 1*d.* was paid for local professional assistance, and £48 7*s.* for mileage and allowances to the Registrars.

MARRIAGES.

The number of Marriages registered during the year was 22,734, being equivalent to a rate of 5·20 per 1,000 of the estimated population,* which rate is 0·06 above that for the previous year, and 0·10 above the average for the ten years, 1898-1907.

Of the 22,734 Marriages registered during last year, 16,069 were between Roman Catholics; 3,474 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,306 were in Presbyterian Meeting-houses; 446 in "Registered Buildings" belonging to various religious denominations; only 421 by civil contract in the Registrars' offices; 5 were according to the usages of the Society of Friends; and 13 according to the Jewish rites.

The rate for Roman Catholic marriages is 4·95 per 1,000 of the Roman Catholic population estimated to the middle of 1908, or 0·20 over the corresponding average rate for the preceding ten years, and the other Marriages represent a rate of 5·91 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0·13 below the corresponding average rate for the ten years ending with 1907.

The 3,474 Marriages celebrated according to the rites of the Church of Ireland, include 44 by special licence, 2,938 by licence, 468 after the publication of banns, 2 on Registrar's certificate, and in 22 instances no information was afforded as to which of these methods was adopted.

---

* The rates for the total of Ireland and for the county boroughs of Dublin and Belfast and for Londonderry county and county borough are based on the estimated population in the middle of the respective years, those for the provinces for the years 1900–1908, and for the remaining counties for the year 1908 on the population according to the Census of 1901, and those for the provinces for the year 1899 on the population according to the Census of 1891.

The number of Licences for Marriages issued by the Registrars during the year 1908 in Registered Buildings and in the Registrars' Offices was 765.

In the following summary the number of Marriage Licences issued by the Licensing Ministers of the several Presbyterian bodies is given.

Presbytery or Synod.	Number of Licensing Ministers on 31st December, 1908.	Number of Registered Meeting-houses on 31st December, 1908.	Number of Licences issued.
1. General Assembly of the Presbyterian Church in Ireland,	155	592	2,267
2. Remonstrant Synod of Ulster, ...	9	18	31
3. Presbytery of Antrim, ...	6	10	21
4. United Presbytery or Synod of Munster, ...	1	2	.
5. Presbytery of Ireland (United Free Church of Scotland), ...	6	9	25
Total, ...	177	631	2,344

In Ireland, there being no civil restrictions as to the time or place for celebrating marriages between Roman Catholics, a registration of the churches and chapels of the Roman Catholic Church is not necessary for the purposes of this office; but with reference to other religious bodies, a record is kept of the places of Divine worship in which marriages may be lawfully solemnized without special licence. From this it appears that, on the 31st December, 1908, there were 1,489 churches and chapels of the Church of Ireland, 631 registered Presbyterian Meeting-houses, and 417 "Registered Buildings" belonging to various religious denominations. These numbers show an increase of 1 as regards the Church of Ireland, a decrease of 5 in the number of Presbyterian Meeting-houses; and an increase of 6 in the total number of "Registered Buildings" as compared with the previous year.

The number of "Registered Buildings" belonging to the several religious bodies, as revised for the year 1908, is shown in the following list:—

Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.	Denominations.	No. of Places of Worship.
Methodists, ...	259	Salvation Army, ...	9	United Original Seceders,	1
Reformed Presbyterians, ...	38	Seceders, ...	8	"Undenominational," ...	1
Independents, or Congregationalists, ...	28	Non-Subscribing Unitarians,	5	Jews, ...	1
Baptists, ...	28	"The Catholic Apostolic Church,"	2	"Holiness Movement" Church	1
Christian Brethren, ...	24	Covenanters, ...	1	"Presbyterians (Unattached),"	1
Moravians, or United Brethren,	9	Welsh Presbyterians, ...	1	Total, ...	417

Of the 22,734 marriages registered during the year 1908, there were 7,223 recorded in the first quarter, 4,876 in the second, 5,429 in the third, and 5,206 in the fourth.

From calculations based on the numbers given in the Abstract of Marriages, commencing on page 2, it would appear that the marriages of bachelors with spinsters constituted 89·0 per cent. of the total; that those of widowers and spinsters were 7·0 per cent.; that the marriages of bachelors and widows were 2·4 per cent.; and that those of widowers and widows formed 1·6 per cent. of the total marriages. Thus of the men married, 8·6 per cent. were widowers, and of the women, 4·1 per cent. were widows; so that, in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1898–1908, and the average number for the ten years 1898–1907, distinguishing the number of Roman Catholic Marriages registered under the 26 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

It is with regret I have to report that in the great majority of instances the ages of the persons married are not stated, as a complete record of the ages of the persons married would be valuable. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general inclination to take advantage of this circumstance, as in 1908 the ages of both parties were specified in 3,454 cases only, or about one-seventh of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances. In England and Wales, in the year 1907, only 0·86 per cent. of the husbands and 0·96 per cent. of the wives failed to make definite statement of age in the marriage register.

Of 22,734 men married during the year, the number of minors was 377, or 1·66 per cent.; and of the women married 1,451, or 6·38 per cent., were under age.

The highest proportion of husbands (2·08 per cent.) who married under age in 1908 was in the province of Ulster, and of wives (7·89 per cent.) was also in the province of Ulster.

It appears that the percentage of persons married in Ireland, who were under age, is very far below the corresponding percentages in England and Scotland.

An estimation of the progress of elementary education is afforded by the signatures of the contracting persons, as seen in the marriage registers or certificates. In the year 1908, there were 20,913, or 92·0 per cent., of the husbands, and 21,474, or 94·5 per cent., of the wives, who wrote their names, and the remainder signed by marks, as against 19,410, or 86·0 per cent., of the husbands, and 19,702, or 87·3 per cent., of the wives, in the year 1898; 15,770, or 78·6 per cent., of the husbands, and 15,397, or 76·8 per cent., of the wives, in the year 1888; and 18,070, or 71·5 per cent., of the husbands, and 16,775, or 66·3 per cent., of the wives, in the year 1878.

When compared with the corresponding results in the first of the preceding ten years, the percentages for 1908 show a considerable improvement, the percentage of men married in 1898 who wrote their names being 86·0 and of women 87·3; and they exhibit a great advance when compared with the percentage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

In the provinces the percentages among men during the year 1908, range from 89 in Connaught to 94 in Munster; and, for women, from 93 in Ulster to 96 in Munster.

In 469 cases both of the persons married signed the register by "mark," and the register was thus signed by either the husband or the wife in 2,143 cases, so that in 2,612 cases, or 11·5 per cent. of the total number of marriages, one or both of the parties signed by "mark"; and in 20,122 or 88·5 per cent., *both* parties wrote their names.

The proportion per cent. of persons married in each of the eleven years 1898-1908, who wrote their names in the registers or certificates; of minors; of widowers; and of widows; is given for Ireland, and for each of the four provinces, in the following table:—

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1898–1908, the proportion per cent. of Persons who **signed their names,** of Persons **not of Full Age,** and of **Re-marriages.**

	1908,	89·3	93·8	0·52	3·08	6·63	2·60

In each of the provinces of Leinster and Ulster, the highest provincial marriage rate (5·5 per 1,000 of the population, according to the Census of 1901), was recorded. The rate for Munster was 4·9 per 1,000, and that for Connaught 3·9 per 1,000.

For county, or county borough areas, the highest marriage rate (7·2 per 1,000 of the population) was in the county borough of Dublin, and the lowest (3·5) in the county of Galway. Between these extremes the most favourable rates were 7·1 for the county borough of Belfast, 5·9 for the county of Dublin, and 5·3 for each of the counties of Wicklow and Antrim, and Londonderry county and county borough, and the least so were 3·7 for the county of Clare, 3·8 for the county of Mayo, and 4·1 for each of the counties of Donegal, Cavan, and Roscommon.

BIRTHS.

The births registered during the year 1908, namely, 102,039, include 52,396 boys, and 49,643 girls, or 105·5 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·8, or 23·3 per 1,000, which is 0·1 above the average rate per 1,000 for the ten years, 1898-1907.

Of the 102,039 children, whose births were registered in Ireland during the year 1908, 99,449, or 97·5 per cent., were legitimate, and 2,590, or 2·5 per cent. were illegitimate, the latter being 0·1 below the corresponding average percentage for the preceding ten years. These results bear favourable comparison with the returns for most other countries.

The number of male children born in wedlock during the year was 51,090, and of female, 48,359, or 105·6 of the former to every 100 of the latter; of the illegitimate children, 1,306 were males, and 1,284 females, being 101·7 boys to 100 girls.

Of the children born in Ulster, 3·4 per cent. were illegitimate; in Leinster, the percentage was 2·6; in Munster, 2·1; and in Connaught, 0·7, as shown in Table VII.

TABLE VII.—The Percentage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1904–1908 by Provinces.

Provinces.	Proportion per cent. of Legitimate Births					Proportion per cent. of Illegitimate Births.				
	1904.	1905.	1906.	1907.	1908.	1904.	1905.	1906.	1907.	1908.

CONNAUGHT, ...	99·3	99·3	99·3	99·4	99·3	0·7	0·7	0·7	0·6	0·7

The provincial rates represented by the total births registered during the year 1908, were—Leinster, 23·6 per 1,000 of the population in 1901; Munster, 21·9: Ulster, 23·8; and Connaught, 21·0.

The four highest birth-rates for the county or county borough areas were 31·6 for Dublin county borough; 29·7 for Belfast county borough; 25·2 for county Kildare; and 23·3 for county Kerry. The four lowest rates were—18·3 for county Meath; 18·4 for county Roscommon; 18·5 for county Cavan; and 18·7 for King's county.

Of the total births 51·7 per cent. were registered in the first six months of the year (182 days), and 48·3 per cent. in the second six months of the year (184 days).

In the first quarter of the year the total number of births registered was 26,193; in the second, 26,552; in the third, 25,490; and in the fourth, 23,804.

MULTIPLE BIRTHS IN IRELAND, 1908.

Total Births.	Twin Births.	Triplets.	Quadruplets.	Twin children to Total children. One in every	Twin Births.		
					% to Single Births.	To Total Mothers.	
						%	One in every
102,039	1,198	10	–	42·6	1·203	1·188	84·2

An investigation regarding multiple births in Ireland was undertaken for the year 1908, for the first time, with the results which appear in the above table. Of the total births, namely, 102,039, there were 1,198 twin births and 10 triplets; the proportion of twin children to total children was 1 in 42·6, and the percentage of twin births to single was 1·203.

DEATHS.

During the year 1908 the number of deaths registered in Ireland was 76,891, equivalent to 1 in 57, or 17·6 per 1,000 of the population estimated to the middle of the year. The deaths of males amounted to 38,219, and those of females to 38,672, the rate per 1,000 males and 1,000 females, being, respectively, 17·6.

The death-rate (17·6) is 0·1 below that for the year 1907, and 0·2 under the average rate for the preceding ten years.

Many of the Registrars have furnished me with valuable notes, appended to their Quarterly Returns, on the sanitary condition of their respective districts. These notes were published in the Quarterly Returns issued from this Department, and it is most desirable that they should receive the careful attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

For the four provinces the recorded death-rates are as follows:—Connaught, 13·8; Munster, 16·1; Ulster, 18·1; and Leinster, 19·1 per 1,000 of the population, according to the Census of 1901.

The six county or county borough areas having the lowest mortality rates per 1,000 of the population were:—County Mayo, 13·4; county Galway, 13·6; county Leitrim, 13·7; county Roscommon, 14·1; county Kerry, 14·2; and county Clare, 14·4.

The highest rates are as follows:—Dublin county borough, 24·0; Belfast county borough, 19·4; county Carlow, 18·3; Londonderry county and county borough, 18·3; county Armagh, 18·2; and county Down, 18·0.

The number of deaths registered in the first half of the year generally exceeds the number registered in the second half, the deaths registered in the six months of 1908, January to June inclusive, constituting 56·4 per cent. of the total for the year, and those in the remaining six months 43·6 per cent.

The deaths registered in each quarter are represented by the following annual rates:—First quarter, 21·4 per 1,000 of the population; second, 18·3; third, 14·8; and fourth, 15·8. The rate for the first quarter is 0·1 above, the second 0·5 below, the third 0·1 above, and the fourth 0·7 below the average rate for the corresponding quarter in the ten years, 1898-1907.

Of the 76,891 *deaths registered during the year, as will be observed from the table on pp.* 144–153, 3,331 *took place in Infirmaries and General and Special Hospitals;* 1,435 *in Public Lunatic Asylums;* 11,268 *in Workhouses and Workhouse Hospitals; and* 60,857 *were of persons who died "At their Own Homes, &c."*

The number of deaths, in "Infirmaries and General and Special Hospitals," is equivalent to 4·3 per cent. of the total deaths registered in Ireland, the percentages for the four provinces varying from 0·5 in Connaught to 9·1 in Leinster. Of the deaths registered, 14·7 per cent. occurred in Workhouses or Workhouse Hospitals, the respective percentages for the provinces being—Leinster, 17·2; Munster, 19·7; Ulster, 10·8; and Connaught, 11·1.

CAUSES OF DEATH.

The remarks on the causes of mortality in Ireland during the year 1908, which appear in the following pages, are interleaved with Tables and Diagrams for the purpose of facilitating the study of this important subject.

The classification of diseases and causes of death is the same as that used in England and Wales and in Scotland, as the Registrars-General of the three divisions of the Kingdom have adopted the Official Nomenclature of Diseases, published by the Royal College of Physicians of London in 1906, as their standard of classification.

In the tabular statement which follows, I submit to Your Excellency a comprehensive view of the numerical facts contained in this Report regarding the principal causes producing the mortality in Ireland during the year now under notice. Moreover, a comparison is made between these figures and the corresponding figures which obtained in 1907, and with the averages for the preceding decennium, 1898-1907.

STATEMENT showing the number of deaths from the undermentioned causes registered in Ireland during each of the years 1907 and 1908, with the annual average number for the ten years, 1898-1907.

Puerperal Septic Diseases, ..	189	163	217	Violent Deaths, ...	1,916	1,877	1,904

It appears from the foregoing statement that, in comparison with the year 1907, among the principal epidemic diseases,* influenza and cerebro-spinal fever, there was an increased mortality in measles, typhus, influenza, whooping-cough, diphtheria, and diarrhœal diseases, while scarlet fever and enteric fever both show reductions in the number of deaths, and with respect to the mortality from cerebro-spinal fever, there was a reduction from 631 deaths registered in the year 1907 to 127 in the year under notice. The mortality from puerperal septic diseases is above that in the year 1907 by 26 deaths, but below the average of the preceding ten years by 28.

The total number of deaths from all forms of tuberculous disease was 11,293, as against 11,679 registered in the year 1907, the former figure representing a death-rate from the disease of 258 deaths in every 100,000 of the population, and the latter a rate of 267 per 100,000 of the population.

For the purpose of facilitating the examination of the vital statistics of Ireland, I have introduced into this Report six diagrams. Of these, two are new, with respect to the information which they afford. The various diagrams are referred to in their appropriate places. Of the new diagrams, one shows the deaths from all forms of tuberculous disease by conjugal conditions and age-periods, for the whole of Ireland for the year 1908 ; and the other the infant mortality in the September quarter of each of the eight years 1901-1908, in relation to the mean temperature for the months of July, August, and September in the Dublin Registration Area and in Belfast county borough. In the following pages the mortality from the principal causes of death in the whole of Ireland, and in its divisions, are dealt with in series, as indicated by the Official Nomenclature of Diseases, which work, as has already been stated, is the standard adopted for classification in this Report.

GENERAL DISEASES.

Small-pox.—The year 1908 passed away without the addition of one death from small-pox to the mortality records of Ireland ; moreover, the existence of the disease was not reported by any of the officers connected with the General Register Office from any part of the country. In the following tables, information is given regarding mortality from small-pox in Ireland and total vaccinations year by year since 1882, and also special figures regarding the statistics of infants, whose births were registered in each of the four years 1904-1907, with reference to vaccination, being extracted from the several supplementary reports on vaccination statistics prepared year by year in this Department.

The number of deaths from small-pox registered during each of the years 1882-1908, together with the number of successful primary vaccinations registered in each of those years, is shown in the subjoined tabular statement.

The Registrars of Births and Deaths report that 88,576 Successful Primary Vaccinations were registered by them during the year 1908.

Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.	Year.	Number of Deaths registered from Small-pox.	Number of successful Primary Vaccinations in each year.
1882	129	107,613	1891	7	92,267	1900	1	91,150
1883	16	106,961	1892	-	89,527	1901	2	88,520

---

* Small-pox, measles, scarlet fever, typhus, whooping-cough, diphtheria, *pyrexia* (origin uncertain), enteric fever, and diarrhœal diseases.

The following Table gives particulars regarding the Vaccination of the Children whose Births were registered in Ireland during each of the years 1904-1907, with their percentage to the total Births registered during each year.

Years.	Successful Vaccinations (Form A. First Schedule).		Vaccinations Postponed (Form B, first Schedule).		Insusceptible of Vaccine Disease (Schedule D).				Died before Vaccination.		Unaccounted for, owing to removal from District or otherwise.		Defaulters who have not been granted an extension of time under Form B, First Schedule.		Total Births Registered.	
					On the ground of constitutional insusceptibility of the Vaccine Disease.		In respect of the children having already had Small-pox.									
	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.	Number.	Per-centage.
1904	84,068	81·0	2,184	2·1	118	0·1	2	0·0	7,105	6·9	3,774	3·6	6,560	6·3	103,811	100·0
1905	84,326	82·0	2,505	2·4	90	0·1	.	.	6,624	6·5	3,625	3·5	5,662	5·5	102,832	100·0
1906	83,223	80·4	2,555	2·5	121	0·1	.	.	6,955	6·7	4,229	4·1	6,453	6·2	103,536	100·0
1907	81,841	80·4	2,360	2·3	88	0·1	.	.	6,656	6·6	3,567	3·5	7,230	7·1	101,742	100·0

From this Table it appears that 81·0 per cent. of the children whose births were registered in the year 1904 were returned as having been successfully vaccinated; in the year 1905 the percentage was 82·0; in the year 1906 it was 80·4; and regarding the children whose births were registered in 1907, the percentage successfully vaccinated was also 80·4.

In the Report for the year 1907 of the Registrar-General for England and Wales, the following remark is made by Dr. Tatham :—" In the interest of vital statistics it is much to be desired that when certifying a death from small-pox the medical attendant should specify the patient's condition with respect to vaccination by one or other of the following phrases, according to circumstances :—

(1.) No evidence of vaccination.
(2.) Vaccinated in infancy only—number of scars.
(3.) Vaccinated only after infection by small-pox.
(4.) Stated to have been vaccinated, but no scars visible.
(5.) Re-vaccinated—date of re-vaccination, if possible."

Chicken-pox.—There were 5 deaths—2 of males and 3 of females—registered from chicken-pox, all being under 5 years of age.

Measles.—The mortality from measles during the year is represented by a rate of 0·20 per 1,000 of the population of Ireland, estimated to the middle of the year 1908; the deaths numbered 858, and were above the average (701) for the decennium, 1898-1907; the highest rate in the above decennial period occurred in the year 1899, when 1,532 deaths from measles were registered, corresponding to a rate of 0·34 per 1,000 of the estimated population in that year. In the preceding year, the first of the decennial period referred to, the mortality from measles was the lowest, 316 deaths being recorded. It may be seen in the abstracts that the mortality from measles occurs principally at early age-periods, for, of the total—858 deaths—there were 728 (of boys, 379, and of girls, 349), under the age of 5 years. There is no doubt that with the progress of sanitation, and the improvements in the housing and clothing and feeding of the people, the mortality of young children from measles will tend to diminish. In the abstracts which commence on page 144, the number of deaths from measles is given by provinces, by counties, and by poor law unions. The figures there show that the mortality from measles was generally distributed over Ireland. The highest numbers were registered in the following unions:—In Belfast union, 211; in Dublin (North and South unions), 150; in Waterford, 62; in Tralee, 45; in Westport, 24; in Sligo, 22; in Listowel, 21; in Cork, 18; in Newry, 15; in Galway, 14; in Nenagh, 14; in Ballina, 12; in Limerick, 12; in Newtownards, 12; in Rathdown, 11; in Rathkeale, 11; in Castlebar, 10; in Baltinglass, 9; in Killarney, 9; and in Magherafelt union, 9 deaths.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years, 1898-1907; and (2) the respective

NOTE.—In this Table the figures for the years 1902-8
The figures for the years 1898-1901 have been

* The rates for the year 1899 for the Provinces are based on the Census of 1891, those for the years 1900–1908 on the Census of 1901. See Note (*) on page vii.

Scarlet Fever.—Since the opening year of the preceding decade there has been a marked decrease in the mortality from scarlet fever; in the year 1898, 325 deaths, corresponding to a rate of 0·07 per 1,000 of the population, were registered. This decrease is still more marked when a comparison is made with the year 1864 (when the Act for the Registration of Births and Deaths in Ireland came into force), and subsequent years, as shown in the following table:—

TABLE showing the number of Deaths from Scarlet Fever registered in Ireland during each of the years 1864-1908.

YEAR.	No. of Deaths from Scarlet Fever.	YEAR.	No. of Deaths from Scarlet Fever.	YEAR.	No. of Deaths from Scarlet Fever.
1864,	2,605	1879,	1,688	1894,	599
1865,	3,683	1880,	2,443	1895,	590
1866,	3,501	1881,	1,344	1896,	752
1867,	2,145	1882,	1,230	1897,	522
1868,	2,696	1883,	1,765	1898,	325
1869,	3,670	1884,	1,377	1899,	205
1870,	2,978	1885,	1,147	1900,	245
1871,	2,207	1886,	850	1901,	205
1872,	2,459	1887,	973	1902,	186
1873,	2,093	1888,	849	1903,	210
1874,	4,034	1889,	457	1904,	204
1875,	3,845	1890,	319	1905,	170
1876,	2,112	1891,	308	1906,	149
1877,	1,117	1892,	419	1907,	99
1878,	1,079	1893,	457	1908,	72

In the year 1864 the number of deaths from scarlet fever registered in Ireland was 2,605, or 0·46 per 1,000 of the estimated population, but in the year 1874 the number of deaths rose to 4,034 (the highest number recorded), representing a rate of 0·76 per 1,000 of the estimated population.

In the year under notice only 72 deaths (the lowest number on record from this disease) were registered in the whole of Ireland, the annual average for the preceding decade being 200 deaths. Of the 72 deaths, 16 boys and 18 girls were under the age of 5 years.

With regard to locality, there were one or more deaths registered in 27 of the 159 unions or Superintendent Registrars' Districts into which Ireland is sub-divided, as follows:—In each of 15 unions one death from scarlet fever was registered; in 4 unions, 2 deaths were registered; in 2 unions, 3 deaths were registered; in 2 unions (Belfast and Dublin North), 4 deaths were registered; in Lisburn, 5 deaths (including one appertaining to Belfast) were registered; in Limerick, 6; in Cork, 8; and in South Dublin union, 16 deaths from scarlet fever were registered.

Typhus.—Commencing with the year 1869, deaths from typhus in Ireland have been separately published, and a table in my Annual Report for the year 1907 shows the number of deaths from this disease for each of the 39 years, 1869-1907. In the first year of this period 891 deaths from typhus were registered for the whole of Ireland; in the year 1880, the highest number in the period was registered, namely, 934 deaths; nine years later 359 deaths were registered; in 1900 the number had decreased to 128, in 1905 to 68, and in the year now under notice 59 deaths from typhus were registered.

Of the 59 deaths, all were of persons over 5 years of age—14 deaths were of young persons between the ages of 5 years and 20 years, and 45 of the deaths were of persons aged 20 years and upwards. Of the 59 deaths, 28 were of males and 31 were of females. In each of 21 unions one death from typhus was recorded; in each of 9 unions, 2 deaths; in Ennistimon union, 3 deaths; in Belfast, 4 deaths; in Lisburn, 6 deaths (all appertaining to Belfast); and in Cork 7 deaths from typhus were registered.

The marked decrease in the mortality from scarlet fever and from typhus in Ireland is an important fact, with reference to the effect of isolation and disinfection in the treatment of infective diseases; there can be no doubt that the reduction in the mortality from scarlet fever and from typhus is principally due to the measures that are generally so promptly taken to limit the spread of the infection of these diseases.

Whooping-cough.—From the figures supplied in the abstracts in this report it appears that there were 945 deaths from whooping-cough registered for the whole of Ireland in the year 1908, being an increase of 136 over the preceding year, but below the yearly average for the 10 years, 1898-1907, by 87; the total deaths represent an annual rate of 0·22 per 1,000 of the population of Ireland, estimated to the middle of the year. Of the total deaths, 863, or over 91 per cent., were of children under 5 years of age. Of the latter figure, 393 were deaths of males, and 470 were deaths of females, corresponding, respectively, to 1·77 per 1,000 and 2·21 per 1,000 boys and girls living at this age-period. The mortality from whooping-cough was widely distributed through the country, as may be seen in the abstracts. In the following unions, 10 and under 20 deaths were registered during the year:—Ballina, Ballymoney, Birr, Cootehill, Cork, Donegal, Inishowen, Larne, Limerick, Magherafelt, Mountmellick, Nenagh, Rathdown, Skibbereen, Sligo, Tobercurry, and Wexford; and 20 and under 30 deaths from whooping-cough were registered in the following unions:—Carlow, Dunfanaghy, Galway, Lurgan, Omagh, and Strabane; there were 31 deaths registered in Millford union, 47 in Londonderry, 85 in Dublin North and South unions, and 145 deaths were registered in Belfast.

Diphtheria.—It appears from Table IX. that the deaths from diphtheria (372) exceeded the number (283) registered in 1907 by 89, and the annual average (354), of the decade ending with 1907, by 18; the highest number of deaths registered in any year of the above decade was 421 in the year 1902, and the lowest number was 283 in the year 1907. Of the total deaths in the year under notice, 199 were of males, and 173 were of females. Of the males, 119, and of the females, 99 were deaths of children under 5 years of age. The deaths from diphtheria in the whole of Ireland were registered in Poor Law Unions, or Superintendent Registrars' Districts, as follows:—In South Dublin, 39; in Belfast, 26; in Lisburn, 21 (including 12 appertaining to Belfast); in Cork, 20; in North Dublin, 11; in each of Galway, Kilkeel, Limerick, Londonderry, and Strabane unions, 10 deaths; in each of Ballinrobe and Ballymena unions, 8 deaths; in Banbridge, 7; in each of Magherafelt, Mitchelstown, Newry, and Newtownards unions, 6 deaths; in each of Manorhamilton and Tobercurry unions, 5 deaths; moreover, in 7 unions, 4 deaths were registered; in 14 unions, 3 deaths; in 24 unions, 2 deaths; and in 30 unions, 1 death each was registered. The deaths referred to in this paragraph included deaths which were returned as from diphtheria, laryngeal diphtheria, and membranous croup. Deaths returned as from spasmodic croup were classified among diseases of the nervous system; and in cases where croup, or membranous laryngitis were returned as causes of death, further enquiry was made asking if the above conditions were due to diphtheria or otherwise.

Enteric Fever.—The diminished mortality from enteric fever is a gratifying feature of the figures presented in this report. The number of deaths from enteric fever registered in Ireland during the year 1908, is the lowest recorded since the particulars regarding this disease were first published in the report for the year 1869. In Table IX., on page xvi, it is seen that in the year 1898, the first year of the decade (1898-1907), there were 1,284 deaths from enteric fever registered in Ireland. The number fell to 769 in 1900, rising to 829 in 1901, declined year by year to 466 in 1904, rising to 502 in 1905, falling in 1906 and 1907 to 394 and 362, respectively, and again in the year under notice to 338 deaths. The fall from 1898 to 1908, was from 1,284 deaths in the former to 338 in the latter year, or in other words, where 38 persons died from enteric fever in 1898, there were but 10 deaths from the disease in 1908, a reduction in the mortality of 73 per cent. Of the deaths, only 12 were of children under the age of 5 years; there were 185 deaths between the ages of 20 years and 45 years. Of the total deaths, 195 were of males and 143 were of females.

In the unions which contain the county boroughs, the deaths from enteric fever were as follow:—In Dublin (North and South), 59; in Belfast, 44; in Cork, 18; in Londonderry, 8; in Limerick, 5; and in Waterford, one death, the total (135) of these unions constituting about 40 per cent. of all deaths in the whole of Ireland from the disease.

There were 19 deaths from enteric fever registered in the union of Lisburn (including 15 appertaining to Belfast); in Manorhamilton union, 9 deaths; and in each of Ballyshannon and Listowel unions, 8 deaths were registered.

TABLE XI.—Showing for the year 1908 the Deaths from the several forms of **Fever** at each Age-Period, with the proportion to the number of the living at each Age represented thereby.

* Formerly described as "Simple Continued Fever."

Diarrhœal Diseases.—During the decennial period, 1898–1907, the mortality from the conditions grouped under the above heading, ranged from 1,067 deaths in the year 1907, to 2,303 in the year 1899, the annual average for the period being 1,539. In the year 1908, now under notice, the number of such deaths was 1,199, a figure which corresponds to an annual rate of 0·27 per 1,000 of the estimated population of the country (the deaths of 18 persons stated to have been caused by diarrhœa due to food, are included in this total, and are also included in the poison table on page xxxvii, in which the number of deaths from food poison, and ptomaine poison is also contained). There were 900 deaths of children under 5 years of age included in the total, of which 498 were deaths of boys and 402 were deaths of girls. The deaths from diarrhœal diseases of infants under 5 years are 5·8 per cent. of the total deaths of children under 5 years of age registered during the year 1908.

In the aggregate the number of deaths from diarrhœal diseases registered in the unions containing the county boroughs was 698, corresponding to a rate of 0·63 per 1,000 of the combined populations of the above areas. The number of deaths from diarrhœal diseases in the remaining unions of Ireland was 501, which corresponds to an annual rate of 0·15 per 1,000 of the combined populations of these unions. Among the latter, 10 or more deaths were registered under this heading during the year in the following unions:—In Clonmel, 10; in Newtownards, 12; in Tralee, 12; in Ballymena, 14; in Listowel, 16; and in Rathdown union, 25 deaths from diarrhœal diseases.

In the following table, which I have reproduced from my Quarterly Report on Marriages, Births and Deaths in Ireland for the September quarter of the year 1908, the number of deaths from diarrhœal diseases registered, the mean temperature of the air, the mean of the earth temperature at 4 feet, the average number of hours of bright sunshine observed, and the average rainfall in the September quarters of the years 1904-1908 are given.

—	September Quarter of Year.	No. of Deaths from Diarrhœal Diseases.	Mean Air Temperature.	Mean Earth Temperature at 4 feet.	Bright Sunshine. No. of hours observed.	Rainfall in inches.

* See note (*) on page vii.

Cerebro-Spinal Fever.—As already stated in the general observations, page xiv, deaths from cerebro-spinal fever declined from 631 in the year 1907 to 127 in the year 1908. Of the total (127) there were 43 children under the age of 5 years; moreover, of the total, 79 were deaths of males and 48 were deaths of females.

The following table shows by sexes the unions in which the deaths were registered from cerebro-spinal fever during the year 1908 :—

UNION.	Total No. of Deaths.	Males.	Females.
Belfast, ...	38	21	17
Lisburn, ...	27*	16	11

* Including 23 deaths appertaining to Belfast.

Influenza.—There was an increase in the number of deaths from influenza registered in the year 1908, as compared with the year 1907; the number in the former year was 1,798, in the latter 1,720, and the annual average number of deaths in the decennial period, 1898-1907, was 1,796, being only 2 below the number registered in the year 1908. There was a considerable fluctuation between the number of deaths registered year by year during the decennial period; in the year 1906 the lowest number (978), and in the year 1900 the highest number (4,677) was recorded. Turning to the abstracts it may be seen that there were 854 deaths of males and 944 deaths of females included in the total; the former figure represents a rate of 0·39 per 1,000 of the estimated number of living males, and the latter a rate of 0·43 per 1,000 of living females in the population. It will also be seen that in no age-period do the people escape the ravages of this disease; the most fatal age-period both for males and females appears to be that between 65 and 75 years of age. The mortality from this disease is widely distributed over the country; however, in 7 out of the 159 poor law unions of Ireland there was no mortality from influenza recorded, namely :—In Ballymoney, Bawnboy, Dungarvan, Killala, Kilmacthomas, Kinsale, and Middleton. In 87 unions deaths from influenza varied from 1 to 9; in 38 unions from 10 deaths to 19; in 14 unions, the deaths numbered 20 or under 30; in 9 unions the deaths were 30 or under 40, these being Castlereagh, Coleraine, Downpatrick, Dungannon, Inishowen, Limerick, Lurgan, Newry, and Rathdown. In Banbridge union, 50 deaths from influenza were registered; in Belfast union, 54; in South Dublin union 64; and in North Dublin union, 90.

In Table XII., page xxii, a table is given showing by provinces and counties, by sexes and by age-periods, the mortality from influenza during the year 1908. In Leinster the rate representing the deaths from influenza was 0·48 per 1,000 of the census population in 1901, the highest county rate being in Queen's County (0·77 per 1,000), and the lowest in Kildare, 0·28 per 1,000; in Munster the general rate was 0·33 per 1,000, the highest county rate being 0·74 per 1,000 in Tipperary, N.R., and the lowest (0·16 per 1,000) in each of the counties of Kerry and of Waterford; in Ulster the general rate was 0·41 per 1,000, the county rate ranging from 0·67 per 1,000 in Donegal to 0·13 in Belfast county borough; and in Connaught the general rate was 0·37; in the county Roscommon there was a rate of 0·54 and in Mayo 0·26 per 1,000, being the highest and lowest county rates, respectively, in Connaught.

Rabies (*Hydrophobia*).—Subsequent to the year 1898 there has been no recorded death from hydrophobia in Ireland; in that year 4 such deaths were registered.

Puerperal Septic Diseases.—Under the heading of puerperal septic diseases, the deaths appearing in the abstracts as from puerperal septicæmia, puerperal pyæmia, phlegmasia dolens, and *puerperal fever*, are grouped. The deaths from all the above conditions numbered 189; in the preceding year the corresponding figure was 163; both these figures show a decline in comparison with the mortality of previous years, the deaths in 1908 being 28 below the average for the 10 years, 1898 to 1907. This subject will be again noticed in the paragraph which deals with the mortality from accidents and diseases in relation to childbirth. The deaths from puerperal septic diseases registered in 1908 are shown by age-periods in the following table :—

TABLE XIII.—Deaths of Women in Ireland in 1908 definitely returned as either caused by or associated with Pregnancy or Childbearing.*

* These deaths are included in the general tables of Causes of Death.

Septicæmia, &c.—Besides 78 deaths from septicæmia (of males 47 and of females 31) there were 94 deaths from erysipelas, 24 from pyæmia, 79 from *phlegmon, carbuncle,* 3 from phagedæna, and 25 classified to other infective processes.

Pneumonia.—Under the general heading pneumonia, which includes lobar pneumonia, broncho-pneumonia, epidemic pneumonia, and *pneumonia* (not defined), no less than 4,116 deaths were classified for the year 1908. This figure, which corresponds to an annual death rate of 0·94 per 1,000 of the population, constitutes over 5 per cent. of the total mortality of Ireland for the year, and is above the annual average for the preceding decade. The mortality from pneumonia in 1908 is higher than that in any one of the years included in the decade referred to.

Of the total deaths, 205 were from lobar pneumonia (128 of males and 77 of females); 1,472 were from broncho-pneumonia (753 of males and 719 of females); and 2,438 deaths were returned from *pneumonia* (not defined), 1,410 being those of males, and 1,028 of females. Of the deaths, 1,743 occurred in the unions containing the county boroughs as follows:—In Belfast, 761 deaths; in Dublin (North and South), 646 deaths; in Cork, 157; in Limerick, 94; in Londonderry, 51; and in Waterford, 34 deaths were registered. The total, 1,743, represents an annual rate of 1·57 per 1,000 of the aggregate population of the above unions; the rate for pneumonia (all forms) in the remainder of Ireland being 0·73 per 1,000 of the population. In the abstracts it may be seen that, of the deaths (205) from lobar pneumonia, 24 (of males, 15, and of females, 9) were of children under 5 years of age, and that, of 1,472 deaths from broncho-pneumonia, 893 (of males, 459, and of females, 434) were of children under the age of 5 years.

TUBERCULOSIS.

It is my pleasing duty to have the honour of reporting to your Excellency the fact that the rate of mortality per 1,000, from all forms of Tuberculosis, declined during the year 1908 to 2·6, the corresponding figure for the three years, 1905, 1906, and 1907, being 2·7.

When the actual numbers are taken, it appears that, as compared with the mortality of the previous year, there were 386 fewer victims to the ravages of the disease, which is a matter for much congratulation. A further satisfactory feature, moreover, is that the decline is observable in the pulmonary cases, which number 8,511, as compared with 8,828 in 1907.

I earnestly trust that this may be the beginning of a gradual fall in the death-rate from this terrible malady, and that the magnificent Anti-Tuberculosis Campaign, inaugurated and carried on, through the agency of the "Women's National Health Association of Ireland," by Her Excellency The Countess of Aberdeen, has begun to tell on the mortality records of our island. The Tuberculosis Exhibitions, held under the auspices of Her Excellency, in almost all its large towns, and the Tuberculosis Vans which, under Her direction, have travelled through many of the rural districts, have instructed the people as to the infectious nature of the disease, and the means of protecting themselves from its ravages, and evidences are not wanting that the lessons thus inculcated are bearing fruit, and that, in many places, there has been a material change for the better amongst our people, in their habits and surroundings.

Amongst the recent reports from the Registrars, regarding the sanitary state of their districts, I find the following:—

One Registrar states:—"There is a great improvement with regard to cleanliness in dwellings. People are beginning not to be frightened of fresh air."

From another district I received the following:—"The Registrar has much pleasure in notifying that the people seem to be awakening to the fact that the inroads of that terrible malady (Tuberculosis) may be lessened by the timely adoption of suitable measures."

From another district it is reported:—"Sanitary state greatly improved, and the houses as a rule kept clean and well ventilated."

Another Registrar remarks:—"A branch of the Women's Health Association has been established here and the members of its Committee are doing useful and good work in visiting the neighbouring cottagers and explaining to them the value of fresh, pure air."

These are only a few out of many evidences of the beneficent work carried on by Her Excellency, the details of which were presented to the International Congress held in Washington in September and October, 1908, when one-half of the Grand Prize of 1,000 dollars was awarded to "The Women's National Health Association of Ireland, for evidence of effective work in the prevention and relief of Tuberculosis, by a Voluntary Association since 1905."

That such success has crowned Her efforts must be peculiarly gratifying to Her Excellency, who has the additional satisfaction of seeing the noble example she has set, followed by the holding of similar Tuberculosis Exhibitions in London and throughout England. It further appears that a campaign, on the same lines, is being organized in Berlin.

Of the total deaths from all forms of tuberculous disease, 5,568 were of males, and 5,725 were of females. In the opening remarks I alluded to the diagrams which are contained in this Report; of these, three are concerned in whole or in part with the subject of Tuberculosis.

Diagram No. 2, facing page xiii, shows the 22 principal causes of death for the year 1908 in vertical columns, the highest of these, towering above all others, denoting the mortality from all forms of tuberculous disease.

In Diagram No. 3, facing this page, a comparison is instituted between the mortality from tuberculosis in England and Wales and Scotland from the year 1864 to the year for which the latest figures are available. This diagram shows that in 1864 in England and Wales the rate was 3·3 per 1,000, and in the year 1907 it was 1·6 per 1,000; it also shows that in Scotland, in 1864, the rate was 3·6 per 1,000, and in 1907 it had fallen to 2·1 per 1,000, and in Ireland the rate, which in the first year of the period was 2·4 per 1,000, was 2·6 per 1,000 in the year 1908, having declined to this from the rate of 2·7 per 1,000, representing the mortality from tuberculous disease in Ireland, in each of the years 1905, 1906, and 1907.

In Diagram No. 4, facing page xxvii, an attempt has been made to supply information regarding the mortality among males and females from all forms of tuberculous disease in Ireland for the year 1908, with reference to their conjugal condition. A special tabulation was undertaken for obtaining the information which is afforded by this diagram. A comparison of the death-rates of unmarried, married, and widowed males from all forms of tuberculous disease shows that among unmarried males of 15 years of age and upwards the death-rate was 3·54 per 1,000 of the 1901 Census population. Among the widowed it was 2·94, and among married males the rate was 2·07 per 1,000.

For females of 15 years of age and upwards the highest rate was among the unmarried, namely, 3·26 per 1,000; next come the married, with a rate of 2·70 per 1,000, while the rate for widowed females was 1·61 per 1,000.

A comparison of the death-rates between males and females, who are included in this research, namely, the unmarried, the married, and the widowed, shows that in the aggregate the death-rate of unmarried males, 15 years of age and upwards, is somewhat higher than that of unmarried females at the same ages, namely, 3·54 per 1,000 for males, and 3·26 per 1,000 for females; in the cases of married males and females, the rate for males is 2·07 per 1,000, while that for females is considerably higher, namely, 2·70 per 1,000, and lastly, among the widowed, the rate for males is considerably higher than that for females.

TUBERCULOSIS.

DIAGRAM No. 3.—Showing the Death-Rate in Ireland, as compared with England and Scotland, during each of the forty-five years 1864-1908.

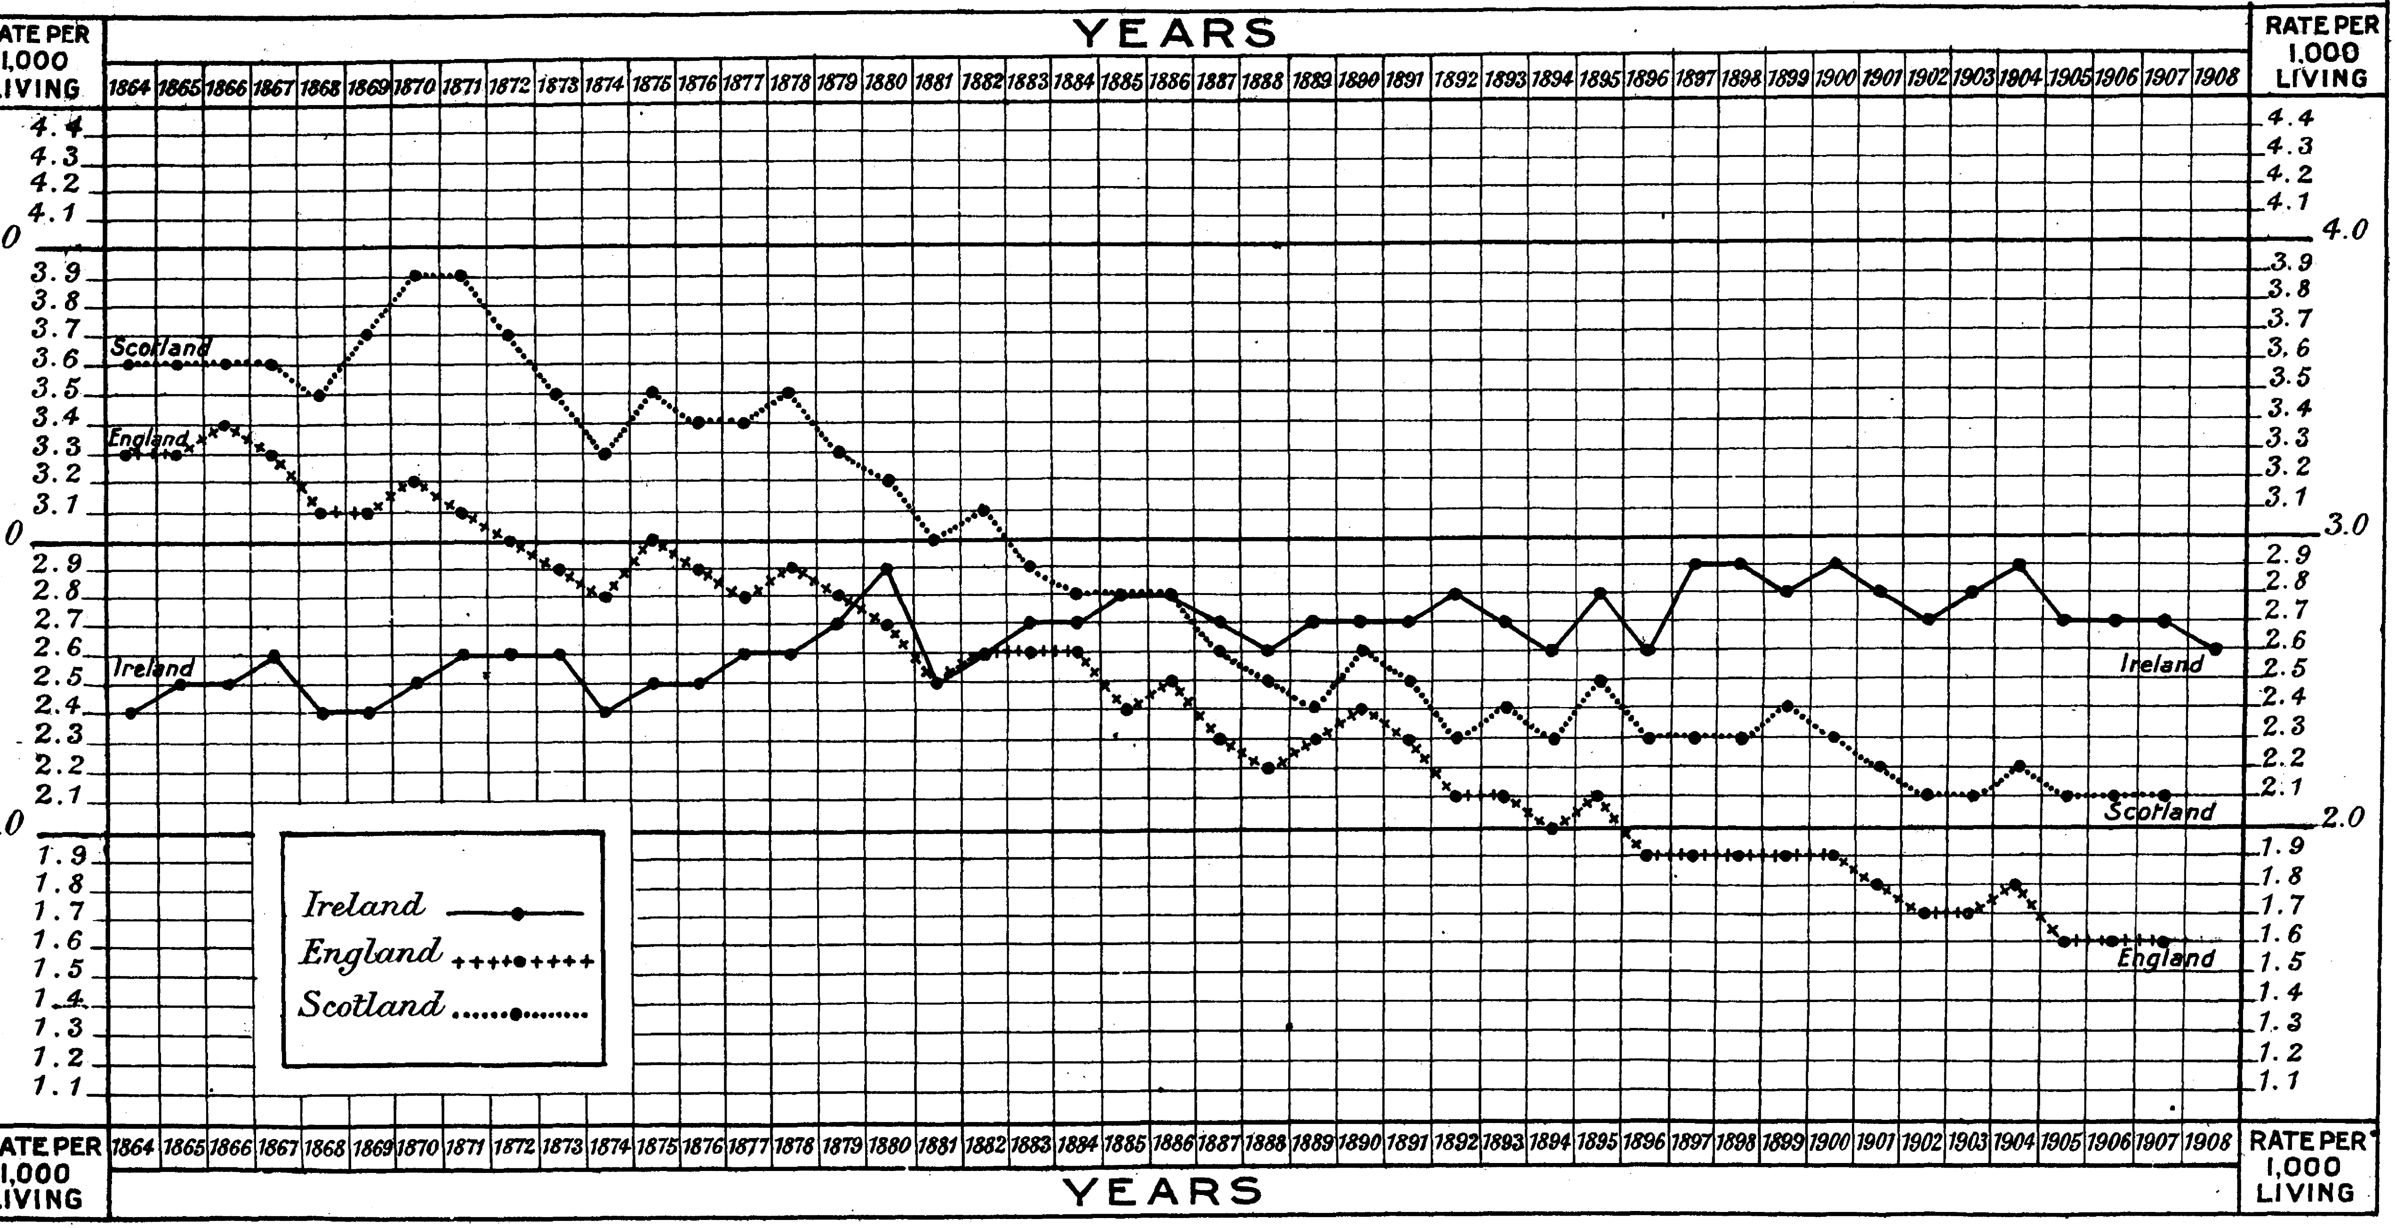

DIAGRAM No. 4.—Showing for Ireland the Death-rate in the Year 1908 from All Forms of Tuberculous Disease, by Sexes, Age-Periods, and Conjugal Condition.

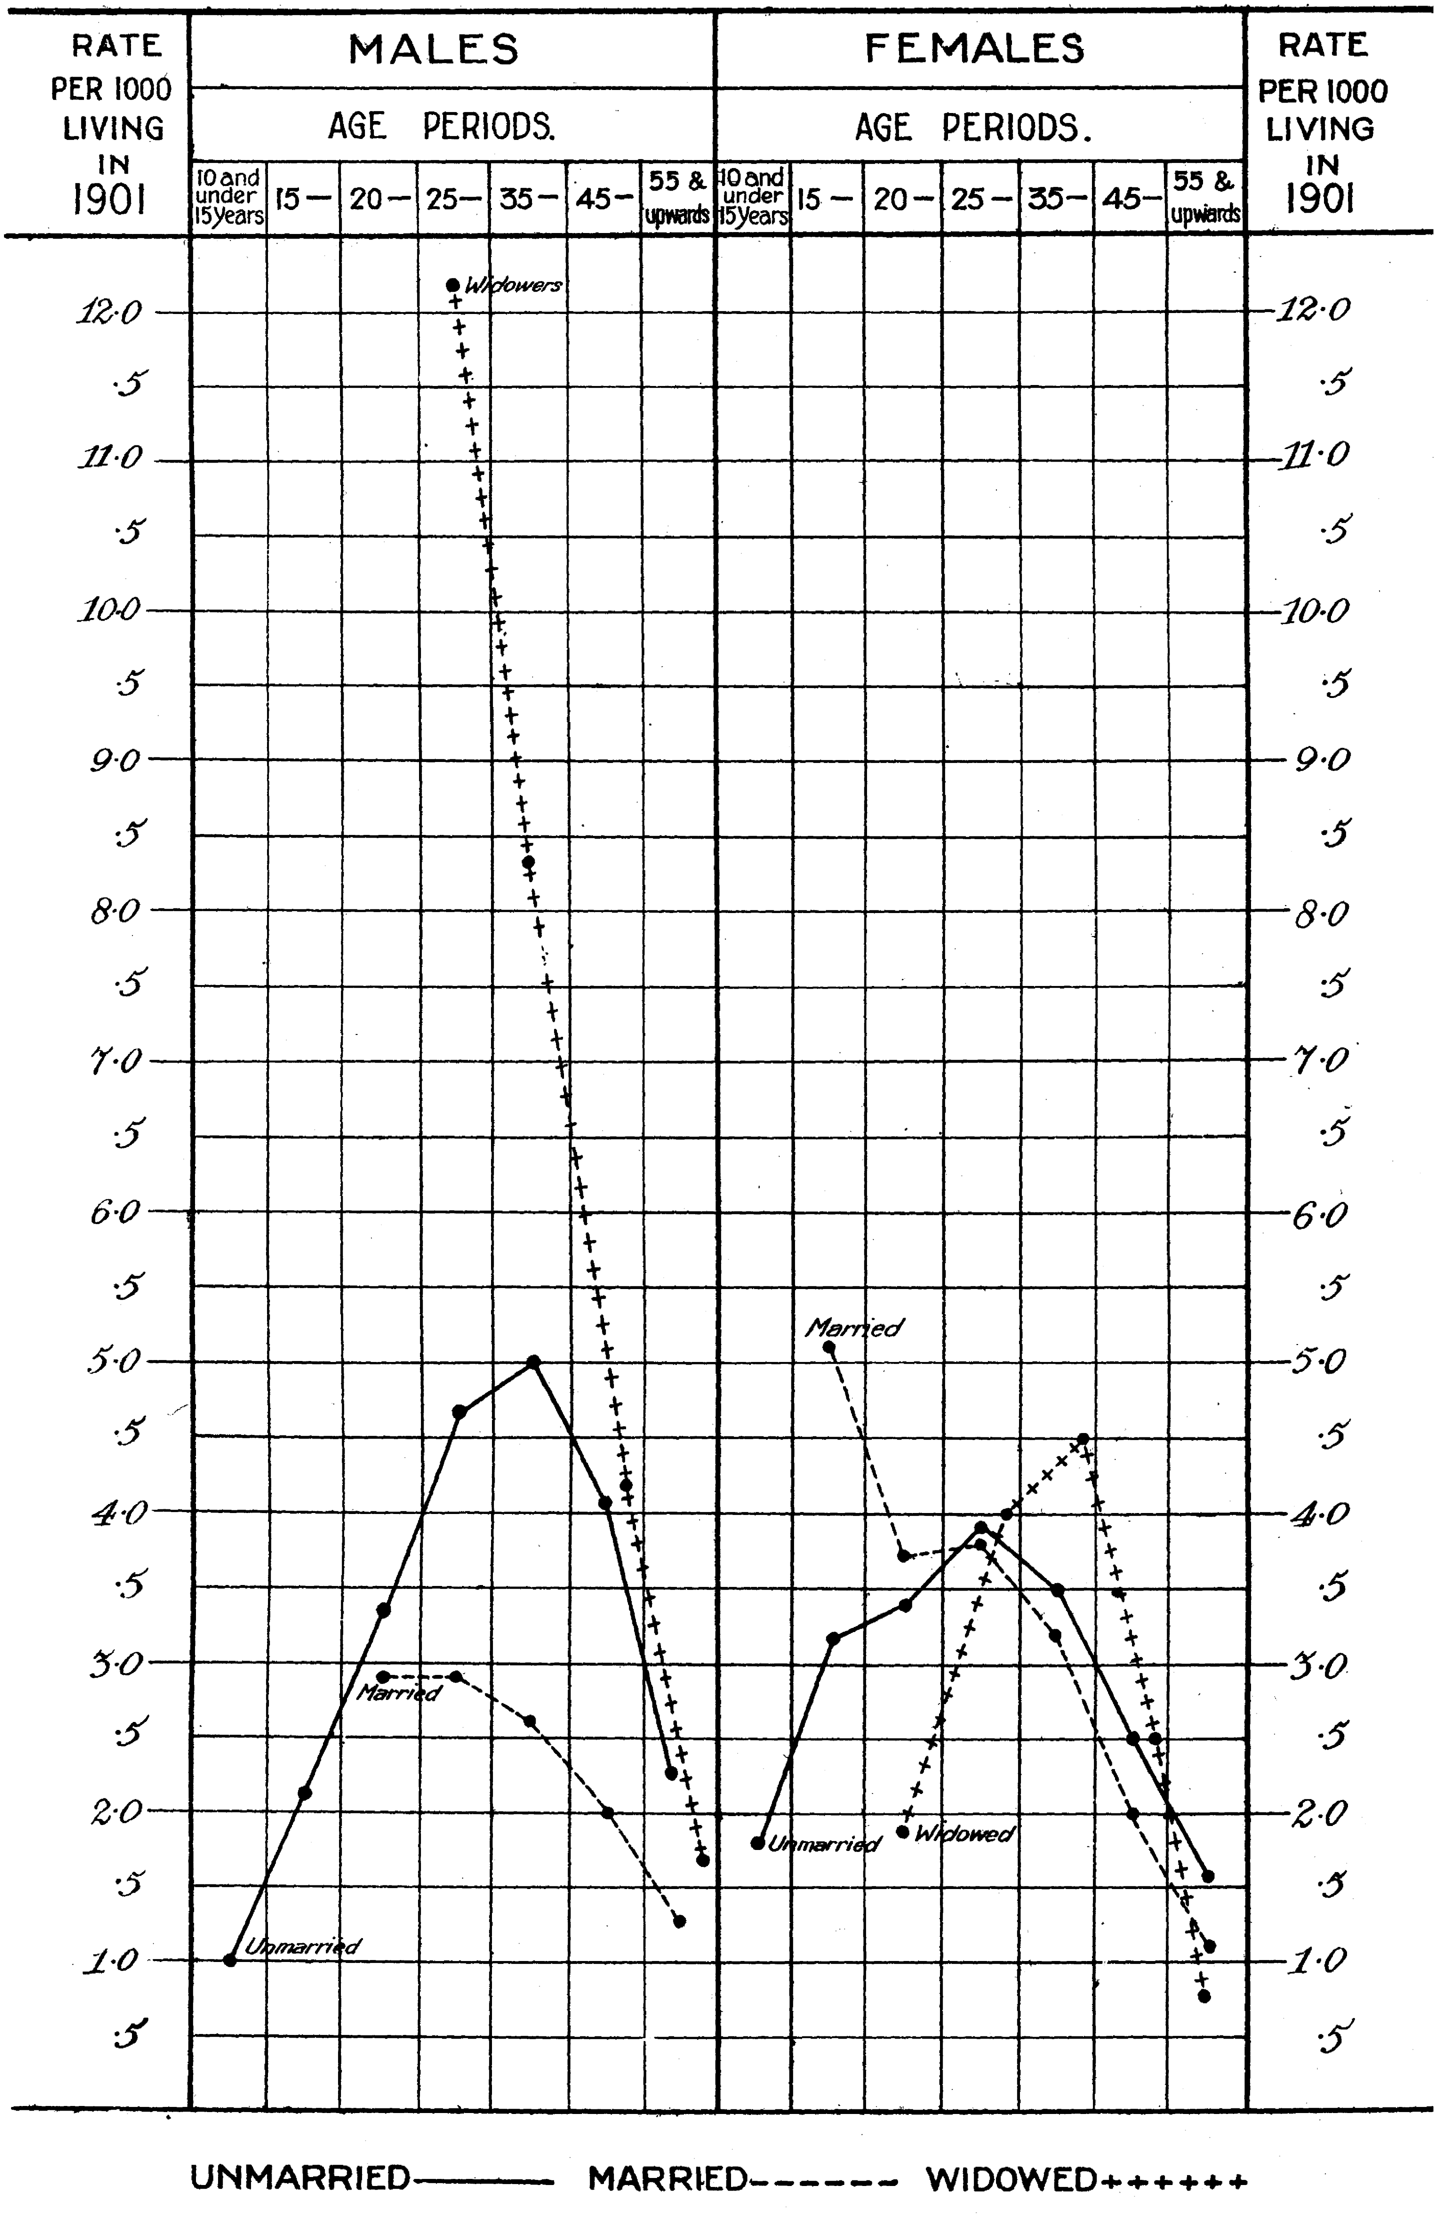

(To face page)

The following table shows the results regarding conjugal condition in conjunction with sex and age-periods obtained by this tabulation :—

TABLE showing by conjugal condition, by sexes, and by certain age-periods, the death-rate from all forms of tuberculous disease per 1,000 of the population represented thereby, according to the Census of 1901.

Age-Periods.	MALES.			FEMALES.

Total 15 years and upwards.	3·54	2·07	2·94	3·26	2·70	1·61

In the abstracts, commencing on page 120, the details regarding the number of deaths from the different varieties of tuberculous disease, by ages and sexes, will be seen ; also the deaths by provinces, counties, and unions from the different forms of tuberculous disease are given.

Tuberculous Phthisis (*Phthisis*).—As already stated, a reduction of 386 deaths from all forms of tuberculous disease, as compared with the year 1907, was found to have occurred in the year 1908. This reduction affected the deaths from tuberculous phthisis (*phthisis*) by 317 (or 82 per cent.), and the deaths from other forms of tuberculous disease by 69 (or 18 per cent. of the total reduction). The rate for tuberculous phthisis (*phthisis*) in 1907 for males and females at all ages was 2·02 per 1,000, and in 1908 the corresponding rate was 1·95 per 1,000 ; for males, in 1907, the rate was 2·01, and in 1908 it was 1·91 per 1,000 ; and for females, in 1907, the rate was 2·02, and in 1908 it was 1·98 per 1,000. The highest death-rate, both for males and for females, occurred in the period between the ages of 25 and 35 years, both in the years 1907 and 1908 ; in the former year the rate for males was 4·20 per 1,000, and for females it was 3·74 per 1,000, and in the latter year now under notice it has declined to 3·78 per 1,000 for males, and to 3·56 for females between the ages of 25 and 35 years. In the following statement the total deaths from tuberculous phthisis are given by ages and by sexes :—

Age-Periods.	Deaths from Tuberculous Phthisis (*Phthisis*) in Ireland.					
	Total of both Sexes.		Of Males.		Of Females.	
	Number.	Rate per 1,000.	Number.	Rate per 1,000.	Number.	Rate per 1,000.
0–5 years, ..	190	0·44	103	0·46	87	0·41
5–10 „ ..	119	0·27	49	0·22	70	0·32
10–15 „ ..	319	0·71	87	0·38	232	1·06
15–20 „ ..	1,026	2·21	405	1·75	621	2·68
20–25 „ ..	1,327	3·05	641	2·99	686	3·10
25–35 „ ..	2,361	3·67	1,196	3·78	1,165	3·56
35–45 „ ..	1,546	3·27	781	3·39	765	3·15
45–55 „ ..	908	2·24	474	2·47	434	2·03
55–65 „ ..	491	1·43	282	1·69	209	1·18
65–75 „ ..	191	1·02	114	1·20	77	0·84
75 and upwards, ..	33	0·36	20	0·44	13	0·28
Total all ages, ..	8,511	1·95	4,152	1·91	4,359	1·98

From this table it appears that the total death-rate for males was somewhat lower than that for females, and that between the ages of 5 years and 25 years there was a preponderance of deaths of females, but that in the higher age-periods the deaths of males exceeded those of females.

Certain information is presented in the table which follows regarding the mortality from tuberculosis among the several social classes in the Dublin Registration Area for the year 1908.

Class.	Occupation or Social Position.	Annual Rate for the Dublin Registration Area, per 1,000 of the Population in 1901 represented by the Deaths registered in 1908 from		
		All Forms of Tuberculous Disease.	Tuberculous Phthisis (*Phthisis*).	Other Forms of Tuberculous Disease.

	17. Hawkers, Porters, Labourers, &c., ...	5·18	2·92	2·26

The figures in the foregoing table show generally that as the social condition descends the scale, the mortality from tuberculous disease increases.

Tuberculous Meningitis.—In the process of classification of deaths by causes, 810 deaths were found to have been caused by tuberculous meningitis and 16 by acute hydrocephalus—a total of 826 deaths, corresponding to a rate of 0·19 per 1,000 of the population. Of the total deaths, 424 were under the age of 5 years; between the ages of 5 years and 10 years, 158 deaths were registered; and between the ages of 10 years and 15 years, 103 deaths were registered. Of the total, 429 were deaths of males and 397 were deaths of females, corresponding to the rates of 0·20 and 0·18 per 1,000, for males and for females, respectively.

Tuberculous Peritonitis.—Under this heading, deaths from tuberculous peritonitis and from *tabes mesenterica* are included; such deaths numbered 481 in the year under notice, namely, 284 deaths from tuberculous peritonitis and 197 deaths from *tabes mesenterica*; the total corresponds to an annual rate of 0·11 per 1,000 of the population, that for males being 0·10 and for females 0·12 per 1,000 of the respective male and female populations of Ireland, estimated to the middle of the year 1908. Of the total (481) there were 236 of children under 5 years of age. The deaths of males at all ages numbered 219, and there were 262 deaths of females.

Other Forms of Tuberculous Disease.—These include 8 deaths from lupus (one of a male and 7 of females); 540 deaths from disease of other organs or parts of the body (of males 294 and of females 246); 899 deaths which were returned as general tuberculosis or tuberculous disease, not otherwise defined (of males 461 and of females 438), and 28 deaths in which the term *scrofula* or *struma* was used to designate the cause of death. (The use of the two latter terms in medical certificates should be avoided.) In the aggregate, deaths under this heading were 1,475 in number, and represented a rate of 0·34 per 1,000 of the estimated population of Ireland.

Further details relating to the ages at death, the sexes of the persons, and the unions, counties and provinces in which the deaths were registered, will be found in the abstracts appended to this report.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Tuberculous Phthisis (*Phthisis*), Tuberculous Meningitis, Tuberculous Peritonitis and *Tabes Mesenterica*, Other Forms of Tuberculous Disease and *Scrofula* and from all causes, registered in Ireland in each of the thirty-eight years, 1871-1908, with the Rate per 1,000 of Estimated Population represented by (*a*) Deaths from the above-mentioned forms of Tuberculosis, (*b*) Deaths from All Causes; and the percentage of total Deaths caused by the tuberculous diseases referred to.

Alcoholism.—Before the year 1902, deaths from alcoholism were assigned to (1) delirium tremens, or to (2), chronic alcoholism, but neither before that year nor since do the figures presented year by year correctly represent the mortality resulting from the misuse of alcoholic beverages; moreover, many persons die of local diseases that are caused by alcoholic indulgence. From the beginning of the year 1902, deaths which have been caused by accident or negligence of persons stated to have been under the influence of alcohol have been referred to alcoholism, deaths occurring in this manner having previously been counted among the deaths from accidental causes. In the year 1908 the number of such deaths was 19 (of males, 14, and of females, 5), and the total number of deaths from alcoholism, including the latter, was 152, as against 221 deaths in the year preceding. Notwithstanding the fact that the mortality from alcoholism is understated owing to the causes referred to, the relatively large decrease in the year under notice, as compared with the year 1907, must be looked on as a favourable index of an increasing tendency of the nation to sobriety, as the factors which affect the general accuracy of these figures, as above stated, have been constant in previous years, and do not affect one year of the period (1901–1908) more than another.

Of the deaths, 122 were of males, and 30 were of females, as against 180 deaths of males, and 41 of females registered in the year 1907.

The deaths of 4 persons from acute alcoholic poison are not included in the deaths from alcoholism, but appear under the head of poison in the general abstracts, and are detailed in the poison table, which is printed on page xxxvii.

Rheumatic Fever, Rheumatism, &c.—The deaths attributed to rheumatic fever, acute rheumatism, *rheumatism of heart*, chronic rheumatism, rheumatic arthritis, *rheumatic gout*, in the aggregate, numbered 763. Of these, 91 males and 70 females were victims to rheumatic fever, acute rheumatism; 21 males and 37 females to *rheumatism of heart*; 179 males and 260 females to chronic rheumatism; and 41 males and 64 females to rheumatic arthritis, *rheumatic gout.*

Gout.—Of the deaths registered (13 in number) 11 were of males, and 2 were of females.

MALIGNANT DISEASE.

As a result of the detailed classification, it appears that the total number of deaths which were attributed to malignant disease was 3,314, equal to a rate of 0·76 per 1,000 living. Of this number, 1,527 were deaths of males (equal to a rate of 0·70 per 1,000 living) and 1,787 were deaths of females (equal to a rate of 0·81 per 1,000 living). The above total for males includes 476 deaths from carcinoma, 88 from sarcoma, and 963 returned as from cancer, malignant disease (undefined), and the total number of deaths of females from malignant disease, includes 608 deaths from carcinoma, 63 from sarcoma, and 1,116 from cancer, malignant disease (undefined).

In Table IX. it may be seen that the cancer death-rate in 1906 was 0·793 per 1,000 of the population of Ireland, being the highest annual rate ever recorded for Ireland; in 1907 it declined to 0·762, and in the year 1908, now under notice, the recorded rate was 0·758 per 1,000. As by far the largest number of deaths from malignant disease occurs in the later years of life, it is usual in making rates for this condition to eliminate the deaths of persons under 35 years of age. In Table XV., the deaths from cancer, by sexes and age-periods, are arranged according to the part affected; the rates are also given by sexes for the different age-periods, and it may be seen that for males the highest rate appears to have obtained among those aged 75 years and upwards, namely, 4·65 per 1,000 males living at this age-period, and among females the age-period from 65 years to 75 years affords a rate of 4·83 per 1,000 of women living at this age-period; above 75 years, among females, the rate was 4·28, being below that of males at the same age-period.

In the abstracts, particulars will be found with reference to the provinces, counties, and unions, and the number of deaths from malignant disease which were registered therein.

The following statement gives information respecting deaths which were caused by tumours, and the parts affected thereby (not including deaths from tumours of the brain, uterus, or ovary). In all these cases the tumours were not malignant, or further information concerning their nature was not forthcoming. These deaths numbered 52, of which 16 were deaths of males, and 36 were deaths of females.

Statement showing the parts affected by the Tumours which caused the deaths of 16 males and 36 females.

Diabetes.—There were 357 deaths attributed to diabetes; of this number, 200 were of males, and 157 were of females; in the 4 years preceding, deaths from diabetes numbered 359, 308, 340, and 316, respectively.

DISEASES OF SPECIAL ORGANS.

On page 120 the provisional grouping of diseases is shown; under group B the deaths from the diseases of special organs or parts are arranged. Of these, there are 12 divisions, namely, I.—diseases of nervous system; II.—diseases of organs of special sense; III.—diseases of heart; IV.—diseases of blood vessels; V.—diseases of respiratory system; VI.—diseases of digestive system; VII.—diseases of lymphatic and ductless glands; VIII.—diseases of urinary system; IX.—diseases of generative system; X.—diseases of pregnancy and childbirth; XI.—diseases of locomotor system; and XII.—diseases of the skin. In the aggregate, deaths arranged in the 12 divisions of group B numbered 32,434, being about 42 per cent. of all deaths registered during the year 1908. In the following paragraphs the principal numerical facts in reference to deaths in the above divisions will be brought under notice.

Meningitis.—To inflammation of the brain or its membranes the deaths of 760 persons (416 males and 344 females) were attributed. In the year 1907, deaths from meningitis numbered 699. Of this figure, 369 were deaths of males and 330 were deaths of females. Of the total deaths in the year 1908, there were 326 of children under 5 years of age, the latter figure including 135 deaths of infants under one year of age.

Softening of the Brain.—It appears from the abstracts that 174 persons (90 males and 84 females) were stated to have died from softening of the brain. The mortality from this condition is more pronounced after the age of 55 years is reached; for out of the total deaths only 28 were deaths of persons under 55 years of age.

General Paralysis of the Insane.—The deaths from general paralysis of the insane, which were 80 in number, are 8 less than in the year 1907, but 13 more than in the year 1906. Of the 80 deaths, 61 were of males and 19 were of females.

Epilepsy.—An increase of 35 deaths from epilepsy over the number registered in the year 1907 appears to have occurred, the total for 1908 being 343. Of this figure, 169 were deaths of males and 174 were deaths of females. Of the total, 12 deaths were registered of children under the age of 5 years.

Convulsions.—That such a large number of deaths as 1,318 are attributed to *convulsions* as the cause, is a matter for consideration, as the term *convulsions* denotes a symptom, not a diseased condition, and may be produced by many causes. Moreover, the great majority of the deaths from *convulsions* are of children, no less than 1,088 of the total being deaths of infants under one year of age, and constituting 11·0 per

* Including Carcinoma, Sarcoma and Cancer, Malignant Disease.

cent. of all deaths of infants under one year of age. There is no doubt a considerable difficulty in the diagnosis of disease in young infants even under favourable circumstances, but under the circumstances attendant on practice carried on among the poor in crowded urban areas, the difficulties are intensified, and consequently the rendering of effective medical assistance to infants and young children is very great. It is, however, a matter of interest, and a forecast of improvement of a permanent character that the deaths returned from *convulsions* of infants under one year of age decreased from 1,151 in 1907 to 1,088 in 1908.

Locomotor Ataxy.—The decedents from locomotor ataxy, numbering 40, were persons aged 25 years or upwards, the ratio of the deaths of males to those of females being as 3 to 1. In the year 1907, there were 52 deaths from this disease recorded.

Neuritis, Peripheral, Poly-neuritis.—There were 30 deaths—12 of males and 18 of females—attributed to either neuritis, peripheral neuritis, or poly-neuritis as the cause. In the year 1907, there were 34 deaths included in this group.

Tumour of Brain.—Under the heading of malignant disease a table showing the deaths from tumour is given, which does not include tumours of brain, uterus, or ovary, which are classed separately among the diseases of special organs, in the process of tabulation. From the year 1906, particulars of the deaths from tumour which in previous years were included with the diseases of the organ or part affected by the tumour, are now taken out separately, and an enquiry is made of the Medical Practitioner who certified the death, asking for further information regarding the nature of the tumour. If the reply states that the tumour be malignant, syphilitic, or tuberculous, it is assigned to its appropriate cause, and if no further information be obtained, the death is included among the undefined tumours. See tabular statement on page xxxi.

There were 50 enquiries made regarding the nature of the brain tumour given as the cause of death; these resulted in 17 deaths being classified as follows:—One to carcinoma, 7 to sarcoma, 3 to cancer (undefined), 4 to tuberculous disease, and 2 to syphilis.

Diseases of the Heart.—Of the total deaths from all causes registered during the year 1908, there were 9,020 classified to one or other of the diseases of the heart which are shown in the abstracts. In this connection it may be observed that deaths which are stated to be due to *heart failure,* in default of further information, are tabulated to heart disease, and when *heart failure* is given as a primary cause of death, it is customary to issue a query, asking whether the *heart failure* is due to a diseased condition of that organ, or is secondary to some other condition or form of disease. The deaths in the aggregate attributed to diseases of the heart represent a rate of 2·06 per 1,000 of the estimated population, being nearly 12 per cent. of the total deaths from all causes registered. The total (9,020) includes the deaths of 4,401 males and 4,619 females; of the former figure, 1,083, and of the latter, 1,195, were definitely stated to have been caused by valvular heart disease, or by endocarditis; and of the total deaths of males and females, there were 28 from pericarditis, 22 from hypertrophy, 82 from angina pectoris, 250 from dilated heart, and 286 from fatty heart. To *syncope, heart disease,* including *heart failure,* 6,074 deaths were attributed.

Diseases of Blood Vessels.—The rate represented by the deaths classified to diseases of the blood vessels was 0·74 per 1,000, the deaths from those diseases numbering 3,246; the total includes 1,344 deaths (of males 615, and of females 729) from cerebral hæmorrhage, cerebral embolism; 1,558 (of males 701, and of females 857) from *apoplexy, hemiplegia*; 53 (of males 43, and of females 10) from aneurysm; 172 (of males 85, and of females 87) from senile gangrene; 23 (of males 5, and of females 18) from embolism, thrombosis (not cerebral); 21 (of males 9, and of females 12) from phlebitis; 10 (of males 6, and of females 4) from varicose veins; and 65 deaths of males and females from other diseases of blood vessels.

Where *paralysis* is given as the certified cause of death without further qualification, it is deemed necessary to issue a query asking for further information. In the process of classification for the year under notice 125 such queries were issued.

Laryngitis, and Croup.—Among the deaths from diseases of the larynx and of the trachea, there were 135 from laryngitis, 11 from *membranous laryngitis* (not diphtheritic), 118 from *croup,* not spasmodic nor membranous, and 8 deaths from other diseases of the larynx and trachea. In the total, the above deaths were 272 in number, as compared with a total of 264 deaths for the similar group of diseases in the year preceding.

Bronchitis, &c.—The great preponderance of the deaths from diseases of the respiratory organs is caused by bronchitis, as may be gathered from the abstracts. Of the total deaths (9,178) from diseases of the respiratory system, 7,873 were caused by bronchitis, this latter number representing a rate of 1·80 per 1,000 of the estimated population. Besides the 272 deaths from laryngitis, &c., above referred to, and the 7,873 deaths from bronchitis (of males, 3,707, and of females, 4,166) there were 411 deaths from emphysema, asthma; 149 from pleurisy, 36 from fibroid lung disease, and 437 deaths from other diseases of the respiratory system.

Pleurisy.—The 149 deaths from pleurisy include 10 deaths from empyema concerning which information as to the cause was not available. Of 149 deaths from pleurisy registered during the year 1908, there were 81 of males and 68 of females.

The following table gives the result of the queries regarding deaths stated to be due to empyema during the years, 1904–1908. From this it may be seen that, of 144 deaths, 62 were stated to have been associated with tuberculous disease.

Table showing for the years, 1904-1908, by age-periods, the diseases or causes with which the deaths directly attributed to Empyema of 144 persons (110 males and 34 females) were associated.

Diseases or causes (by Age-Periods) with which 110 Deaths of Males from Empyema were associated.

Gastric Ulcer.—The mortality from gastric ulcer, which had been 300 in the year 1906, and 295 in the year 1907, was 333 in the year under notice; of the latter figure, 15 were deaths originally returned as from *peritonitis*, which were changed to the proper heading "gastric ulcer," on the receipt of the replies to the queries asking for further information. Of the total deaths, 150 were of males and 183 were of females.

Appendicitis.—During the year under notice the deaths of 136 persons from appendicitis were registered, 76 being deaths of males and 60 deaths of females; the total number is 16 above the number registered in the previous year, namely, 120, and equal to the number registered in 1906, which was 47 over the number registered in the year 1905. The total includes 15 deaths primarily returned as from *peritonitis.*

Peritonitis.—As the result of querying, the deaths finally tabulated to peritonitis numbered 113 (of males 51 and of females 62) as compared with 115 in 1907, with 128 in 1906 (the first year in which peritonitis, where given as a primary cause of death, became the subject of inquiry for further information) and with 296 in the year 1905. Prior to 1906, queries were only issued when peritonitis was given as the cause of deaths of married women during the child-bearing ages. The changes that were necessitated caused 117 deaths originally assigned to peritonitis to be re-tabulated. Among the deaths which were re-tabulated there were 26 added to intestinal obstruction, 15 to gastric ulcer, 15 to appendicitis, 13 to tuberculous peritonitis, 9 to violence, and 6 to puerperal septic conditions.

Cirrhosis and other diseases of the Liver.—In the abstracts it may be seen that 353 deaths were tabulated to cirrhosis of the liver, and the number tabulated to other diseases of the liver and gall bladder (not including malignant diseases, syphilitic, tuberculous disease, or parasitic) was 338, the total being 691. Of the 353 deaths from cirrhosis of the liver, 233 were deaths of males and 120 were deaths of females. Referring to the remarks regarding the mortality statistics from alcoholism, it is probable that the deaths from cirrhosis of the liver and many of those included in other diseases of the liver and gall bladder were due to over-indulgence in alcoholic beverages.

Acute Nephritis, Chronic Nephritis, &c.—To diseases of the urinary system, in the aggregate, the deaths of 2,086 persons (1,342 males and 744 females) were attributed; this number is equivalent to a rate of 0·48 per 1,000 of the estimated population, the average rate for the decennium, 1898–1907, being 0·41 per 1,000. The total includes the deaths of 227 males and 211 females from acute nephritis; 636 males and 476 females from chronic nephritis; 9 males and 6 females from calculus; 388 males and 30 females from diseases of the prostate or bladder; and 82 deaths of males and 21 of females from other diseases of the urinary system. The figures for acute and chronic nephritis include the deaths of 13 from the former and 5 from the latter which were associated with pregnancy or childbearing.

Tumours and other diseases of the Ovary and Uterus.—In the group of diseases to which deaths were attributed under this heading were 52 deaths from *ovarian tumour* and 39 from *uterine tumour.* All these tumours were stated in the medical certificates to be non-malignant or the results of querying for further information revealed the fact that they were either non-malignant or that their pathological nature could not be ascertained. In addition to the above there were 10 deaths from other diseases of the ovary, 11 from other diseases of the uterus, 7 from disorders of menstruation, and 17 deaths of females from other diseases of the generative and mammary organs. In Table XV. it may be seen that there were 25 deaths from malignant diseases of the ovary and 236 from malignant disease of the uterus registered during the year.

Diseases or Accidents of Pregnancy or of Childbirth.—The mortality of women during the period of pregnancy and childbearing may be considered under three conditions—the first, already mentioned under the heading of deaths from puerperal septic diseases; the second, relating to the mortality of women caused by accidents of pregnancy or of childbirth (including deaths in which a secondary disease may complicate the puerperal state); and the third in relation to the deaths that occur of women during pregnancy and childbirth, who are stated to be suffering from some disease which appears to be independent of these conditions. The deaths from puerperal septic conditions numbered 189, or 26 more than the number registered in the preceding year, which number was 71 below that for 1906. Although there is an increase of 26 deaths in the year under notice from puerperal septic diseases, the number of these deaths is 28 below the average for the 10 years 1898-1907. The deaths from accidents of pregnancy and childbirth numbered 341, as compared with 342 in the year 1907, and an average of 375 for the 10 years, 1898-1907. The deaths of women associated with pregnancy and childbearing, but included in the abstracts under the head of the pre-existing or invading disease, numbered 85, as compared with 84 in the year 1907, and 69 such deaths in the year 1906. The deaths under this heading are set forth in Table 13, page xxiv, as are also the deaths from puerperal septic diseases, and accidents of childbirth, by age-periods.

In the following table the figures and rates per 1,000 births registered during the year are given for each of the three conditions under which deaths of women occur during pregnancy or childbirth, also the total of such deaths, with the rate per 1,000 births registered in each of the years 1903-1908, with an average rate for the 5 years 1903-1907.

YEARS.	Deaths from Puerperal Septic Diseases.		Deaths from Accidents of Pregnancy or Childbirth.		Total Deaths from Puerperal Septic Diseases and other accidents of Pregnancy or Childbirth.		Deaths from causes associated with Pregnancy or Childbirth (not included in foregoing).		Total Deaths caused by or associated with Pregnancy or Childbirth.	
	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.	Number	Rate per 1,000 Births.
1903, ...	233	2·29	340	3·34	573	5·63	84	0·82	657	6·45
1904, ...	216	2·08	367	3·54	583	5·62	99	0·95	682	6·57
1905, ...	227	2·21	346	3·36	573	5·57	83	0·81	656	6·38
1906, ...	234	2·26	373	3·60	607	5·86	69	0·67	676	6·53
1907, ...	163	1·60	342	3·36	505	4·96	84	0·83	589	5·79
Average, 5 years, 1903–7	214	2·09	354	3·44	568	5·53	84	0·81	652	6·34
1908, ...	189	1·86	341	3·34	530	5·20	85	0·83	615	6·03

From this table it appears that the rate for puerperal septic diseases rose from 1·60 per 1,000 births in 1907, to 1·86 per 1,000 births in 1908 ; that the rates for accidents of pregnancy and child-bearing declined from 3·36 per 1,000 births in 1907 to 3·34 per 1,000 births in 1908 ; that the rate for other deaths associated with pregnancy and child-bearing was the same, namely, 0·83 per 1,000 births, in both the years 1907 and 1908, and that in the aggregate the total deaths of women caused by or associated with pregnancy and childbearing rose from 5·79 per 1,000 births in 1907, to 6·03 per 1,000 births in 1908. The latter figure is, however, under the average rate for such deaths in the quinquennial period ending with the year 1907, namely, 6·34 per 1,000 births.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

Included among these causes are the following :—*Atrophy* ; *debility* ; *old age* ; *dropsy* ; *ascites*, or *anasarca* ; *tumour* ; *abscess* ; *hæmorrhage* ; *sudden death* (*cause unascertained*); *other ill-defined causes* ; and *unspecified causes*. That a large number of the deaths registered in Ireland are classified to ill-defined or not specified causes, is a subject that affects the interests of the public and of the medical profession. So far as is possible in my department every effort has been made to render the certification complete. I, therefore, as in my Annual Detailed Report for the year 1907, appeal to the medical profession of Ireland, with its noble and useful traditions, to help me in our mutual work of presenting the vital statistics of the country in the most perfect manner that is possible, by avoiding the issue of medical certificates which contain any ill-defined cause of death.

UNCERTIFIED CAUSES OF DEATHS.

In the report made by the Registrar-General for England and Wales for the year 1907, it is stated that the percentage of uncertified deaths is the lowest hitherto recorded, namely, 1·45 per cent. of all deaths registered. In Scotland, in 1906, the

*See page xxix.

percentage was 2·3. I have to report that of the deaths registered in Ireland in the year 1908 there were 25·0 per cent. registered without certificates from medical practitioners or from coroners. It should be stated that on examination into the localities in which this defect exists, it appears that in the urban centres of Dublin and Belfast, and the large town districts, the certification of deaths is well carried out, and that it is, speaking generally, in the large rural districts where the great bulk of uncertified deaths is found. In these areas difficulties present themselves, both to the people in seeking for medical advice and to the doctor in affording it. The high proportion of uncertified cases is also due to the fact that in Ireland many persons doubtless refrain from seeking medical advice for the old, the very young, or for persons afflicted with chronic diseases.

VIOLENCE.

The deaths from all forms of violence, whether accidental, homicidal, suicidal, or by process of law, numbered 1,916, and were equal to an annual rate of 0·44 per 1,000 of the population of Ireland, estimated to the middle of the year 1908. Of the total, 1,720 deaths were from accident or negligence, 48 from homicide, 147 by suicide, and one, of a man, by execution.

The accidental deaths include the deaths of 401 persons (of whom 217 were under 5 years of age), from burns, scalds, or explosions, 313 from drowning, 232 from falls, 166 caused by vehicles or horses, 115 from suffocation (of these 85 were infants under one year of age), 78 from weather agencies, 34 from poisons or poisonous vapours, and 21 from weapons and implements. Of the 48 homicidal deaths 16 were of children under 5 years of age; of the total 32 were deaths of males, and 16 of females. Of the 147 deaths by suicide, 115 were of males, and 32 were of females.

A Table (XVI.) has been prepared, showing all the deaths from poison registered during the year 1908, including deaths from industrial poisoning, morphine habit, and all deaths which have been returned as being directly or indirectly caused by food—such as diarrhœa due to food, ptomaine poison, and food poison. These deaths are shown by age-periods and by sexes, also whether occurring by accident, by suicide, or by homicide.

INQUESTS.

The number of inquests returned by the Registrars during the year 1908 was 1,732, or one inquest in every 44 deaths registered.

AGES AT DEATH.

The following Statement shows, by sexes, the mortality from all causes in Ireland during the Year 1908, at the undermentioned age-periods per 1,000 of the number of persons living at these ages.

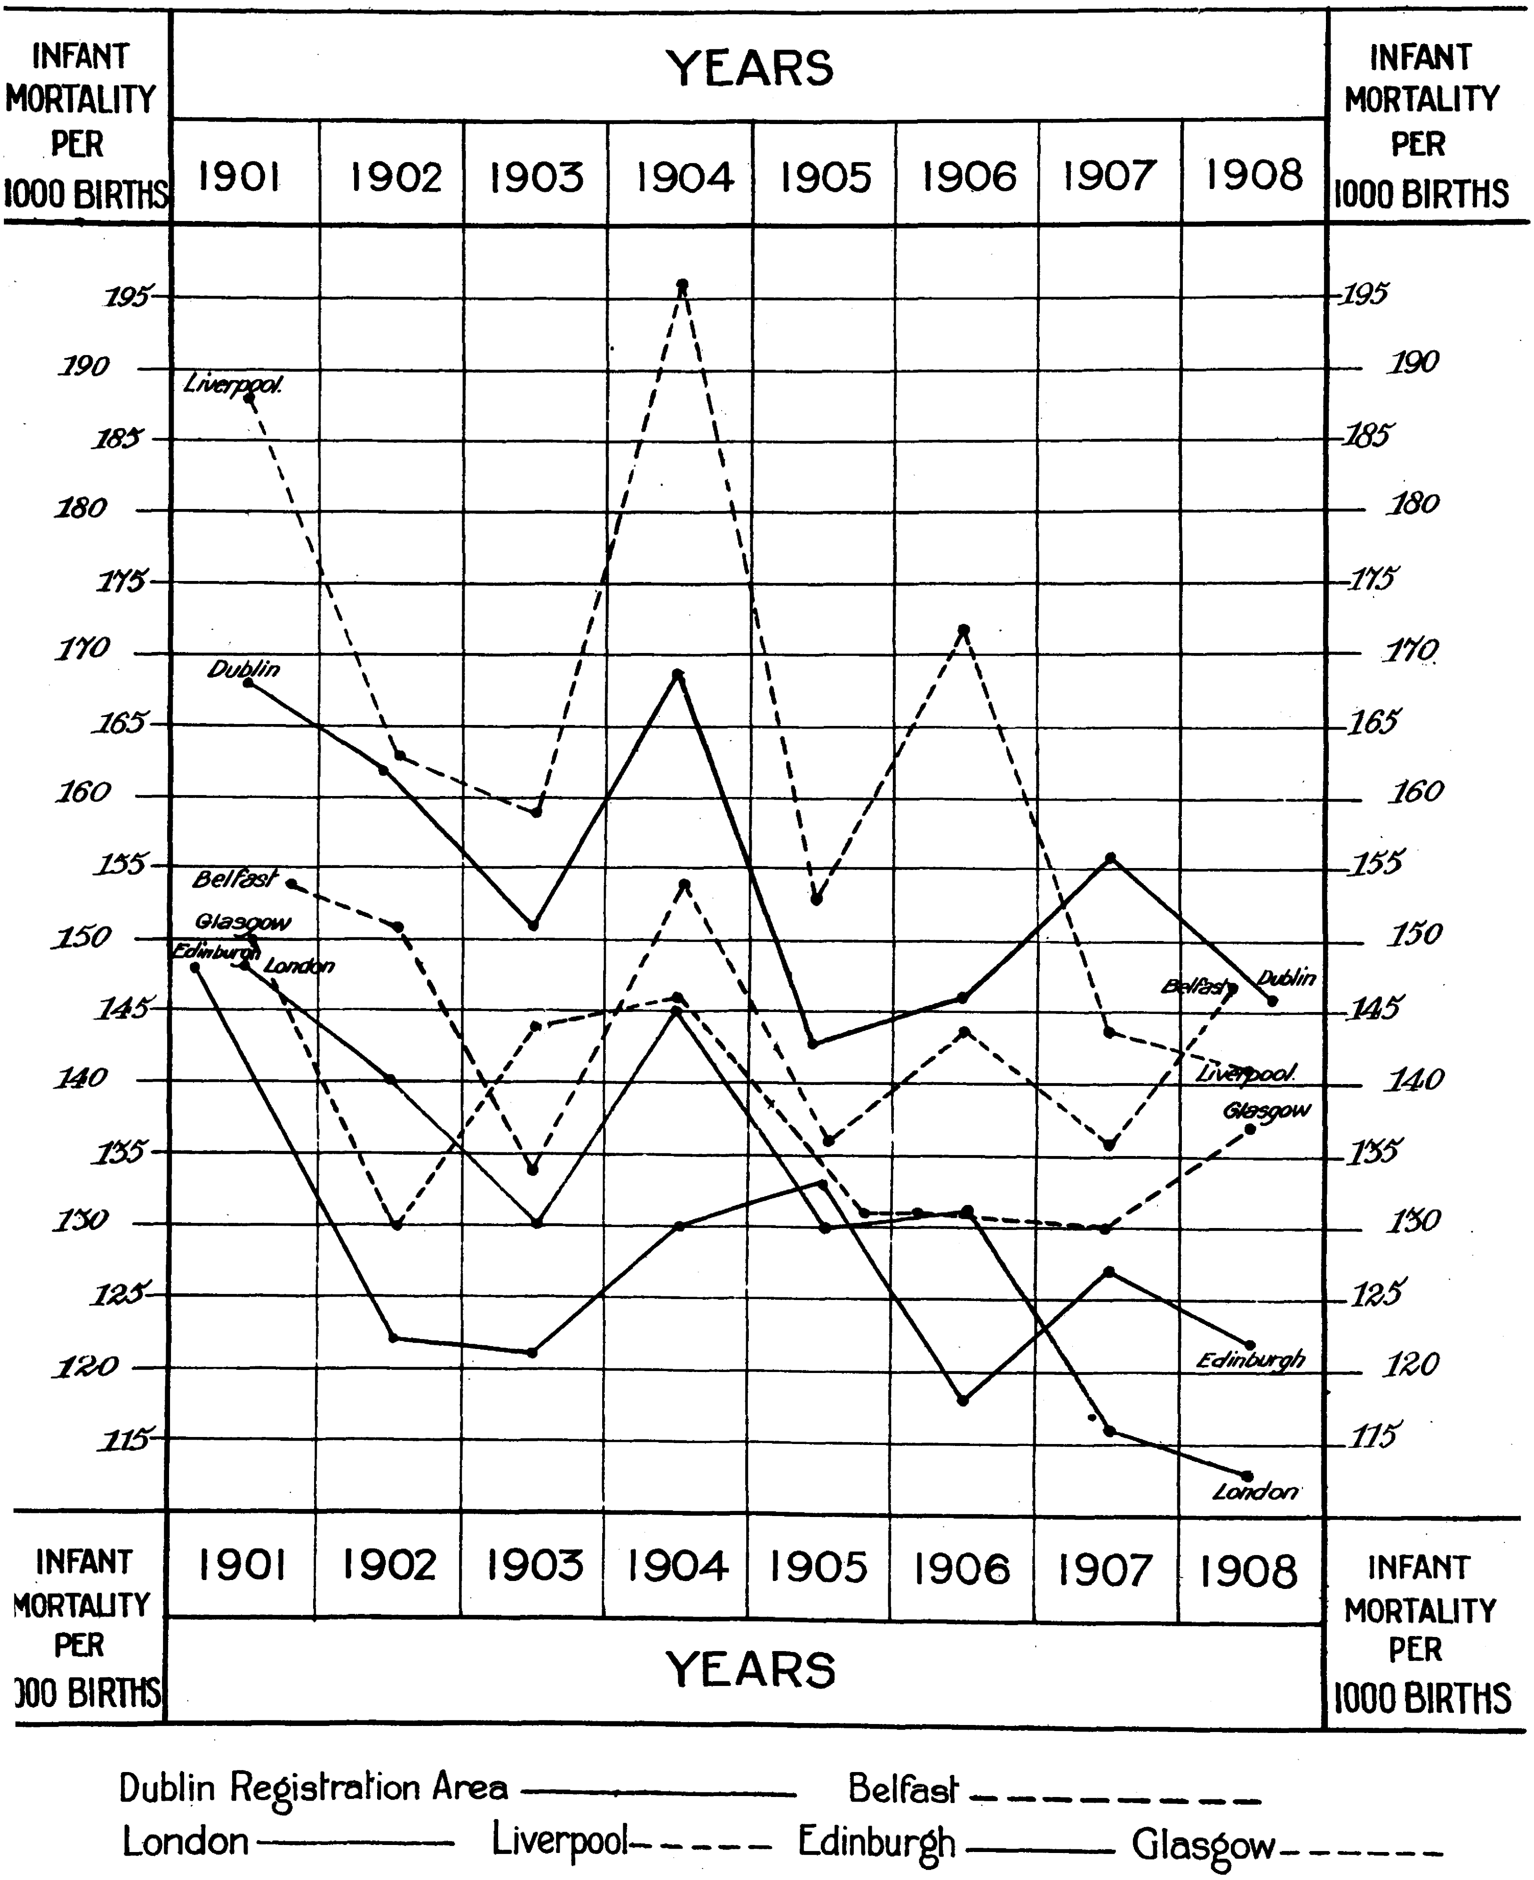
SEXES.	Mortality from all causes per 1,000 Living at Ages											
	All Ages.	Under 5 Years.	5—	10—	15—	20—	25—	35—	45—	55—	65—	75 years and upwards
MALES, ..	17·61	37·85	3·65	2·41	3·99	5·60	7·82	10·38	15·40	27·98	68·84	161·83
FEMALES,	17·57	33·60	3·80	3·39	4·83	5·67	7·89	10·53	14·42	29·12	74·24	157·77
TOTAL,	17·59	35·78	3·72	2·89	4·41	5·64	7·86	10·46	14·88	28·56	71·50	159·76

Amongst children under 5 years of age 15,531 deaths occurred—a mortality equal to 35·78 in every 1,000 of the number living at that age. Of these, 8,397 were boys and 7,134 girls; the former number representing 37·85 in every 1,000 boys, and the latter 33·60 in every 1,000 girls, under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 100·53 per 1,000 of the number of the living at that age.

Among the deaths registered are 580 of persons stated to have been aged 95 years or upwards—270 males and 310 females; of these 132 (41 males and 91 females) were returned as having been aged 100 years or upwards. In the absence of public

DIAGRAM No. 5.—Showing the proportion of Deaths of Infants under One Year of Age per 1,000 Births, in the Dublin Registration Area and in the City of Belfast, as compared with London, Liverpool, Edinburgh and Glasgow during each of the years 1901-8.



(To Face Page XXXIX)

records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found that the age was correctly stated, in almost every instance, so far as the Registrars could ascertain.

INFANT MORTALITY.

The preservation of infant life, is one of the principal objects in the work of sanitary reform. In Ireland for the whole country the death rate of infants (97 per 1,000 births), is below that for England and Wales in 1908, namely, 121 per 1,000 births, and Scotland in 1907 (110 per 1,000). In the urban centres, however, the comparison is by no means so favourable to Ireland, as will be seen in the diagram and tables which appear in connection with this paragraph. The total infant mortality rate for the year 1908, as already stated, was 97 per 1,000 births registered, having risen from 92 per 1,000 in the preceding year. For male infants the rate was 106 per 1,000 births and for female infants it was 87 per 1,000 births. In the following table the infant mortality is shown by sexes for the whole of Ireland—for the aggregate of the unions which, in the year 1901, contained towns which had each a population of 10,000 inhabitants or upwards and for the remainder of Ireland.

Table showing for Ireland, for Unions containing towns which, in 1901, had a population of 10,000 inhabitants or upwards ("Civic Unions"), and for the remainder of the country, the proportion of deaths of infants by sexes at the undermentioned ages, per 1,000 births registered.

AREAS.	MALES.				FEMALES.				TOTAL.			
	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.	Under 3 months.	3–6 months.	6–12 months.	Under one year.
Total "Civic Unions."	76·4	28·8	36·0	141·2	60·8	23·0	33·6	117·4	68·8	25·9	34·8	129·5
Remainder of Ireland.	53·3	12·7	16·7	82·7	41·8	10·4	14·8	67·0	47·7	11·6	15·8	75·1
Total of Ireland.*	62·5	19·2	24·4	106·1	49·5	15·5	22·4	87·4	56·2	17·3	23·5	97·0

It appears from this table that the mortality in the "Civic Unions" amounted to 129·5 per 1,000, while that in the remainder of Ireland was 75·1 per 1,000.

In the second table which follows, bearing on the subject of infant mortality, the death rate of infants under one year of age is shown for the Dublin Registration Area, Belfast county borough, London, Liverpool, Edinburgh and Glasgow, from the year 1901 to the year 1908 inclusive. During the period in Dublin the mortality has reduced from 168 to 146; in Belfast from 154 to 147; in London from 148 to 113; in Liverpool from 188 to 141; in Edinburgh from 148 to 122; and in Glasgow from 150 to 137 per 1,000 births registered.

Diagram No. 5, facing this page, also shows these facts in graphic form.

Table showing the number of deaths of infants under one year of age to every 1,000 births in the Dublin Registration Area, in the county borough of Belfast, in London, Liverpool, Edinburgh and Glasgow, during the years 1901-1908.

AREAS.	Deaths of Infants under 1 Year of Age to every 1,000 Births.							
	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.
Dublin Registration Area,	168	162	151	169	143	146	156	146
Belfast County Borough,	154	151	134	154	136	144	136	147
London, ...	148	140	130	145	130	131	116	113
Liverpool, ...	188	163	159	196	153	172	144	141
Edinburgh, ...	148	122	121	130	133	118	127	122
Glasgow, ...	150	130	144	146	131	131	130	137

The principal causes which contribute to infant mortality are set forth in the following table. The death rates are given at age-periods, namely, under 3 months, from 3 to 6 months, and from 6 to 12 months, the total rates for these 3 periods being, respectively, 56·17, 17·35, and 23·45 per 1,000 births registered. Among the common infective diseases, as in the year 1907, whooping-cough caused the highest mortality, namely, 3·67 per 1,000 births; the rate for measles was 1·89, for influenza the rate was 0·86, and for diphtheria, *croup*, it was 0·67 per 1,000 births. Diarrhœa, gastritis, and enteritis caused a rate of 12·78 per 1,000; tuberculous disease a rate of 4·11 per 1,000, and wasting diseases a rate of 34·60 per 1,000. Among other causes of death, bronchitis shows a death rate of infants under one year of 11·22 per 1,000 births; *convulsions* a rate of 10·66 (the deaths from *convulsions* being 11·0 per cent. of all deaths of infants under one year registered in 1908); pneumonia affords a rate of 6·68; meningitis (not tuberculous) gives a rate of 1·32; suffocation (mainly over-laying) a rate of 0·83; and syphilis a rate of 0·65 per 1,000 births registered.

Table showing for Ireland the Mortality by certain causes among infants under 12 months old, per 1,000 Births registered in the Year 1908, distinguishing between those under 3 months old, 3 months and under 6 and 6 months and under 12.

Diagram No. 6 facing this page shows for the Dublin Registration Area and for the county borough of Belfast the relation of the mean temperature during the months of July, August and September for each of the years 1901 to 1908 to the total infant mortality recorded during these months. It may be seen that generally an increase in the mean temperature is accompanied by an increase in the infant mortality.

On page xli a table appears, which includes the infant mortality rate for the 22 principal urban districts in Ireland. It appears from this table, which is derived from the Registrar-General's Yearly Summaries, that the average death rate of infants in the aggregate was 140 per 1,000 births registered in 1908, that the highest infant mortality rate in 1908 occurred in Wexford urban district, namely, 168 per 1,000 births, and the lowest infant death rate was in Dundalk, where the rate of 78 per 1,000 obtained.

DIAGRAM No. 6 (*a*).—Showing the relation between the Infant Mortality and the Mean Temperature of the air, during the Quarter ended 30th September, in the Dublin Registration Area in each of the years 1901-1908.

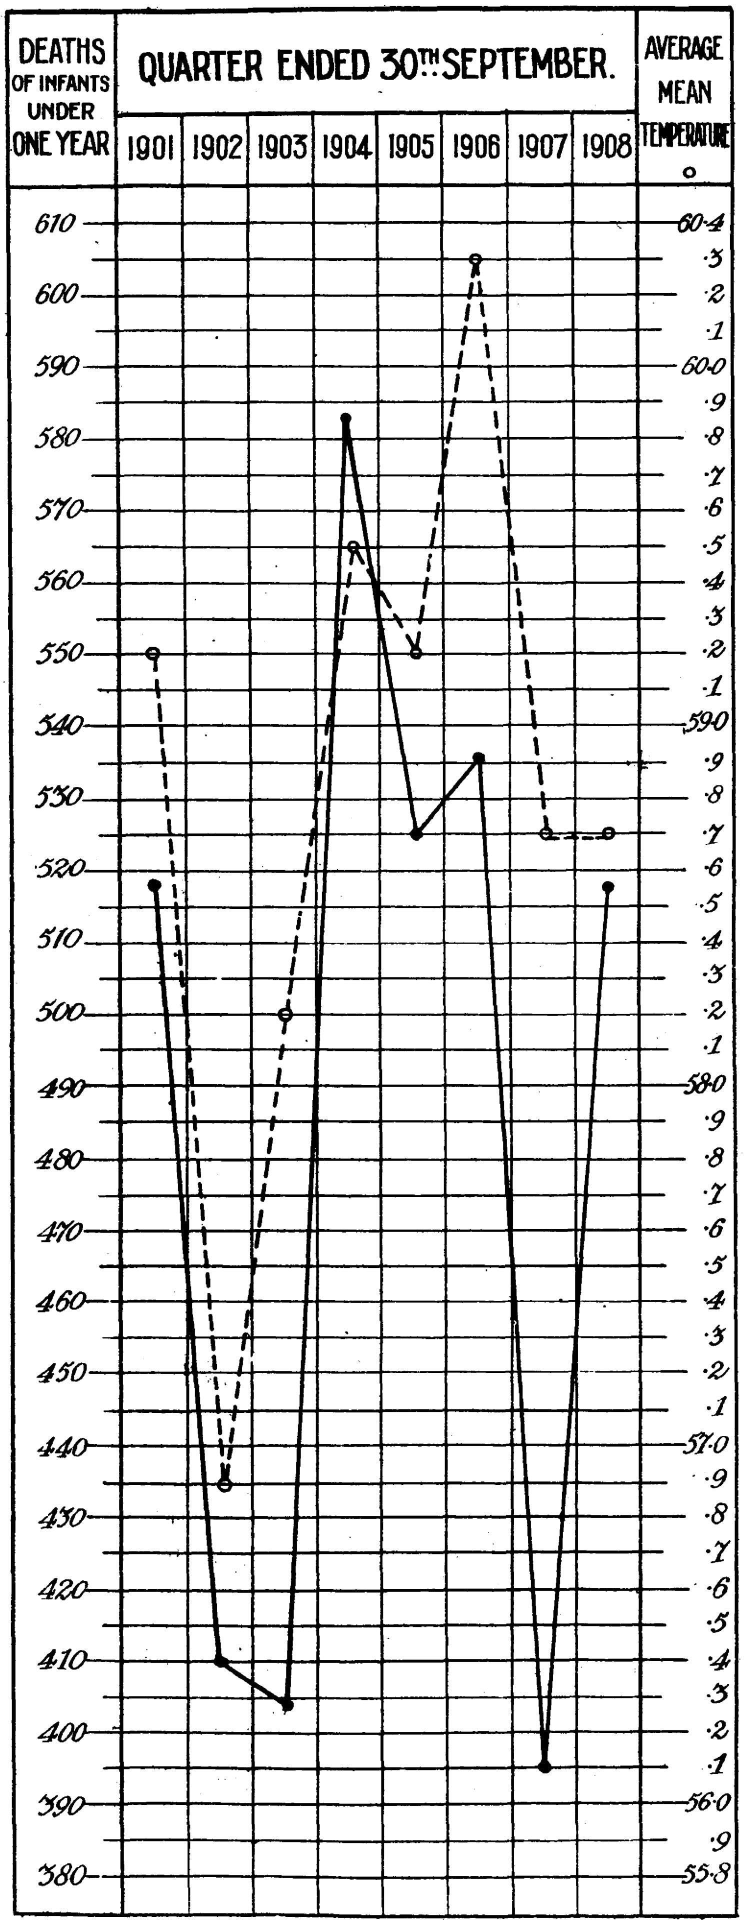

DIAGRAM No. 6 (*b*).—Showing the relation between the Infant Mortality and the Mean Temperature of the air, during the Quarter ended 30th September, in the City of Belfast, in each of the years 1901-1908.

* Formerly described as "Simple Continued Fever."

OCCUPATIONAL MORTALITY.

In the table on pages xlii. and xliii., as published in the Registrar-General's Yearly Summary, the mortality in 1908 among the several social grades of the population of the Dublin Registration Area is shown.

From this table it will be observed that among the families of the Professional and Independent class the annual death-rate from all causes was 14·4 per 1,000 of the population in 1901; among the Middle class, it was 15·9; among the Artisan class and Petty Shopkeepers, the rate was 17·6; and among the General Service class, it was 22·8 per 1,000.

EMIGRATION.

From the returns collected and forwarded to me by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, it appears that the number of emigrants (natives of Ireland) who left the ports of Ireland during the year 1908 was 23,295; 10,480 of these were males and 12,815 females. Of the whole number, 3,547 were natives of the province of Leinster, 6,423 natives of Munster, 8,409 of Ulster, and 4,916 of Connaught.

Of the total emigrants from Ireland in 1908, 11·1 per cent. were under 15 years of age, 81·2 per cent. were between 15 and 35 years old, and 7·7 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1908 was 6*d.*, the average price in the year 1907 being 5¾*d.** Oatmeal (1st quality) averaged 15*s.* per cwt. in Dublin, the average price for 1907 being 14*s.* 7*d.*; the average prices of potatoes in Dublin ranged from 3*s.* 4*d.* to 3*s.* 10*d.* per cwt., against 4*s.* to 4*s.* 6*d.* in 1907; and those of beef from 51*s.* 6*d.* to 57*s.* per cwt., against 52*s.* to 56*s.* 6*d.* in 1907.

TABLE XVII.—AVERAGE PRICES in DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1898–1908, and the AVERAGE NUMBER OF PERSONS IN IRELAND receiving IN-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES of PROVISIONS, and the AVERAGE NUMBER OF PERSONS in RECEIPT OF RELIEF during each quarter of the year 1908.

*Prices derived from returns received from Messrs. Bolands, Limited, and Messrs. Johnston, Mooney and O'Brien, Limited.

†Compiled from Returns furnished by the Local Government Board.

‡Not including those relieved by means of works devised for the relief of distress, viz.:—an average of 3,180 in First Quarter, 13,656 in Second Quarter and 2,048 in Third Quarter of 1905, and an average of 1,062 in First Quarter, 7,199 in Second Quarter, and 2,645 in Third Quarter of 1908.

From a retrospect of the period covered by the foregoing table, *i.e.*, for the year 1908, and the ten years preceding, it is found that in the year 1898 the prices of beef were lowest, when the average ranged from 44*s.* 6*d.* to 53*s.* per cwt.; bread was cheapest in 1899, 1900, and 1901, respectively, when the average price (1st quality delivered) was 5¼*d.* per 4 lb. loaf. Oatmeal (1st quality) was cheapest in 1901, in which year the average price was 13*s.* 4*d.* per cwt.; and potatoes in 1899, when the average range of prices was from 2*s.* 5*d.* to 3*s.* 5*d.* per cwt. The highest price of bread was in the year 1898, when the 4 lb. loaf averaged 6¼*d.*, and in the same year the price of oatmeal was highest, viz., 15*s.* 3*d.* per cwt. The highest rate for potatoes was from 4*s.* 0*d.* to 4*s.* 6*d.* per cwt. in 1907, and for beef from 55*s.* 6*d.* to 59*s.* 6*d.* per cwt. in 1902.

I have been favoured by the Local Government Board for Ireland with the returns embodied in this Report relating to Pauperism in Ireland, for which I desire to express my obligations. These returns showed that the average number of workhouse inmates in Ireland on Saturdays during the year 1908 was 44,920, being 712 above the average for the preceding year; and that the average number of persons receiving out-door relief (see Table XVII.) was 56,870, or 314 above the corresponding number for 1907.

THE WEATHER.

As heretofore, through the kind permission of the Editors of the "Dublin Journal of Medical Science," the following particulars and those given on pages 155–174 are presented. These particulars have been abstracted from returns of Meteorological Observations taken in the City of Dublin by Sir John W. Moore, M.A., M.D., D.P.H., DUB.; D.SC., OXON.; F.R.C.P.I., F.R.MET. SOC.; and published in the Journal during the years 1908-1909. The tables on pages 175-177 are also founded on Sir John Moore's observations.

The mean Atmospherical Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the daily maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A *rainy day* is one on which at least ·01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The *Mean Height of the Barometer* during the year 1908 was 29·970 inches. The highest observed reading was 30·764 inches at 9 P.M. on February 6th. The lowest observed reading was 28·698 inches, at 11 P.M. on December 10th. The extreme range of atmospherical pressure was 2·066 inches, as compared with 2·157 inches in 1907.

The *Mean Temperature* of the air for the year was 50·7°. The highest reading was 76·3° on August 3rd, and the lowest reading was 22·8° on January 5th. The average mean temperature for the years, 1888–1907 was 49·9°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50·0°.

Rain fell on 198 days, including snow or sleet on 16 days and hail on 25 days. The average annual number of rainy days in the years, 1888–1907 was 197·7. The total rainfall measured 23·753 inches, compared with an average of 27·383 inches in the twenty years, 1888–1907. During the first half of 1908 (January to June, inclusive) the rainfall was 11·729 inches on 107 days; during the second half (July to December, inclusive) 12·024 inches fell on 91 days.

As regards the *Direction of the Wind*, 732 observations were made during the year, with this result—N., 44; N.E., 52; E., 71; S.E., 73; S., 63; S.W., 124; W., 160; N.W., 116; Calms, 29.

In bringing this Report to a conclusion, I desire to record my indebtedness to Dr. Ninian M. Falkiner, Medical Superintendent of Statistics in this Office, for the able assistance he has afforded me in its preparation. The Causes of Death have been tabulated by him personally, or under his immediate supervision, a fact which greatly enhances the value of these Statistics, and the early appearance of the Report is in a large degree owing to his personal exertions in having the Tables completed at the earliest possible moment.

I have the honour to be,

Your Excellency's faithful Servant,

ROBERT E. MATHESON,

Registrar-General.

GENERAL REGISTER OFFICE,
CHARLEMONT HOUSE,
DUBLIN, *7th July,* 1909.

ANNUAL ABSTRACTS

OF

MARRIAGES, BIRTHS, AND DEATHS,

1908.

MARRIAGES, BIRTHS, and DEATHS *registered* in the Year 1908.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS, AND DEATHS, 1908.

SUPERINTENDENT REGISTRARS' DISTRICTS, ARRANGED BY COUNTIES.*

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the deaths* to the extent stated.

No.	SUPERINTENDENT REGISTRARS' DISTRICTS.	AREA in Statute Acres.	Population, 1901.	TOTAL.			BIRTHS				DEATHS.		Excess of Births over Deaths.
				MARRIAGES.	BIRTHS.	DEATHS.	Including Illegitimate Births.		Illegitimate Births.				
							Males.	Females.	Males.	Females.	Males.	Females.

NOTE.—The Registrars' Districts are subdivisions of the Unions or Superintendent Registrars' Districts, and are identical with the Dispensary Districts of the same names, except in a few instances. See note (*), pp. 4-5.

The letter *W.* denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Wherever the minus sign (—) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, *less than the Deaths* to the extent stated.

* Boundaries altered as from 1st July, 1908, by the addition of the Registrar's District of Coolock and Drumcondra No. 2, which is abolished. The figures for the year relate to the extended area.

BIRTHS AND DEATHS Registered in the Year, 1908—REGISTRARS' DISTRICTS arranged by COUNTIES and SUPERINTENDENT REGISTRARS' DISTRICTS.—*continued.*

---

* Boundaries of Clonmel (now styled Clonmel No. 1), and Marlfield (now styled Clonmel No. 2 (Marlfield)), altered as from 1st July, 1908, by the transfer from the former to the latter, of the District Electoral Division of Clonmel Rural. The births and deaths shown for Clonmel No. 1 and Clonmel No. 2 (Marlfield) include those registered in the districts of Clonmel and Marlfield, respectively, during the period prior to the alteration of their boundaries.

Note.—This Table has been constructed for the years 1834 to 1841—By adopting the rate of increase between the population of 1831 and 1841 according to the Irish Census Report of 1841.

1842 to 1846—By taking the English average birth-rate of 1 in 31, and death-rate of 1 in 45, and deducting the annual emigration from Ireland according to the returns received from the Emigration Commissioners in England.

1847 to 1851—The English birth-rate, as above, was used, deducting the number of deaths and the number of emigrants in each year, as given in the Irish Census Reports of 1851; an allowance, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number thus arrived at for 1851 over the actual population according to the Census of that year

1852 to 1871—The English birth and death rates, as above, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over census numbers for 1861 and 1871 as explained for the last period.

1872 to 1908—By adding the Births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adjusting the results for the years 1872–81, 1882–91, and 1892–1901, to allow for the discrepancy between the number thus arrived at for 1881, 1891, and 1901, respectively, and the population as shown by the Census in each of these years.

Ages of the Population in Ireland according to the Census Returns of 1861, 1871, 1881, 1891, and 1901.

Periods.	Sexes.	Ages—Years.														Total.

* In 3,838 instances in 1861—2,453 males, and 1,385 females; in 3,769 instances in 1871, viz., 2,176 males, and 1,593 females; in 2,996 instances in 1881, viz., 1,765 males, and 1,231 females; and in 1,786 instances in 1891, viz., 852 males, and 934 females, the age was not stated in the Returns.

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1908.

By Sir John W. MOORE, B.A., M.D., DUBL.; D.SC., OXON.; F.R.C.P.I.; F.R.MET. SOC.

(Extracted from the *Dublin Journal of Medical Science*).

January.—The year 1908 opened with a spell of severely cold weather, determined by an anticyclonic band which spread westward across Scotland from the Baltic and Denmark. On the night of the 5th a depression passed north-eastwards along the west coasts of Ireland and Scotland, causing S.W. winds and an extraordinary and rapid rise of temperature. Cold weather soon returned, but the third week was unsettled, and often rainy, in Ireland and Scotland. In the week ended Saturday the 25th, cold weather held in England, and to a less extent in the eastern parts of Ireland and Scotland. The last few days were changeable, showery and windy. The weather was very cold during the first five days. On the evening of the 5th temperature rose briskly—a range of 30·6° occurring between Sunday and Monday, the 5th and 6th. This warm wave was transitory, but a second open spell set in on the 13th, lasting to the 17th, and this was followed by another warm wave from the 22nd to the 27th, inclusive.

In Dublin the arithmetical mean temperature (41·5°) was below the average (41·7°) by 0·2 degree; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 40·8°. In the forty-three years ending with 1908, January was coldest in 1881 (M. T. = 33·2°), and warmest in 1898 (M. T. = 47·8°). In 1907 the M. T. was 42·7°.

The mean height of the barometer was 30·087 inches, or 0·213 inch above the corrected average value for January—namely, 29·874 inches. The mercury rose to 30·500 inches at 9 a.m. of the 20th, having fallen to 29·246 inches at 9 p.m. of the 7th. The observed range of atmospheric pressure was, therefore, 1·254 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 40·8°, or 0·9° below the value for January, 1907. Using the formula, *Mean Temp. = Min. + (Max. — Min.* × ·52), the M. T. becomes 41·7°, compared with a thirty-five years' (1871-1905) average of 41·9°. The arithmetical mean of the maximal and minimal readings was 41·5°, compared with a thirty-five years' average of 41·7°. On the 16th the thermometer in the screen rose to 55·9°—wind, S.W.; on the 5th the temperature fell to 22·8°—wind, calm. The minimum on the grass was 18·9°, also on the 5th.

The rainfall was 2·055 inches, distributed over 16 days. Of this amount ·713 inch fell on the 6th. The average rainfall for January in the thirty-five years, 1871–1905, inclusive, was 2·21 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were somewhat below the average. The record rainfall for January was in 1895—namely, 5·711 inches on 24 days. In 1876, only ·406 inch was measured on but 9 days. In 1907, only ·428 inch fell on but 9 days.

The atmosphere was foggy on the 4th, 5th, 6th, 18th 20th, 21st and 23rd. High winds were noted on 16 days, reaching the force of a gale on 4 days—the 5th, 16th, 26th and 28th. Snow or sleet fell on the 8th and 28th; hail on the 9th. Solar halos were seen on the 15th and 19th, lunar halos on the 10th, 16th, and 18th, and lunar coronas on the 12th, 16th and 17th. Temperature reached or exceeded 50° in the screen on 9 days; while it fell to 32° in the screen on 8 nights, compared with 4 nights in 1907, 2 nights in 1906 and 1905, 3 in 1904, 7 in 1903 and 1902, 3 in 1901, but 18 in 1895. The minima on the grass were 32° or less on 15 nights, compared with 16 nights in 1907, 11 in 1906, 9 in 1905, 11 in 1904, 9 in 1903, 12 in 1902, 11 in 1901, and 29 in 1895. On the 4th the maximal temperature in the screen was 35·2°.

In Dublin the rainfall up to January 31st, 1908, amounted to 2·055 inches on 16 days, compared with only ·428 inch on but 9 days in 1907, 4·127 inches on 22 days in 1906, 1·897 inches on 14 days in 1905, 2·535 inches on 19 days in 1904, 3·269 inches on 20 days in 1903, 1·614 inches on 12 days in 1902, 2·672 inches on 17 days in 1901, only ·406 inch on 9 days in 1876; and with a thirty-five years' average (1871–1905) of 2·21 inches on 18 days.

Mr. J. E. W. Flood reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·087 inches, the range of atmospheric pressure being from 29·249 inches at 9 p.m. of the 7th to 30·495 inches at 9 a.m. of the 20th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·4°. The arithmetical mean of the daily maximal and minimal temperatures was 42·3°. The screened thermometers rose to 56·3° on the 16th, and fell to 20·5° on the 5th. On the 5th also the grass minimum was 12·8°. On the 27th the black bulb *in vacuo* rose to 74·9°. Rain fell on 14 days to the amount of 1·876 inches, the greatest fall in 24 hours being ·653 inch on the 6th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 33·7 hours, of which 4·4 hours occurred on the 12th. The mean daily sunshine was 1·1 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 39·5°; at a depth of 4 feet it was 43·0°.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 18 days to the amount of 2·320 inches, the greatest measurement in 24 hours being ·730 inch on the 6th. On that day the highest shade temperature of the month, 53·1°, was recorded, whereas the previous day had been the coldest, the thermometer having fallen to 18·0° in the screen, and on the 4th to 13·2° on the grass. The total duration of bright sunshine was 62·6 hours, the largest amount recorded on one day being 7 hours on the 20th.

Mr. R. Cathcart Dobbs, J.P., reports a rainfall of 1·960 inches on 13 days at Knockdolian, Greystones, Co. Wicklow, the largest measurement in 24 hours being ·655 inch on the 22nd. On the 6th ·535 inch was recorded.

Dr. Arthur G. Price, writing from Clonsilla on the Burnaby Estate, Greystones, Co. Wicklow, reports that the rainfall at that place was 1·63 inches on 15 days, compared with only ·550 inch on 9 days in 1907. The greatest fall in 24 hours was ·49 inch on the 6th. The mean temperature of the month was 40·7°. The thermometer rose to 53° on the 27th, having fallen to 24° on the 4th. Frost occurred on 9 days.

Miss Muriel E. O'Sullivan returns the rainfall at White Cross, Stillorgan, Co. Dublin, at 2·060 inches on 19 days, ·790 inch being measured on the 6th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·495 inches on 14 days, compared with only ·362 inch on but 6 in January, 1907. The greatest fall in 24 hours was ·465 inch on the 6th. The mean shade temperature was 38·4°, the extremes being—highest, 53° on the 27th; lowest, 18° on the 4th.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 2·29 inches on 19 days, the greatest daily measurement being ·87 inch on the 6th. The thermometer in the shade ranged from 55° on the 16th to 22° on the 5th. The mean shade temperature was 41·4°. There was a snow shower on the 8th.

Dr. Christopher Joynt, F.R.C.P.I., recorded 2·131 inches of rain on 17 days at 21, Leeson Park, Dublin. The heaviest fall in 24 hours was ·790 inch on the 6th.

Mr. Robert O'B. Furlong, C.B., returns the rainfall at Cloneevin, Killiney, at 1·64 inches on 19 days. The maximal fall in 24 hours was ·63 inch on the 6th. The average January rainfall of the 23 years (1885-1907) was 2·340 inches on 16·6 days. Snow and sleet fell on the 28th.

In Cork, Mr. William Miller measured 2·52 inches of rain on 20 days, the greatest rainfall in 24 hours was ·49 inch on the 14th. The rainfall was 1·71 inches in defect of the average for January.

The Rev. Arthur Wilson, M.A., reports that rain fell on 21 days at the Rectory, Dunmanway, Co. Cork, to the amount of 6·42 inches. The heaviest falls were 1·27 inches on the 15th, 1·21 inches on the 16th, ·70 inch on the 23rd, ·75 inch on the 6th, and ·66 inch on the 14th. On the whole, it was a wet month, but with fine, cold intervals.

February.—A month of uninterrupted and often strong, though generally soft, oceanic winds, clouds, frequent showers, but no heavy rains, and high mean temperature. There was little or no frost in the Dublin district. An anticyclone of remarkable staying power lay over Ireland during the first half of the month. On the evening of the 6th the barometer rose to 30·764 inches in Dublin. From the 13th to the close rain fell daily in Dublin. Under the lee of the mountains, the weather was fairer and drier—at Greystones the rainfall was not quite nine-tenths of an inch, and there were only 10 rain-days compared with 20 in Dublin. The second half of the month was very windy as well as showery, and a violent gale occurred on the 22nd. The last week was distinctly cold, as polar air swept down from the Icelandic region to the British Isles.

In Dublin the mean temperature (44·8°) was 2·4° above the average (42·4°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·9°. In the forty-four years ending with 1908, February was coldest in 1895 (M. T. = 34·2°), and warmest in 1903 (M. T. = 47·5°). In 1906 the M. T. was 39·7°. In 1907 it was 40·3°.

The mean height of the barometer was 30·110 inches, or 0·255 inch above the average value for February—namely, 29·855 inches. The mercury rose to 30·764 inches at 9 p.m. of the 6th, and fell to 29·210 inches at 9 p.m. of the 28th. The observed range of atmospheric pressure was, therefore, 1·554 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·9°, or 3·1° above the value for January, 1908. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·50), the M. T. is 44·8°, compared with a thirty-five years' (1871-1905) average of 42·4°. On the 22nd the thermometer in the screen rose to 53·2°—wind, S.W.; on the 29th it fell to 33·0°—wind, N.W. The minimum on the grass was 30·2° on the 29th.

The rainfall was 1·372 inches, distributed over 20 days. The average rainfall for February in the thirty-five years, 1871-1905, inclusive, was 2·01 inches, and the average number of rainy days was 15. The rainfall, therefore, was considerably below the average, whereas the rainy days were much in excess. In 1883 the rainfall in February was large—3·752 inches on 17 days; in 1879 also 3·706 inches fell on 23 days. On the other hand, in 1891, only ·042 inch was measured on but 2 days. In 1907, 1·304 inches fell on 14 days.

There was a complete absence of fog during the month. The amount of cloud—68·8 per cent. —was above the average—66 per cent. High winds were noted on 13 days, and reached the force of a gale on 3 days—namely, the 14th, 22nd, and 28th. Hail fell on the 21st, 22nd, 23rd, 27th and 28th. Snow or sleet fell on the 15th, 27th, 28th and 29th. Lunar halos were seen on the 12th and 14th, and a lunar corona on the 9th. Lightning occurred on the early morning of the 29th.

The temperature reached or exceeded 50° in the screen on 15 days, while it never fell to 32°, compared with freezing temperatures on as many as 18 nights in 1895. The minima on the grass were 32° or less on only 2 nights, compared with every night in 1895. The thermometer never failed to rise to 40° in the screen in the daytime. The highest minimum was 46·6° on the 20th.

In Dublin the rainfall up to February 29th amounted to 3·427 inches on 36 days, compared with 1·732 inches on 23 days in 1907, 5·771 inches on 42 days in 1906, 2·647 inches on 26 days in 1905, 5·847 inches on 36 days in 1904, 5·503 inches on 35 days in 1903, 3·362 inches on 22 days in 1902, 3·872 inches on 29 days in 1901, and a thirty-five years' (1871–1905) average of 4·220 inches on 33 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. J. E. W. Flood, Sch., reports that the mean height of the barometer was 30·106 inches, the highest reading observed being 30·758 inches at 9 p.m. of the 6th, the lowest, 29·202 inches at 9 p.m. of the 28th. The mean temperature was 45·2°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 44·4°. The screened thermometers rose to 53·9° on the 22nd, and fell to 33·2° on the 29th. The grass minimum was 29·0° on the 29th, while the black bulb *in vacuo* rose in the sun to 86·3° on the 21st. The mean daily maximum was 49·3°; the mean daily minimum, 41·0°; and the mean daily minimum on the grass, 35·7°. Rain fell on 15 days to the amount of 1·269 inches, ·379 inch being measured on the 14th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was only 46·8, giving a daily average of 1·6 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 43·1°; at a depth of 4 feet it was 44·3°.

The rainfall at Leeson Park, Dublin, is given by Dr. C. Joynt, F.R.C.P.I., as 1·354 inches on 20 days, ·390 inch having been measured on the 14th.

At the Ordnance Survey Office, Phœnix Park, the rainfall was 1·817 inches on 23 days, the maximal measurement in 24 hours being ·575 inch on the 14th. The total amount of sunshine was 67·9 hours, of which 6·5 hours were recorded on the 23rd.

Miss Muriel E. O'Sullivan reports that at White Cross, Stillorgan, Co. Dublin, 1·257 inches of rain fell on 22 days, ·290 inch, the maximum, being measured on the 14th. Since January 1, the rainfall at this station equals 3·317 inches on 41 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 20 days to the amount of 1·16 inches, the greatest daily fall being ·37 inch on the 14th. In February, 1901, the rainfall was 1·55 inches on 10 days; in 1902, it was 2·76 inches on 11 days; in 1903, 2·95 inches on 15 days; in 1904, 4·05 inches on 21 days; in 1905, 1·07 inches on 12 days; in 1906, 2·03 inches on 18 days, and in 1907, 1·29 inches on 13 days. The temperature in the shade ranged from 52° on the 22nd to 32° on the 29th. The mean temperature in the screen was 44·9°, compared with 39·0° in 1902, 47·1° in 1903, 40·4° in 1904, 43·6° in 1905, 39·6° in 1906, and 39·6° in 1907.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was only ·885 inch on 10 days. The heaviest fall in 24 hours was ·180 inch on the 16th. In February, 1901, the rainfall was 1·385 inches on 11 days; in 1902 it was 2·590 inches on 8 days; in 1903, 2·870 inches on 14 days; in 1904, 2·957 inches on 19 days; in 1905, ·650 inch on 9 days; in 1906, 1·845 inches on 14 days; and in 1907, 1·230 inches.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded only ·85 inch on 10 days, ·21 inch being measured on the 16th. The mean temperature of the month was 43·6°, the extremes being—highest, 55°, on the 20th; lowest, 30°, on the 28th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 1·103 inches on 17 days. The greatest fall in 24 hours was ·255 inch on the 16th. The mean shade temperature was 41·9°, the extremes being—highest, 50·5°, on the 20th; lowest, 28°, on the 28th.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 3·01 inches on 14 days, the greatest fall in 24 hours being 1·07 inches on the 14th. The rainfall for January and February equals 9·43 inches on 35 days.

In the City of Cork, Mr. William Miller registered 1·15 inches of rain on 12 days, the largest measurement in 24 hours being ·32 inch on the 16th. The rainfall was 2·28 inches below the average, and the lowest for February since 1891, when it was only ·50 inch. During the first two months of 1908 the rainfall was 3·67 inches, or 3·96 inches below the average. The thermometer in the screen rose to 53° on the 20th and fell to 31° on the 29th. The mean temperature was 43·0°, or 0·9° above the average for the month.

MARCH.—An unsettled, cold and rainy month—the mean temperature was only half a degree Fahrenheit above that of January and was actually 2·8° below that of February. The mean minimum temperature in the screen was only 36·1°, compared with 37·1° in January and 40·7° in February, and the mean minimum temperature on the ground was 33·2°, compared with 33·8° in January and 38·4° in February. The mean maximum temperature was 47·8°, compared with 45·9° in January and 48·8° in February.

True to the ancient adage, March "came in like a lion," and the first week of "March many weathers" was changeable, cold, at times blustering, and with a copious rainfall (1·011 inches on 6 days). Except in the middle of the second week, the weather was again unsettled and changeable, as well as for the most part cold. The third week was distinctly cold and changeable, though very fine, bright intervals occurred. The wind was light and variable, blowing chiefly from cold points of the compass. In the fourth week an anticyclone held over the North of Russia, the Baltic and Scandinavia, whereas areas of low atmospheric pressure moved along devious paths over the troubled waters of the Atlantic Ocean between the British Isles and Greenland. During the last three days stormy, cold weather prevailed, the advent of spring being postponed to April.

In Dublin the arithmetical mean temperature (42·0°) was 1·7° below the average (43·7°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·2°. In the forty-three years ending with 1907, March was coldest in 1867 and 1883 (M. T. = 39·0°), and warmest in 1903 (M. T. = 48·1°). In 1907 the M. T. was 46·5°.

The mean height of the barometer was 29·809 inches, or 0·107 inch below the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·199 inches at 9 p.m. of the 14th and fell to 28·994 inches about 5 a.m. of the 6th. The observed range of atmospheric pressure was, therefore, 1·205 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·2°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·485), the M. T. becomes 41·8°. The arithmetical mean of the maximal and minimal readings was 42·0°, compared with a thirty-five years' (1871–1905) average of 43·7°. On the 8th the thermometer in the screen rose to 57·0°—wind, W.S.W.; on the 5th the temperature fell to 30·0°—wind, S. The minimum on the grass was 26·9° on the 5th.

The rainfall was 2·940 inches, distributed over 22 days. The average rainfall for March in the thirty-five years, 1871–1905, inclusive was 1·910 inches, and the average number of rain-days was 17·0. The rainfall, therefore, and the rain-days were much above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was ·288 inch on 8 days in 1893. In 1907 the rainfall was 1·934 inches on 19 days.

The atmosphere was foggy in the city on the 4th, 12th, 16th, 18th, 19th and 20th. High winds were noted on 11 days, reaching the force of a gale on 6 occasions—namely, the 6th, 8th, 9th, 22nd, 29th and 30th. Snow or sleet occurred on the 1st, 3rd, 4th, 6th, 19th and 20th; hail fell on the 1st, 3rd, 10th, 19th and 22nd. A solar halo appeared on the 11th and 28th, and a lunar halo on the 9th. Temperature reached or exceeded 50° in the screen on 10 days, compared with 25 days in 1907, 17 days in 1906, 20 in 1905, 10 in 1904, 18 in 1903, 23 in 1902, and only 6 in 1901. It fell to 32° in the screen on 3 nights. The minima on the grass were 32° or less on 16 nights, compared with 9 nights in 1907, 12 nights in 1906, 8 nights in 1905, 13 in 1904, 4 in 1903, 5 in 1902, and 11 in 1901.

The rainfall in Dublin during the three months ending March 31st amounted to 6·367 inches on 58 days, compared with 3·666 inches on 42 days in 1907, 7·291 inches on 59 days in 1906, 5·378 inches on 46 days in 1905, 7·938 inches on 55 days in 1904, 9·126 inches on 61 days in 1903, 5·114 inches on 43 days in 1902, 5·656 inches on 46 days in 1901, and a thirty-five years' (1871–1905, inclusive) average of 6·130 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, reports that the mean height of the barometer was 29·806 inches, the lowest reading observed being 29·094 inches at 9 p.m. of the 8th, the highest, 30·193 inches at 9 p.m. of the 14th. The mean temperature was 42·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 42·1°. The screened thermometers rose to 57·9° on the 8th, and fell to 28·1° on the 5th. The grass minimum was 20·9° on the 5th, while the black bulb *in vacuo* rose in the sun to 100·8° on the 22nd. The mean daily maximum was 48·6°; the mean daily minimum, 36·1°; and the mean daily minimum on the grass, 30·6°. Rain fell on 20 days to the amount of 2·765 inches, ·701 inch being measured on the 5th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 104·0, giving a daily overage of 3·4 hours. There were 8·1 hours of bright sunshine on the 25th. The mean temperature of the soil at 9 a.m. at a depth of one foot was 41·7°; at a depth of 4 feet, it was 43·9°. During the month the subsoil temperature at 4 feet decreased from 44·5° on the 1st to 43·1° on the 8th, and then increased from 43·1° on the 8th to 44·8° on the 31st.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, 3·130 inches of rain fell on 17 days. The maximal fall in 24 hours was ·78 inch on the 5th.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded a rainfall of 3·51 inches on 21 days, the maximum in 24 hours being ·78 inch on the 5th. The mean temperature of the month was 41°, the extremes being—lowest, 28°, on the 4th; highest, 59°, on the 8th. The total rainfall at Clonsilla, Greystones, since January 1, equals 5·99 inches on 46 days.

Dr. L. T. Burra, Resident Medical Officer, reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 3·814 inches on 23 days, the maximal fall in 24 hours being ·925 inch on the 5th. The mean air temperature was 43·5°—the extremes being—highest, 57·1° on the 8th; lowest, 31·8°, on the 5th.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 3·590 inches of rain on 22 days, the maximum in 24 hours being ·840 inch on the 5th. At this station the rainfall in the first quarter of 1908 equals 6·907 inches on 63 days, compared with 6·398 inches on 48 days in 1905, 7·810 inches on 56 days in 1906, and 2·958 inches on 41 days in 1907.

Mr. T. Bateman returns the rainfall at the Green, Malahide, Co. Dublin, as 2·45 inches on 20 days, compared with 3·473 inches on 24 days in 1905, 1·071 inches on 15 days in 1906, and 1·677 inches on 15 days in 1907. The greatest rainfall in 24 hours was ·565 inch on the 5th. The extremes of temperature in the shade were—highest, 55°, on the 8th; lowest, 24·5°, on the 4th; the mean temperature being 39·1°.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 24 days to the amount of 3·56 inches, compared with 2·20 inches on 13 days in 1901, 1·98 inches on 18 days in 1902, 4·53 inches on 28 days in 1903, 2·50 inches on 21 days in 1904, 3·31 inches on 28 days in 1905, 1·80 inches on 17 days in 1906, and 1·62 inches on 18 days in 1907. The greatest daily rainfall was ·89 inch on the 5th. The temperature in the shade ranged from 55° on the 8th to 30° on the 2nd and 5th. The mean shade temperature was 41·8°, compared with 41·2° in 1901, 46·4° in 1902, 45·7° in 1903, 41·1° in 1904, 45·0° in 1905, 43·9° in 1906, and 46·3° in 1907. Since January 1st, 1908, the rain fall at this station amounts to 7·01 inches on 63 days, compared with 6·71 inches on 40 days in the first quarter of 1901, 7·02 inches on 43 days in 1902, 11·36 inches on 62 days in 1903, 10·14 inches on 67 days in 1904, 6·76 inches on 56 days in 1905, 8·67 inches on 56 days in 1906, and 3·45 inches on 38 days in 1907.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21, Leeson Park, Dublin, as 3·260 inches on 23 days, ·850 inch being measured on the 5th.

Mr. W. Miller registered 4·00 inches of rain at Cork on 21 days. The greatest fall in 24 hours was ·90 inch on the 21st. The rainfall was 1·33 inches in excess of the average for March. The rainfall of the first quarter of 1908 was 7·67 inches, or 2·63 inches less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 6·48 inches of rain fell there in March on 25 days, 1·43 inches being measured on the 21st, 1·12 inches on the 30th, and ·77 inch on the 5th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 24 days to the total amount of 2·124 inches, the largest measurement being ·345 inch on the 5th. The duration of bright sunshine was 116·9 hours, of which 9·3 hours occurred on the 25th.

APRIL.—A cold month, with prevalent polar winds. Not since 1876 has such a spell of cold weather been recorded in April as that which made memorable the Easter Week of 1908. The remarkable point about this cold snap is its occurrence in one of the coldest—and most persistently cold—springs of recent times. Last month (March) was unsettled, rainy, but—above all—cold: its mean temperature was only half a degree (Fahrenheit) above that of January of this year, and was actually 2·8° below that of its predecessor, February. And April has been proportionately severe, while the defect in temperature in fact increased as the month advanced. In the course of Good Friday, the 17th, an energetic atmospheric depression suddenly formed over Denmark and its vicinity. This disturbance, with its satellite depressions, drew a polar air current southwards from Arctic regions, and this frigid current daily gathered strength. Frost set in over Scandinavia on Easter Day, became severe next day, and spread to Central Europe on Tuesday, the 21st. Another cold wave swept south-eastwards from Iceland on Wednesday (at 8 a.m. the thermometer read 24° at Thorshavn in the Faroe). On Thursday the frost wave passed over Scotland, and on Friday the bitter cold reached Ireland and England—snow and hail fell in large quantities, and intense night-frosts threatened the promise of spring. In Dublin the mean temperature of Friday, the 24th, was 32·9°, or 14·7° below the average, the extremes being—lowest, 25·1°; highest, 40·7°. Saturday dawned while a snowstorm was raging, but the weather improved as the day advanced, and the afternoon was fine, dry and bright. The cold weather moderated after the 26th, and the mean temperature of Thursday, the 30th, was 55·8°.

In Dublin the arithmetical mean temperature (44·7°) was 2·9° below the average (47·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·3°. In the forty-four years ending with 1908, April was coldest in 1879 (the cold year) (M. T. = 44·5°), and warmest in 1893 (M. T. = 51·4°). In 1907 the M. T. was 47·2°.

The mean height of the barometer was 29·994 inches, or 0·144 inch above the average value for April—namely, 29·850 inches. The mercury rose to 30·490 inches at 9 p.m. of the 6th, and fell to 29·312 inches at 3 p.m. of the 24th. The observed range of atmospheric pressure was, therefore, 1·178 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·3°, or 3·1° above the value for March, 1908. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·476), the value is 44·4°, or 2·9° below the average mean temperature for April, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (47·3°). The arithmetical mean of the maximal and minimal readings was 44·7°, compared with a thirty-five years' (1871–1905, inclusive) average of 47·6°. On the 30th the thermometer in the screen rose to 63·4°—wind, S.W.; on the 24th the temperature fell to 25·1°—wind, W.N.W. The minimum on the grass was 22·9° on the 24th.

The rainfall was 2·337 inches, distributed over 16 days. The average rainfall for April in the thirty-five years, 1871–1905, inclusive, was 1·940 inches, and the average number of rainy days was 16. The rainfall, therefore, was considerably in excess of the average, while the number of rainy days exactly equalled it. In 1877 the rainfall in April was very large—4·707 inches on 21 days. On the other hand, in 1873, only ·498 inch was measured on 8 days. In 1907, 2·622 inches fell on 22 days.

Fog was observed on the 8th, 12th, and 13th. High winds were noted on 5 days, but never reached the force of a gale. Hail fell on the 4th, 22nd, 23rd, and 24th; snow on the 23rd, 24th, and 25th. The temperature rose above 60° in the screen on only one day—the 30th. It failed to reach 50° on 13 days. It fell to 32° in the screen on 5 days, and on 10 nights it fell to or below 32° on the grass. The mean lowest temperature on the grass was 35·4°, compared with 36·7° in 1907, 33·6° in 1906, 37·3° in 1905, 39·1° in 1904, 37·0° in 1903, 36·8° in 1902, 37·3° in 1901, and only 31·6° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 8·704 inches on 74 days, compared with 6·288 inches on 64 days in 1907, 9·120 inches on 77 days in 1906, 7·844 inches on 71 days in 1905, 9·056 inches on 74 days in 1904, 10·176 inches on 78 days in 1903, 7·175 inches on 59 days in 1902, 6·520 inches on 58 days in 1901, only 3·203 inches on 46 days in 1891, and a thirty-five years' (1871–1905) average of 8·070 inches on 66 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. William J. Good, returns the mean height of the barometer as 29·995 inches, the highest reading observed being 30·492 inches at 9 p.m. of the 6th, the lowest, 29·391 inches at 9 a.m. of the 25th. The mean temperature was 44·5°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 44·4°. Rain fell on 12 days to the amount of 2·183 inches, ·820 inch being measured on the 27th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 138·8, giving a daily average of 4·6 hours. The corresponding figures for April, 1904, were 168 hours and 5·6 hours; for 1905, 105 hours and 3·5 hours; for 1906, 182·0 hours and 6·1 hours; and for 1907, 116·7 hours and 3·9 hours. The highest temperature in the shade was 64·0° on the 30th, the lowest was 24·3° on the 24th. The highest reading of the black bulb *in vacuo* thermometer (solar radiation) was 111·0° on the 19th. The lowest temperature on the grass (terrestrial radiation) was 17·9° on the 24th. The mean earth temperatures at 9 a.m. were—at a depth of one foot, 45·3°, at a depth of 4 feet, 45·8°.

Dr. Arthur G. Price recorded 2·60 inches of rain on 15 days at Clonsilla, Greystones, the largest measurement in 24 hours being 1·04 inches on the 27th. Snow fell on the 22nd, 23rd, 24th and 25th. The thermometer rose to 62° on the 30th, having fallen to 25° on the 23rd. The mean maximum was 50·5°, the mean minimum 37·2°, and the mean temperature 43·9°. The thermometer fell to or below 32° F. on the 6th (30°), 9th (32°), 22nd (31°), 23rd (25°), 24th (26°), and 25th (29°).

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall amounted to 2·030 inches on 14 days, compared with 2·610 inches on 18 days in 1907, 1·755 inches on 9 days in 1906, 2·835 inches on 18 days in 1905, only ·930 inch on 14 days in 1904, 1·165 inches on 9 days in 1903, 3·105 inches on 14 days in 1902, and 2·800 inches on 15 days in 1901. The heaviest fall in 24 hours was 1·130 inches on the 27th. The total rainfall in 1908, up to April 30th, was 8·005 inches on 54 days, compared with 5·700 inches on 54 days in 1907, 9·420 inches on 50 days in 1906, 8·495 inches on 59 days in 1905, 9·037 inches on 68 days in 1904, 12·385 inches on 63 days in 1903, 9·215 inches on 48 days in 1902, and 10·060 inches on 56 days in 1901.

Dr. Launcelot T. Burra, Resident Medical Officer at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, reports that the rainfall at that place was 2·856 inches distributed over 18 days, the maximal fall in 24 hours being 1·200 inches on the 27th. The mean temperature of the air was 46·2°, the thermometer in the screen having risen to 61·2° on the 4th and fallen to 29·3° on the 24th.

Dr. Arthur S. Goff reports that the rainfall at Lynton, Dundrum, Co. Dublin, was 3·14 inches on 20 days, compared with 2·43 inches on 23 days in 1907, 1·68 inches on 17 days in 1906, 3·14 inches on 24 days in 1905, 1·48 inches on 18 days in 1904, 1·35 inches on 16 days in 1903, 2·63 inches on 16 days in 1902, and 1·19 inches on 12 days in 1901. The greatest daily rainfall was 1·46 inches on the 27th. The mean shade temperature was 44·5°, compared with 48·3° in 1901, 46·6° in 1902, 45·9° in 1903, 48·9° in 1904, 46·4° in 1905, 45·4° in 1906, and 46·4° in 1907. The thermometric range was from 26° on the 24th to 67° on the 30th. Snow fell on the 22nd and three following days.

Mr. T. Bateman, of The Green, Malahide, Co. Dublin, returns the rainfall at 1·803 inches on 12 days, compared with 2·313 inches on 19 days in 1907, 1·336 inches on 13 days in 1906, and 1·773 inches on 22 days in 1905. The greatest fall in 24 hours was ·87 inch on the 29th. The shade mean temperature was 42·1°, compared with 44·0° in 1907, 43·6° in 1906, and 44·8° in 1905, the extremes being—highest, 63° on the 30th; lowest, 20° on the 23rd and 24th.

At 21, Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., measured 2·520 inches on 16 days, the largest amount recorded in 24 hours being 1·040 inches on the 27th.

The rainfall recorded by Miss Muriel E. O'Sullivan at White Cross, Stillorgan, was 2·591 inches on 15 days, compared with 2·458 inches on 23 days in 1907, 1·700 inches on 19 days in 1906, and 3·122 inches on 24 days in 1905. The maximum in 24 hours was 1·060 inches on the 27th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 20 days to the amount of 2·256 inches, the greatest measurement in 24 hours being ·660 inch on the 29th. The total amount of bright sunshine was 155·1 hours, of which 11·4 hours fell on the 6th, the brightest day of the month.

In Cork, according to Mr. W. Miller, the rainfall amounted to 2·27 inches on 13 days, ·83 inch being measured on the 29th. Since January 1, 1908, 9·94 inches of rain have fallen in Cork against an average, for the first four months of the year, of 13·04 inches.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., recorded 4·56 inches of rain on 22 days. The heaviest falls in 24 hours were ·77 inch on the 27th, ·41 inch on the 28th, and 1·68 inches on the 29th. The month was fine and dry up to the 23rd, only an inch of rain falling in that time. The last week was very wet and cold. Snow and hail showers fell on the 22nd and three following days. The rainfall at Dunmanway in the four months ended April 30 amounted to 20·41 inches.

MAY.—May, 1908, was a most favourable month. It is true that in Dublin there were as many as 21 "rain days," but the total precipitation was small—1·374 inches, and it was a case of sunshine and showers. With the coming of the month Winter passed away, and the first two days were very fine, warm and bright, so presenting a striking contrast to the inclement weather of April. No very high temperatures were recorded during the month—on the other hand, the thermometer on no occasion fell below 41·0° in the screen and 37·1° on the grass. Further, on the very day—the 7th—on which these low temperatures were observed the thermometer rose to 60·0° in the screen. It is noteworthy that the advance in mean temperature between April and May was no less than 10·5°—from 44·7° to 55·2°.

In Dublin the arithmetical mean temperature (55·2°) was 3·0° above the average (52·2°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 54·3°. In the forty-four years ending with 1908, May was coldest in 1869 (M. T. = 48·2°), and warmest in 1893 (M. T. = 56·7°). In 1907 the M. T. was 51·4°.

The mean height of the barometer was 29·913 inches, or 0·076 inch below the corrected average value for May—namely, 29·989 inches. The mercury rose to 30·516 inches at 9 p.m. of the 27th, having fallen to 29·144 inches at 4 p.m. of the 5th. The observed range of atmospheric pressure was, therefore, 1·372 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·3°, or 10·0° above the value for April, 1908—44·3°. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·47), the value is 54·8°, or 3·0° above the average mean temperature for May, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (51·8°). The arithmetical mean of the maximal and minimal readings was 55·2°, compared with a thirty-five years' average of 52·2°. On the 17th the thermometer in the screen rose to 68·0°—wind, W.S.W.; on the 7th the temperature fell to 41·0°—wind, W. The minimum on the grass was 37·1°, also on the 7th.

The rainfall amounted to 1·374 inches, distributed over 21 days. The average rainfall for May in the thirty-five years, 1871–1905, inclusive, was 1·970 inches, and the average number of rainy days was 15. The rainfall was, therefore, considerably below, while the rainy days were much above, the average. In 1886 the rainfall in May was very large—5·472 inches on 21 days; in 1869, also, 5·414 inches fell on 19 days. On the other hand, in 1895, only ·177 inch was measured on but 3 days. In 1896 the fall was only ·190 inch on 7 days. In 1907, 3·211 inches fell on 17 days.

A solar halo appeared on the 2nd and again on the 16th. A lunar halo was seen on the 13th. High winds were noted on 6 days, but never attained the force of a gale. Hail fell on the 6th, 10th, 12th, 21st and 22nd. Thunderstorms occurred on the 12th and 31st.

During the month the thermometer did not fall below 41° in the screen, or below 37·1° on the grass. The mean minimal temperature on the grass was 45·2°, compared with 41·6° in 1907, 41·9° in 1906, 42·5° in 1905, 42·6° in 1904, 44·3° in 1903, 40·3° in 1902, 41·7° in 1901, and 37·6° in 1894. The maximum reached or exceeded 60° on 21 days, but never fell short of 50°. The absolute maximum was 68·0° on the 17th.

The rainfall in Dublin during the five months ended May 31st amounted to 10·078 inches on 95 days, compared with 9·499 inches on 81 days in 1907, 11·592 inches on 97 days in 1906, 9·026 inches on 81 days in 1905, 11·741 inches on 92 days in 1904, 12·560 inches on 95 days in 1903, 9·973 inches on 81 days in 1902, 7·724 inches on 67 days in 1901, 5·971 inches on 70 days in 1896, and a thirty-five years' average of 10·040 inches on 81 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. J. E. W. Flood, Sch., returns the mean height of the barometer as 29·917 inches, the highest reading observed being 30·531 inches at 9 p.m. of the 27th, the lowest, 29·174 inches at 9 p.m. of the 5th. The arithmetical mean temperature was 54·9°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 54·4°. Rain fell on 16 days to the amount of 1·206 inches, ·220 inch being measured on the 7th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 193·9, giving a daily average of 6·3 hours. The corresponding figures for May, 1904, were 192·5 hours and 6·2 hours; for 1905, 215·7 hours and 7·0 hours; for 1906, 132·5 hours and 4·3 hours; and for 1907, 173·0 hours and 5·6 hours, respectively. The mean earth-temperature at 9 a.m. was 53·5° at a depth of one foot below the surface, 50·0° at 4 feet. The corresponding values for 1907 were 51·8° and 49·8°. The highest temperature recorded by the black bulb *in vacuo* (solar radiation) was 125·2° on the 17th; the lowest temperature on the grass (terrestrial radiation) was 31·8° on the 7th. The highest temperature in the shade was 70·8° on the 26th; the lowest was 41·0° on the 7th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall measured by Mr. R. Cathcart Dobbs, J.P., was 1·770 inches distributed over 10 (?) days—·280 inch falling on the 7th and ·270 inch on the 29th. The total fall since January 1st, 1908, equals 9·775 inches on 64 days, compared with 10·62 inches on 69 days in 1907, 11·665 inches on 66 days in 1906, 9·611 inches on 67 days in 1905, 12·027 inches on 84 days in 1904, 15·655 inches on 79 days in 1903, 11·750 inches on 68 days in 1902, 11·205 inches on 65 days in 1901, and only 5·716 inches on 52 days in 1896.

Dr. Arthur G. Price measured 1·97 inches of rain on 15 days at Clonsilla, Greystones, Co. Wicklow. The heaviest fall in 24 hours was ·32 inch on the 12th. Hail fell on that day. The mean temperature was 52·9°—highest being 70° on the 28th, lowest, 36° on the 6th.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·75 inches on 20 days, compared with 3·66 inches on 16 days in 1907, 2·74 inches on 21 days in 1906, 1·42 inches on 11 days in 1905, 2·46 inches on 18 days in 1904, 2·86 inches on 18 days in 1903, 3·26 inches on 22 days in 1902, and 1·09 inches on 10 days in 1901. The greatest daily measurement was ·29 inch on the 14th. Thunder was heard on the 12th and 30th. There were hail showers on the 21st, 22nd and 24th. The temperature in the shade ranged from 44° on the 7th and 22nd to 72° on the 27th. The mean temperature of the month was 56·2°, compared with 51·1° in 1907, 51·8° in 1906, 54·5° in 1905, 53·3° in 1904, 53·1° in 1903, 50·5° in 1902, and 52·6° in 1901.

Dr. Launcelot T. Burra reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 1·729 inches on 17 days, the greatest fall in 24 hours being ·340 inch on the 14th. The screened thermometers ranged from 70·0° on the 1st to 39·6° on the 22nd. The Mean Temperature at 9 a.m. and 9 p.m. was 53·3°.

At White Cross, Stillorgan, Miss Muriel E. O'Sullivan measured 1·276 inches of rain on 14 days, the maximum in 24 hours being ·302 inch on the 14th.

Dr. C. Joynt, F.R.C.P.I., returns the rainfall at 21, Leeson Park, Dublin, at 1·350 inches on 20 days, ·230 inch being measured on the 24th.

Mr. T. Bateman returns the rainfall at The Green, Malahide, Co. Dublin, at 1·427 inches on 17 days, compared with 3·200 inches on 18 days in 1907, and 3·174 inches on 19 days in 1906. The greatest rainfall in 24 hours was ·264 inch on the 7th. The extremes of temperature in the shade were —highest, 71·5°, on the 17th; lowest, 37°, on the 6th.

Mr. W. Miller registered 2·28 inches of rain at Cork on 16 days. The greatest fall in 24 hours was ·57 inch on the 4th. The rainfall was 0·10 inch in excess of the average for May. The rainfall of the first five months of 1908 was 12·22 inches, or 3·00 inches less than the average.

The Rev. Arthur Wilson, M.A., writing from Dunmanway Rectory, Co. Cork, states that 3·15 inches of rain fell there on 22 days, ·68 inch being measured on the 7th, ·55 inch on the 4th, and ·34 inch on the 13th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 20 days to the total amount of 1·788 inches, the largest measurement being ·290 inch on the 24th. The duration of bright sunshine was 200·1 hours, of which 15·0 hours occurred on the 28th.

JUNE.—A generally fine month, with a moderate rainfall. Temperature was almost persistently low in Ireland till the 22nd, when an anticyclone brought with it hot sunshine and cool easterly breezes. The nights were cold till the 26th. During the period ended on Saturday, the 6th, very hot weather prevailed on the Continent, while it was comparatively cool in Ireland and Scotland. On Wednesday, the 3rd, the thermometer touched 81° at Nottingham, Bath, and Oxford. In the second week cool but not unfavourable weather prevailed, considerable falls of rain taking place in the Dublin district on Thursday and Saturday. The third week was distinctly cold, with much cloud, till Friday, and variable winds from polar points (N.W. and N.E.). On the 19th an extraordinary rainfall of 7·21 inches was reported from Hernösand in Sweden. The fourth week was characterised by splendid weather, except on Monday, the 22nd, when there was a copious rainfall in Dublin and its neighbourhood. The closing days of the month were brilliantly fine, and a partial eclipse of the sun was seen in an absolutely cloudless sky on the afternoon of Sunday, the 28th.

In Dublin the arithmetical mean temperature (57·0°) was below the average (57·9°) by 0·9°, the mean dry-bulb readings at 9 a.m. and 9 p.m. were 56·9°. In the forty-four years ending with 1908, June was coldest in 1907 (M. T. = 55·4°), in 1882 (M. T. = 55·8°), and in 1879 ("the cold year") (M. T. = 55·9°). It was warmest in 1887 (M. T. = 62·3°); (in 1896 (M. T. = 61·4°); and in 1899 (M. T. = 61·3°). June, 1907, established a record for coldness.

The mean height of the barometer was 30·084 inches, or 0·167 inch above the corrected average value for June—namely, 29·917 inches. The mercury rose to 30·437 inches at 9 a.m. of the 24th, having fallen to 29·441 inches at 9 p.m. of the 13th. The observed range of atmospheric pressure was, therefore, 0·996 inch.

The mean temperature deducted from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56·9°, or 2·6° above the corresponding M. T. for May, 1908. Using the formula, *Mean Temp. = Min.* + (*Max. — Min.* × ·465), the value was 56·5°, or 0·9° below the average mean temperature for June, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (57·4). The arithmetical mean of the maximal and minimal readings was 57·0°, compared with a thirty-five years' average of 57·9°. On the 29th the thermometer in the screen rose to 71·3°—wind, E.; on the 7th the temperature fell to 44·6°—wind, N.W. The minimum on the grass was 41·0° on the 15th.

The rainfall amounted to 1·651 inches on 12 days. The average rainfall for June in the thirty-five years, 1871–1905, inclusive, was 1·990 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days were below the average. In 1878 the rainfall in June was very large—5·058 inches on 19 days; in 1879, also, 4·046 inches fell on 24 days. On the other hand, in 1889, only ·100 inch was measured on 6 days. In 1887 the rainfall was only ·252 inch, distributed over 5 days. In 1907, 2·837 inches fell on no less than 27 days.

High winds were noted on only 3 days, and never reached the force of a gale. A splendid prismatic solar halo was seen at noon on the 8th. Temperature exceeded 70° in the screen on 3 days. Hail fell on the 16th. There was a fog on the morning of the 4th.

The rainfall in Dublin during the six months ending June 30th amounted to 11·729 inches on 107 days, compared with 12·336 inches on 108 days in 1907, 12·641 inches on 109 days in 1906, 10·201 inches on 92 days in 1905, 12·817 inches on 102 days in 1904, 15·054 inches on 108 days in 1903, 12·344 inches on 98 days in 1902, 9·352 inches on 80 days in 1901, only 6·741 inches on 67 days in 1887, and a thirty-five years' average of 12·030 inches on 96 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. J. E. W. Flood, Sch., reports that the mean height of the barometer was 30·083 inches, the highest reading observed being 30·435 inches at 9 p.m. of the 24th, the lowest, 29·447 inches at 9 p.m. of the 13th. The arithmetical mean temperature was 56·4°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 56·9°. The thermometer rose to 71·2° in the shade on the 22nd, and fell to 44·5° on the 7th. The grass minimum was 34·0° on the 15th. The mean maximal temperature in the sun (solar radiation) shown by the black bulb *in vacuo* thermometer was 107·6°, the absolute maximum being 128·8° on the 14th. Rain fell on 9 days to the amount of 1·360 inches, ·313 inch being measured on the 2nd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 181·4, giving a daily average of 6·0 hours. The corresponding figures for 1905 were 217·6 hours and 7·3 hours, for 1906, 210·3 hours and 7·0 hours, and for 1907, 129·4 hours and 4·3 hours. The mean earth temperature read at 9 a.m. was 57·6° at a depth of 1 foot below the surface of the ground, 54·1° at a depth of 4 feet.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 1·710 inches on 9 days, compared with 3·470 inches on 23 days in 1907, ·870 inch on 7 days in 1906, 1·500 inches on 10 days in 1905, 2·280 inches on 10 days in 1904, 1·785 inches on 11 days in 1903, and 3·341 inches on 16 days in 1902. The heaviest rainfall in 24 hours was ·590 inch on the 17th. The total fall since January 1 has been 11·485 inches on 73 days, compared with 14·090 inches on 92 days in 1907, 12·535 inches on 73 days in 1906, 11·111 inches on 77 days in 1905, 14·307 inches on 94 days in 1904, 17·440 inches on 90 days in 1903, 15·091 inches on 84 days in 1902, 13·670 inches on 75 days in 1901, and only 7·356 inches on 61 days in 1896.

At Clonsilla, Greystones, Co. Wicklow, Dr. Arthur G. Price measured 1·56 inches of rain on 10 days; ·53 inch being recorded on the 17th. The mean temperature was 56°, the extremes being—highest, 72°, on the 22nd, 28th, and 29th; lowest, 40°, on the 14th.

Dr. Launcelot T. Burra reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, rain fell on 10 days to the amount of 1·761 inches, the maximal fall in 24 hours being ·798 inch on the 17th. The mean temperature for the month was 56·0°, the extremes being—highest, 71·5° on the 27th; lowest, 41·2° on the 15th and 21st. The June rainfalls in recent years at this station were—1903, 2·004 inches on 12 days; 1904, 2·494 inches on 12 days; 1905, 2·051 inches on 13 days; 1906, ·831 inch on 13 days; 1907, 3·703 inches on 27 days.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 1·73 inches on 12 days, compared with 2·67 inches on 27 days in 1907, 1·26 inches on 15 days in 1906, 1·51 inches on 12 days in 1905, 1·22 inches on 14 days in 1904, 1·54 inches on 12 days in 1903, 3·08 inches on 19 days in 1902, and 1·71 inches on 13 days in 1901. The greatest daily fall was ·39 inch on the 17th, and again on the 22nd. The mean shade temperature was 58·9°. The thermometric range was from 77° on the 28th to 45° on the 21st.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, was 1·335 inches on 15 days, compared with 2·872 inches on 23 days in 1907. The heaviest fall in 24 hours was ·455 inch on the 2nd. The mean shade temperature was 55·9°, the extremes being—highest, 72·5° on the 22nd; lowest, 41·5° on the 4th. The M. T. was 58·4° in 1905, 57·4° in 1906, and 54·2° in 1907.

Dr. C. Joynt returns the rainfall at 21, Leeson Park, Dublin, at 1·655 inches on 12 days, ·355 inch having been recorded on the 2nd.

Mr. R. O'B. Furlong, C.B., supplies the following Table of the rainfall at Cloneevin, Killiney, in the months, February to June, 1908:—

Month.	Rainfall in inches.	Days.	Maximum.	Averages 23 years 1885 to 1907 Inches (inclusive).
February	·92	17	·15 in. on 16th	1·788 on 14 days.
March	3·16	24	·69 „ 5th	1·896 „ 16·6 „
April	2·80	18	·81 „ 27th	1·833 „ 14 „
May	1·21	13	·25 „ 12th	2·007 „ 13·9 „
June	1·50	10	·58 „ 2nd	1·783 „ 13·3 „

The Rev. Arthur Wilson, M.A., reports a rainfall of only 1·19 inches on 13 days at the Rectory, Dunmanway, Co. Cork. On the 11th ·34 inch was measured.

Mr. W. Miller returns the rainfall at Cork at only ·73 inch on but 7 days—this amount falling short of the average for June by no less than 2·03 inches. The greatest rainfall in 24 hours was ·32 inch on the 11th. The rainfall of the first six months of 1908 in Cork was 12·95 inches, or 5·03 inches below the average.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell in June on 15 days to the total amount of 1·404 inches, ·295 inch being registered on the 2nd. The duration of bright sunshine was 182·6 hours, the most in one day being 14·4 hours on the 29th.

JULY.—A generally favourable month—warm and with an average rainfall distributed over comparatively few days. At the beginning and also towards the close an anticyclone extended over the British Islands, and beautiful summer-like weather prevailed in consequence. Between the 7th and the 18th, on the contrary, the distribution of atmospheric pressure over North-western Europe was cyclonic, and the weather was accordingly unsettled, particularly in England, where heavy rains were experienced in the week ended Saturday, the 18th—London (Westminster) had 2·31 inches and Greenwich Observatory 2·77 inches, rain falling at both places on every day of the week. In Dublin the measurement for the same period was ·68 inch on 5 days. In this city the heaviest rains of the month fell on the 7th and 8th, ·962 inch being recorded, or 46 per cent. of the total rainfall for the month. In the early morning and after sunset on the 1st a strangely bright twilight occurred, the phenomenon being, no doubt, caused by refraction and reflection of the sun's rays from luminous filmy cirri or dust clouds floating at an unusual height in the atmosphere.

In Dublin the arithmetical mean temperature (61·0°) was 0·5° above the average of the 35 years, 1871–1905 (60·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 60·3°. In the forty-four years ending with 1908, July was coldest in 1879 ("the cold year") (M. T. = 57·2°). It was warmest in 1905 (M. T. = 63·8°); in 1887 (M. T. = 63·7°); in 1868 ("the warm year") (M. T. = 63·5°); in 1901 (M. T. = 63·5°); and in 1900 (M. T. = 63·4°). In 1907 the M. T. was 59·6°.

The mean height of the barometer was 29·987 inches, or 0·072 inch above the corrected average value for July—namely, 29·915 inches. The mercury rose to 30·465 inches at 9 a.m. of the 29th, and fell to 29·295 inches at 7 a.m. of the 17th. The observed range of atmospheric pressure was, therefore, 1·170 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 60·3°, or 3·4° above the value for June, 1908. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·465), the value was 60·5°, or 0·4° above the average mean temperature for July, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (60·1°). The arithmetical mean of the maximal and minimal readings was 61·0°, compared with a thirty-five years' average of 60·5°. On the 4th the thermometer in the screen rose to 74·7°—wind, E.; on the 15th the temperature fell to 49·0°—wind, W. This reading was repeated on the 19th, wind, N.W. The minimum on the grass was 44·3°, also on the 19th.

The rainfall was 2·080 inches, distributed over 13 days. The average rainfall for July in the thirty-five years, 1871–1905, inclusive, was 2·68 inches, and the average number of rain-days was 17. The rainfall, therefore, and also the rain-days were below the average. In 1880 the rainfall in July was very large—6·087 inches on 24 days; in 1896, also, 5·474 inches fell on 18 days. On the other hand, in 1870, only ·539 inch was measured on 8 days; in 1869 the fall was only ·739 inch on 9 days; and in 1868, ·741 inch fell on but 5 days. In 1907, 2·022 inches fell on 19 days.

High winds were noted on 8 days, but never attained the force of a gale. Temperature reached or exceeded 70° in the screen on 9 days, compared with 9 days in 1907, 10 in 1906, 17 in 1905, 10 in 1904, and 7 in both 1902 and 1903. The thermometer failed to reach 60° on the 14th, when the maximum was 59·4°. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68·7°.

A solar halo was seen on the afternoons of the 9th and 30th. A thunderstorm occurred on the 16th; thunder was heard on the 4th and 25th; and lightning was seen on the 4th after dusk. There was a fog on the early morning of the 5th.

The rainfall in Dublin during the seven months ending July 31st amounted to 13·809 inches on 120 days, compared with 14·358 inches on 127 days in 1907, 13·664 inches on 122 days in 1906, 11·022 inches on 109 days in 1905, 13·905 inches on 117 days in 1904, 19·072 inches on 131 days in 1903, 15·507 inches on 115 days in 1902, 11·432 inches on 93 days in 1901, only 7·935 inches on 80 days in 1887, and a thirty-five years' (1871–1905) average of 14·71 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. J. E. W. Flood, Sch., reports that the mean height of the barometer was 29·988 inches, the range of atmospheric pressure being from 29·333 inches at 9 a.m. of the 17th to 30·461 inches at 9 a.m. of the 29th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 60·9°. The arithmetical mean of the daily maximal and minimal temperatures was 61·3°. The screened thermometers rose to 74·7° on the 30th, and fell to 49·0° on the 15th and 19th. On the 29th the grass minimum was 38·5°. On the 30th the black bulb *in vacuo* rose to 131·9°. Rain fell on 11 days to the amount of 2·019 inches, the greatest fall in 24 hours being ·525 inch on the 7th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 174·3 hours, of which 13·3 hours occurred on the 21st. The mean daily duration was 5·6 hours. In July, 1904, there were 201 hours of bright sunshine, in July, 1905, 162·2 hours, in July, 1906, 184·8 hours, and in July, 1907, 178·1 hours. The mean sub-soil temperatures at 9 a.m. were—at 1ft., 61·6°; at 4 ft., 57·7°. The one-foot thermometer ranged between 59·0° on the 19th and 64·8° on the 4th. The four-feet thermometer ranged from 56·3° on the 1st to 58·2° on the 31st.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 2·55 inches on 15 days. The maximal fall in 24 hours was ·70 inch, measured on the 7th. The mean temperature was 62·9°, the range being from 80° on the 1st and 2nd to 51° on the 15th, 19th and 29th. Thunder occurred on the 16th. In July, 1901, 2·65 inches of rain fell at this station on 11 days; in 1902, 4·27 inches on 19 days; in 1903, 3·66 inches on 24 days; in 1904, 1·22 inches on 17 days; in 1905, ·98 inch on 20 days; in 1906, 1·25 inches on 18 days, and in 1907, 1·79 inches on 16 days.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'Brien Furlong, C.B., reports that the rainfall was 2·30 inches on 13 days, compared with a twenty-three years' (1885–1907) average of 2·413 inches on 15·3 days. On the 7th the rainfall was ·91 inch. In July, 1907, 1·94 inches fell on 18 days; in 1906, ·97 inch fell on 14 days; in 1905, 1·03 inches fell on 15 days; in 1904, only ·77 inch on 15 days; in 1903, 3·54 inches on 19 days; in 1902, 3·64 inches on 13 days; in 1901, 2·80 inches on 13 days. Since January 1, 1908, 13·53 inches of rain have fallen on 114 days at this station, compared with 13·54 inches on 95 days in the corresponding 7 months of 1901, 16·90 inches on 111 days in 1902, 17·39 inches on 122 days in 1903, 13·69 inches on 110 days in 1904, 13·59 inches on 104 days in 1905, 12·92 inches on 118 days in 1906, and 13·61 inches on 114 days in 1907. The lowest July fall was ·70 inch on 9 days in 1885; the highest, 6·72 inches on 20 days in 1896.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·054 inches on 13 days. The largest daily fall was ·595 inch on the 24th. The mean shade temperature was 61·5°, the extremes being—highest, 74·5° on the 22nd; lowest, 44·0° on the 18th.

At the Ordnance Survey Office, Phœnix Park, rain fell on 14 days to the amount of 2·236 inches, the greatest rainfall in 24 hours being ·520 inch on the 8th. The total duration of bright sunshine was 182·4 hours, the longest daily sunshine being 14·5 hours on the 21st.

Mr. R. Cathcart Dobbs, J.P., reports that the rainfall at Knockdolian, Greystones, Co. Wicklow, was 2·505 inches on 11 days, the maximal daily fall being ·920 inch on the 7th. Since January 1, 1908, the rainfall at that station equals 13·990 inches on 84 days.

Dr. Arthur G. Price reports that at Clonsilla, Greystones, Co. Wicklow, rain fell on 12 days to the amount of 2·54 inches, the greatest fall in 24 hours being ·85 inch on the 7th. The mean maximal temperature in the shade was 67·8°, the mean minimal temperature in the shade was 51·1°, and the mean daily temperature was 59·5°. On the 4th the thermometer rose to 75·5° in the shade, on the 19th it fell to 45·0°.

At Cork Mr. W. Miller registered 2·40 inches of rain on 11 days, the fall being ·23 inch short of the average for July. The greatest rainfall in 24 hours was ·67 inch on the 24th. Since January 1, 1908, 15·35 inches of rain have fallen in Cork, the measurement being 5·26 inches short of the average for the first seven months of the year.

At the Rectory, Dunmanway, Co. Cork, the Rev. Arthur Wilson, M.A., recorded a rainfall of 5·64 inches on 13 days. The heaviest falls in 24 hours were—1·63 inches on the 4th, ·92 inch on the 24th, ·84 inch on the 9th, and ·70 inch on the 15th. The downpour on the 4th, which yielded 1·63 inches, lasted only 40 minutes. At 2.30 p.m., after a very hot morning, there was a terrific shower of rain and hail, with thunder and lightning. The hailstones were oval in shape, some of them being as large as walnuts. At the distance of one mile in each direction only a slight shower fell. The first 4 days of the month and the last 5 days were extremely hot.

AUGUST.—With the exception of a passing interruption on the 9th, 10th, and 12th, very fine, dry weather prevailed until the afternoon of the 20th, when a rainstorm of great intensity visited the shores of the Irish Sea. Rain fell in fitful showers from 2 p.m., but at 7 p.m. a torrential downpour set in, lasting for some ten hours—the measurements to 9 a.m. of the 20th were 2·670 inches at Clonsilla, Greystones, Co. Wicklow; 2·600 inches at Knockdolian, Greystones; 2·130 inches at Fassaroe, near Bray, Co. Wicklow; 2·09 inches at Cloneevin, Killiney, Co. Dublin; 1·650 inches at Fitzwilliam Square, Dublin; and 1·610 inches in Trinity College, Dublin. These were the largest measurements recorded in the Dublin district since the memorable rainstorm of August 25, 1905, when 3·436 inches were registered at Fitzwilliam Square. On the 29th, ·481 inch of rain fell in two drenching showers mingled with hail. A cyclonic disturbance of great energy passed over Ireland on the 31st, causing heavy rain and a strong gale—at first from S.E., afterwards from W.

In Dublin the arithmetical mean temperature (59·1°) was below the average (59·7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58·0°. In the forty-four years ending with 1908, August was coldest in 1881 (M. T. = 57·0°), and warmest in 1899 (M. T. = 63·4°). In 1906 the M. T. was 63·2°; in 1907 it was 58·8°.

The mean height of the barometer was 29·973 inches, or 0·076 inch above the corrected average value for August—namely, 29·897 inches. The mercury rose to 30·422 inches at 9 a.m. of the 2nd, and fell to 29·085 inches at 4 p.m. of the 31st. The observed range of atmospheric pressure was, therefore, 1·337 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·0°. It was 2·3° below the value for July, 1908. Using the formula, *Mean Temp. = Min. + (Max. — Min. × ·47)*, the mean temperature was 58·7°, or 0·6° below the average mean temperature for August, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (59·3°). The arithmetical mean of the maximal and minimal readings was 59·1°, compared with a thirty-five years' average of 59·7°. On the 3rd the thermometer in the screen rose to 76·3°—wind, W.N.W.; on the 11th the temperature fell to 47·2°—wind, N.W. The minimum on the grass was 42·9° on the 17th.

The rainfall was 3·435 inches on 15 days. The average rainfall for August in the thirty-five years, 1871–1905, inclusive, was 3·24 inches, and the average number of rainy days was 18. The rainfall, therefore, was above the average, while the rain-days were below it. In 1900 the rainfall in August was very large—5·871 inches on 17 days; in 1889, also, 5·747 inches were registered on 22 days. On the other hand, in 1884, only ·777 inch was measured on 8 days. August, 1905, established a record for rainfall in this month in Dublin, for the measurement was 7·019 inches on 22 days, 3·436 inches having fallen on the 25th. In 1907, the rainfall was 2·230 inches on 19 days.

High winds were noted on 11 days, but attained the force of a gale on only one day—the 31st. Temperature reached 70° in the screen on 3 days, compared with 7 days in August, 1901, only one day in both 1902 and 1903, 9 days in 1904, one day in 1905, and 17 days in 1906, and only one day in 1907. A solar halo was seen on the 4th. Hail fell on the 29th. Aurora borealis was seen at 9 p.m. of the 29th.

The rainfall in Dublin during the eight months ending August 31st amounted to 17·244 inches on 135 days, compared with 16·588 inches on 146 days in 1907, 15·425 inches on 139 days in 1906, 18·041 inches on 131 days in 1905, 16·808 inches on 135 days in 1904, 21·872 inches on 157 days in 1903, 18·456 inches on 133 days in 1902, 14·384 inches on 106 days in 1901, 9·455 inches on 96 days during the same period in 1887, and a thirty-five years' average (1871-1905) of 17·950 inches on 131 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. J. E. W. Flood, Sch., reports that the mean height of the barometer was 29·972 inches. The range of atmospheric pressure was between 30·419 inches at 9 a.m. of the 2nd and 29·121 inches at 9 p.m. of the 31st. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58·6°. The arithmetical mean of the daily maximal and minimal temperatures was 59·1°. The screened thermometers rose to 76·8° on the 3rd, and fell to 47·0° on the 11th and 12th. On the 15th the grass minimum was 38·0°. On the 3rd the black bulb *in vacuo* rose to 127·0°. Rain fell on 14 days to the amount of 3·221 inches, the greatest fall in 24 hours being 1·610 inches on the 20th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 148·7 hours, of which 11·2 hours occurred on the 3rd, and 11·0 hours on the 6th. In August, 1904, there were 183·75 hours of bright sunshine, in 1905, 121·9 hours, in 1906, 176·9 hours, and in 1907, 151·4 hours. The mean earth temperatures were—at 1 ft., 60·5°; at 4 ft., 58·4°. The one-foot thermometer ranged between 62·9° on the 4th and 57·4° on the 31st. The four-feet thermometer ranged from 58·9° on the 6th and 11th to 57·8° on the 31st.

According to Mr. Robert O'Brien Furlong, C.B., at Cloneevin, Killiney, Co. Dublin, 3·67 inches of rain fell on 14 days. The maximal fall in 24 hours was 2·09 inches on the 20th. The average rainfall in August of the twenty-three years, 1885–1907, was 3·410 inches on 17·0 days. Since January 1, 1908, 17·20 inches of rain have fallen at this station on 128 days. From August 1 to 19, inclusive, only ·09 inch fell on 2 days (9th and 13th).

Dr. Christopher Joynt, F.R.C.P.I., returns the rainfall at 21, Leeson Park, at 3·280 inches, of which 1·840 inches fell on the 20th. The rain days were 15. In June, 2·175 inches were recorded at this station on 12 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, County Dublin, the rainfall was 3·73 inches on 17 days. The maximal fall in 24 hours was 1·93 inches on the 20th. The corresponding figures for 1901 were 3·11 inches on 16 days, for 1902, 2·73 inches on 18 days, for 1903, 2·78 inches on 25 days, for 1904, ·98 inch on 20 days, for 1905, 9·35 inches on 21 days, for 1906, 1·48 inches on 15 days, and for 1907, 2·51 inches on 19 days. The mean shade temperature was 60·0°, the range being from 77° on the 2nd and 3rd to 49° on the 17th. In August, 1901, the M. T. was 60·5°, in 1902, it was 58·7°, in 1903, 58·6°, in 1904, 60·5°, in 1905, 59·1°, in 1906, 63·6°, and in 1907, 59·8°.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·415 inches on 14 days; the heaviest fall in 24 hours was 1·26 inches on the 20th. In August, 1907, 2·326 inches fell on 20 days, the greatest fall in 24 hours being ·417 inch on the 2nd. The mean shade temperature was 57·3°, the extremes being—highest, 74·0° on the 8th and 9th; lowest, 40·0° on the 30th.

According to Mr. R. Cathcart Dobbs, J,P., at Knockdolian, Greystones, Co. Wicklow, the rainfall for August was 4·120 inches on 10 days, compared with 1·950 inches on 17 days in 1907, 1·765 inches on 13 days in 1906, 8·915 inches on 22 days in 1905, 2·875 inches on 20 days in 1904, 2·870 inches on 27 days in 1903, 3·520 inches on 16 days in 1902, and 3·625 inches on 15 days in 1901. The heaviest fall in 24 hours was 2·600 inches on the 20th. On the 31st ·960 inch fell. The total fall since January 1 amounts to 18·110 inches on 94 days, compared with 18·565 inches on 122 days in 1907, 15·455 inches on 99 days in 1906, 21·058 inches on 110 days in 1905, 18·577 inches on 129 days in 1904, 23·100 inches on 134 days in 1903, 23·161 inches on 111 days in 1902, and 19·685 inches on 100 days in 1901.

At Clonsilla, Greystones, Co. Wicklow, Dr. Arthur G. Price recorded a rainfall of 4·14 inches, distributed over 12 days. The greatest measurement in 24 hours was 2·67 inches on the 20th. From July 27th to August 19th, inclusive (24 days) no rain fell. From August 20th to the 31st rain fell daily (12 consecutive days). On the 31st the rainfall was ·89 inch. Since January 1, the rainfall at Clonsilla, Greystones, was 18·80 inches on 110 days. The mean temperature was 58·5°, the highest being 75° on the 3rd; the lowest 44° on the 29th and 31st.

At the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, Dr. Launcelot T. Burra measured 3·517 inches of rain on 12 days, the maximum in 24 hours being 1·907 inches on the 20th. The mean temperature for August was 59·2°, the extremes being—highest, 69·9° on the 3rd; lowest, 47·0 on the 18th.

In July, 2·341 inches of rain fell at this station on 11 days, the maximal fall in 24 hours being ·758 inch on the 7th. The mean temperature was 60·5°. On the 2nd, the screened thermometers rose to 74·7°; on the 15th, they fell to 45·0°.

According to Mr. W. Miller the rainfall in Cork City was 3·38 inches, or 0·12 inch less than the average, and the rain-days were 12. The greatest fall was 1·03 inches on the 31st. The mean temperature of the month was 58·0°, or 1·7° below the average. The thermometer rose to 74·5° on the 3rd and fell to 44·0° on the 12th. The rainfall for 1908 up to August 31 was 18·73 inches, compared with an average of 24·11 inches.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 4·95 inches on 13 days. The largest measurements in 24 hours were ·88 inch on the 26th, ·92 inch on the 31st, and ·68 inch on the 27th. The only rainfall from July 27 to August 19 was ·07 inch—namely, ·01 inch on night of the 8th, and ·06 inch on night of the 9th.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 16 days to the amount of 2·878 inches, the largest measurement in 24 hours being 1·210 inches on the 20th. The total duration of bright sunshine was 165·2 hours, the longest daily spell being 13·2 hours on the 16th.

SEPTEMBER.—An unsettled, cloudy and rainy, or showery, month. It was generally cool, but a remarkable spell of very unusual warmth for the time of year, which set in on the 27th, raised the mean temperature to the average for September. The dominant winds were S.W., W., and N.W., and these brought copious rains to Ireland, Scotland, and Wales, whereas the southern half of England enjoyed comparatively good weather. The month opened with a deep depression stretching from South Wales to the Tay, the barometer being as low as 29·02 inches at 4 a.m. of the 1st in Dublin. The general distribution of atmospheric pressure during the month was anticyclonic over the Continent, cyclonic in the Icelandic region—on the evening of Thursday, the 17th, the barometer fell to 28·45 inches at Seydisfjord, in the south-east of Iceland. The warmth of the last three days came with a strong S.S.W. wind, blowing along the western edge of an anticyclone which spread over England—and later over Ireland also—from Central Europe and France.

In Dublin the arithmetical mean temperature 56·0°) was 0·1° above the average (55·9°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 55·3°. In the forty-four years ending with 1908, September was coldest in 1886 and 1892 (M. T. = 53·0°), and warmest in 1865 (M. T. = 61·4°) and 1898 (M. T. = 60·2°). In 1907 the M. T. was 57·8°.

The mean height of the barometer was 29·885 inches, or 0·025 inch below the corrected average value for September—namely, 29·910 inches. The mercury rose to 30·236 inches at 9 a.m. of the 5th, having fallen to 29·020 inches at 4 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, 1·216 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55·3°, or 2·7° below the value for August, 1908. Using the formula, *Mean Temp.* = *Min.* + (*Max.* — *Min.* × ·476), the mean temperature was 55·7°, or precisely equal to the average mean temperature for September, calculated in the same way, in the thirty-five years, 1871–1905, inclusive (55·7°). The arithmetical mean of the maximal and minimal readings was 56·0°, compared with a thirty-five years' average of 55·9°. On the 30th the thermometer in the screen rose to 74·4° —wind, S.S.W.; on the 12th the temperature fell to 39·0°—wind, W.N.W. The minimum on the grass was 35·0°, also on the 12th.

The rainfall was 2·313 inches on 19 days. The average rainfall for September in the thirty-five years, 1871–1905, inclusive, was 2·210 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4·048 inches on, however, only 13 days; in 1896 no less than 5·073 inches fell on 23 days, establishing a record rainfall for September. On the other hand, in 1865, only ·056 inch was measured on but 3 days. In 1907, ·552 inch fell on 7 days.

High winds were noted on 12 days, but never attained the force of a gale. A solar halo was observed on the 12th, and a lunar halo was seen on the 15th.

The rainfall in Dublin during the nine months ending September 30th amounted to 19·557 inches on 154 days, compared with 17·140 inches on 153 days in 1907, 16·121 inches on 146 days in 1906, 19·266 inches on 145 days in 1905, 19·147 inches on 152 days in 1904, 25·269 inches on 174 days in 1903, 21·425 inches on 149 days in 1902, 18·070 inches on 124 days in 1901, only 10·968 inches on 112 days in 1887, and a thirty-five years' average of 20·160 inches on 146 days.

At the Normal Climatological Station in Trinity College, Dublin, the observer, Mr. R. A. Flood, reports that the mean height of the barometer was 29·885 inches. The range of atmospheric pressure was from 30·241 inches at 9 a.m. of the 5th to 29·151 inches at 9 p.m. of the 8th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56·2°. The arithmetical mean of the daily maximal and minimal temperatures was 56·3°. The screened thermometers rose to 75·8° on the 30th, having fallen to 38·8° on the 12th. On the latter date the grass minimum was 31·6°. On the 30th the black bulb *in vacuo* rose to 125·0°. Rain fell on 15 days to the amount of 2·214 inches, the greatest fall in 24 hours being ·470 inch on the 8th. The duration of bright sunshine according to the Campbell-Stokes recorder, was 101·0 hours, of which 8·2 hours occurred on the 29th. The mean earth temperatures were—at 1 ft., 56·1°; at 4 ft., 56·2°. The one-foot thermometer ranged from 58·8° on the 30th to 54·1° on the 12th. The four-feet thermometer ranged from 57·6° on the 1st to 55·4° on the 18th.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Cloneevin, Killiney, Co. Dublin, was 2·56 inches on 18 days, the maximum being ·37 inch on the 7th. The average September rainfall at this station in 23 years (1885–1907) was 1·935 inches on 12·7 days. Up to the 30th, from January 1st, 1908, 19·76 inches of rain had fallen on 146 days. In 1906 the September rainfall was only ·34 inch on 6 days, and in 1907 only ·52 inch on 7 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 3·600 inches on 21 days, compared with ·900 inch on 7 days in 1907, ·338 inch in 6 days in 1906, 1·055 inches on 10 days in 1905, 2·880 inches on 12 days in 1904, 3·950 inches on 20 days in 1903, 3·995 inches on 12 days in 1902, and 5·420 inches on 19 days in 1901. The heaviest falls in 24 hours were ·660 inch on the 19th and ·650 inch on the 7th. At Knockdolian the rainfall since January 1st, 1908, has been 21·710 inches on 115 days, compared with 19·465 inches on 129 days in 1907, 15·793 inches on 105 days in 1906, 22·113 inches on 120 days in 1905, 21·457 inches on 141 days in 1904, 27·050 inches on 154 days in 1903, 27·156 inches on 123 days in 1902, and 25·105 inches on 119 days in 1901.

At Clonsilla, Greystones, Dr. Arthur G. Price recorded a rainfall of 3·45 inches on 22 days. The greatest rainfall in 24 hours was ·60 inch on the 19th. Temperature was highest (70°) on the 6th and 7th, lowest (39°) on the 11th. The mean temperature was 54·1°.

Dr. Launcelot T. Burra reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 3·934 inches on 23 days. The maximal daily fall was ·740 inch, which was recorded on the 7th and again on the 19th. The thermometers in the shade rose to 67·3° on the 7th and fell to 41·1° on the 10th. The mean temperature of the month was 54·5°.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 2·90 inches on 18 days, compared with 5·03 inches on 18 days in 1901, 4·09 inches on 19 days in 1902, 4·33 inches on 21 days in 1903, 2·94 inches on 19 days in 1904, 1·07 inches on 15 days in 1905, ·62 inch on 8 days in 1906, and ·67 inch on 8 days in 1907. The greatest daily fall was ·49 inch on the 8th. The mean temperature in the shade was 56·6°, compared with 55·3° in 1903, 56·2° in 1904, 54·9° in 1905, 57·6° in 1906, and 58·2° in 1907. The screened thermometers rose to 75° on the 30th, and fell to 42° on the 12th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·983 inches on 19 days, the greatest fall in 24 hours being ·575 inch on the 7th. The mean shade temperature was 53·9°, the extremes being—highest, 67° on the 6th; lowest, 35° on the 11th. In September, 1907, the rainfall was ·602 inch on 7 days.

At 21, Leeson Park, Dublin, Dr. Christopher Joynt, F.R.C.P.I., registered 2·270 inches of rain on 19 days, the greatest fall in 24 hours being ·440 inch on the 8th. Exactly 20 inches of rain have fallen at this station in 1908 to September 30.

The Rev. Arthur Wilson, M.A., returns the rainfall at the Rectory, Dunmanway, Co. Cork, at 7·24 inches on 24 days, the heaviest falls in 24 hours being 1·00 inch on the 25th, ·91 inch on the 28th, ·82 inch on the 17th, and ·86 inch on the 7th. A wet, damp month on the whole, but with very fine, bright days.

Mr. Wm. Miller states that in the City of Cork the rainfall was 4·38 inches on 23 days, or 1·70 inches above the average for September. The rainfall was greatest on the 7th, when 0·72 inch was measured. In the 9 months ended September 30 the rainfall was 23·11 inches, or 3·68 inches less than the average.

The rainfall recorded at the Ordnance Survey Office, Phœnix Park, was 3·076 inches on 20 days, the greatest measurement in 24 hours being ·575 inch on the 8th. The total amount of sunshine at this station was 109 hours, the most registered on any one day being 8·5 hours on the 1st.

OCTOBER.—October, 1908, will be remembered as the warmest October on record within recent times. The mean temperature (55·4°) was 5·9° above the average. On 17 days, the thermometer rose to 60° or upwards in the screen—daily until the 15th. Once only did it fail to reach 50°—on the 24th, when the maximum was 48·4°. The mean minimum in the screen for the month was 50·6°, identical with the value for the previous month; and the mean minimum on the grass was as high as 46·5°, or actually 0·4° in excess of the figure recorded in September, 1908. The month was remarkable not only for its warmth, but also for its dampness—the mean relative humidity being as high as 89·5 per cent. Atmospheric pressure was, on the whole, high—30·038 inches, and in Dublin the barometer fell no lower than 29·725 inches. The explanation of the foregoing facts is to be found in the persistence of an anticyclone over Scandinavia and Central Europe, which deflected the Atlantic depressions towards Iceland, allowing only their warm humid winds to pass over the British Islands as a southerly or south-easterly current. On Monday, the 19th, a cold wave swept westward across Central Europe from Little Russia and Moldavia, in which districts a heavy fall of snow had taken place. Freezing temperatures were reported from Germany and the inland parts of France on several consecutive days after that date. The cold weather affected the British Isles also in a modified degree from the 21st to the 25th, inclusive, but the mild weather returned on the latter date and lasted to the close of the month. The scanty rainfall, also, was noteworthy for October.

In Dublin the arithmetical mean temperature (55·4°) was very much above the average (49·5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 54·5°. In the forty-four years ending with 1908, October was coldest in 1892 (M. T. = 44·8°), and in 1896 (M. T. = 45·0°). It was warmest in 1908 (M. T. = 55·4°), and in 1876 (M. T. = 53·1°). The M. T. in 1907 was 49·9°.

The mean height of the barometer was 30·038 inches, or 0·198 inch above the corrected average value for October—namely, 29·840 inches. The mercury rose to 30·463 inches at 9 a.m. of the 22nd, and fell to 29·725 inches at 9 p.m. of the 8th. The observed range of atmospheric pressure was, therefore, 0·738 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 54·5°, or only 0·8° below the value for September, 1908. The arithmetical mean of the maximal and minimal readings was 55·4°, compared with a thirty-five years' (1871–1905) average of 49·5°. Using the formula, *Mean Temp. = Min. + (Max. — Min.* × ·485), the mean temperature was 55·2°, or 5·9° above the average mean temperature for October, calculated in the same way, in thirty-five years, 1871–1905, inclusive (49·3°). On the 2nd the thermometer in the screen rose to 68·7°—wind, S.E.; on the 26th the temperature fell to 38·0°—wind, N.E. The minimum on the grass was 34·0°, also on the 26th.

The rainfall was 1·219 inches, distributed over 13 days; both the rainfall and the rainy days were much below the average. The average rainfall for October in the thirty-five years, 1871–1905, inclusive, was 2·870 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7·358 inches on 15 days. In 1875, also, 7·049 inches fell on 26 days. On the other hand, in 1904 only ·454 inch fell on 11 days, in 1890 only ·639 inch fell on but 11 days; in 1884, only ·834 inch on but 14 days; and in 1868 only ·856 inch on 15 days. In 1907 the rainfall was 5·121 inches on 29 days.

High winds were noted on 7 days, but never attained the force of a gale. The atmosphere was more or less foggy in Dublin on the 1st, 5th, 21st, 23rd, 24th, 25th, and 31st. There was a lunar halo on the 10th.

The rainfall in Dublin during the ten months ending October 31st, 1908, amounted to 20·776 inches on 167 days, compared with 12·366 inches on 123 days during the same period in 1887 (the dry year), 20·466 inches on 145 days in 1901, 24·481 inches on 172 days in 1902, 27·882 inches on 196 days in 1903, 19·601 inches on 163 days in 1904, 20·462 inches on 161 days in 1905, 19·439 inches on 168 days in 1906, 22·261 inches on 182 days in 1907, and a thirty-five years' (1871–1905) average of 23·030 inches on 164 days.

Mr. William J. Good reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·040 inches, the range of atmospheric pressure being from 29·735 inches at 9 p.m. of the 8th to 30·458 inches at 9 p.m. of the 22nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55·4°. The arithmetical mean of the daily maximal and minimal temperatures was 55·5°. The screened thermometers rose to 70·1° on the 2nd, and fell to 38·0° on the 25th. On this latter date the grass minimum was 28·7°. On the 3rd the black bulb *in vacuo* rose to 110·0°. Rain fell on 10 days to the amount of 1·135 inches, the greatest fall in 24 hours being ·214 inch on the 20th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 87·6 hours, of which 9·4 hours occurred on the 3rd. The mean daily sunshine was 2·8 hours. The mean temperature of the soil at 9 a.m. at a depth of one foot was 55·3°; at a depth of 4 feet it was 55·6°.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., returns the rainfall in October at 2·30 inches on 15 days, compared with 2·76 inches on 20 days in 1902, 3·82 inches on 26 days in 1903, only ·29 inch on 12 days in 1904, 1·01 inches on 14 days in 1905, 3·43 inches on 24 days in 1906, 4·98 inches on 28 days in 1907, and a twenty-two years' average (1885–1906) of 2·789 inches on 16·8 days. On the 20th ·60 inch fell. Since January 1, 1908, 22·06 inches of rain have fallen at this station on 161 days.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 2·491 inches on 15 days, the greatest fall in 24 hours being ·515 inch on the 20th. The mean shade temperature was 52·9°, the extremes being—highest, 65·5° on the 1st; lowest, 33·5° on the 26th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 15 days to the amount of 1·77 inches, compared with 2·40 inches on 21 days in 1901, 3·45 inches on 24 days in 1902, 3·38 inches on 26 days in 1903, ·42 inch on 9 days in 1904, 1·54 inches on 15 days in 1905, 4·52 inches on 24 days in 1906, and 5·40 inches on 30 days in 1907. The greatest measurement in 24 hours was ·35 inch on the 15th. The mean temperature in the shade was 55°, the range being from 70° on the 2nd and 3rd to 38° on the 25th and 26th. The mean temperature of October was 50·0° in 1901, 50·9° in 1902, 50·8° in 1903, 51·6° in 1904, 47·1° in 1905, 50·7° in 1906, and 49·9° in 1907.

Dr. Christopher Joynt, F.R.C.P.I., registered 1·235 inches of rain on 13 days at 21, Leeson Park, Dublin, the largest measurement in 24 hours being ·235 inch on the 20th.

Dr. Arthur G. Price recorded 3·48 inches of rain on 18 days at Clonsilla, Greystones, Co. Wicklow, the greatest rainfall in 24 hours being ·93 inch on the 19th. Since January 1, the measurement at this station has been 25·73 inches on 150 days. The mean temperature for October was 50·5°, the mean maximum being 56·7°, and the mean minimum 44·3°. The shade thermometer rose to 68° on the 3rd, and fell to 35° on the 24th.

Dr. Launcelot T. Burra reports that at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow, the October rainfall was 3·60 inches on 17 days, the maximum on one day being ·760 inch on the 19th. The mean temperature at 9 a.m. and 9 p.m. was 55·2°. The screened thermometers rose to 70·6° on the 3rd, and fell to 35·6° on the 25th.

Mr. William Miller states that in the City of Cork there were 19 days with rain during the month —total fall, 3·21 inches, which was 0·09 inch less than the average. The greatest day's rain was that of the 7th—0·93 inch. The rainfall of the past ten months was 26·32 inches, which was 3·77 inches short of the average for the same period.

The Rev. Arthur Wilson, M.A., recorded a rainfall of 3·94 inches on 20 days at the Rectory, Dunmanway, Co. Cork. The heaviest falls in 24 hours were 1·35 inches on the 7th, ·60 inch on the 8th, and ·40 inch on the 28th. The rainfall for the first 10 months of 1908 is 41·63 inches on 174 days, compared with 43·18 inches in 1905, 43·29 inches in 1906, and 42·31 inches in 1907.

At the Ordnance Survey Office, Phœnix Park, Dublin, the October rainfall was 1·418 inches on 16 days, compared with 2·551 inches on 20 days in 1906, 1·365 inches on 17 days in 1905, ·650 inch on 10 days in 1904, and 2·339 inches on 24 days in 1903. The heaviest fall in 24 hours was ·273 inch on the 20th. The total amount of bright sunshine was 109·1 hours, the daily maximal duration being 9·3 hours on the 3rd.

At the Royal Botanic Gardens, Glasnevin, rain fell on 15 days to the amount of 1·510 inches, the greatest daily fall being ·41 inch on the 7th.

NOVEMBER.—A mild and open month, ranking third in the list of warm Novembers observed within the past forty-four years. The rainfall was very moderate—only 45·5 per cent. of the average, and the rain days also were comparatively few—70·6 per cent. of the average. During the first week quiet anticyclonic weather and light S.E. winds prevailed. In the course of the second week cyclonic conditions became established, the wind settled in S. or S.W., and there were frequent falls of rain, chiefly, however, of slight intensity. In Dublin, ·362 inch was recorded on the 13th. A temporary chill occurred on the 14th and 15th, but changeable, mild and rainy weather prevailed over the greater part of Ireland and Scotland, as is usual during the prevalence of S.W. air currents. A severe storm—the first of the season—swept over the British Isles on the 21st and 22nd. The barometer sank to 28·7 inches in the storm centre between the Shetlands and Norway, and the S.W. winds of the system raised the temperature to 58° at some stations. During the fourth week a series of large and deep depressions passed across the ocean from Iceland to Scandinavia, causing very unsettled conditions—squalls, showers, hail and thunder and lightning in the far North, and open, breezy weather in the south and south-east.

In Dublin the arithmetical mean temperature (48·1°) was 2·8° above the average (45·3°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 47·3°. In the forty-four years ending with 1908, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·2°); warmest in 1899 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1907 the M. T. was 44·6°.

The mean height of the barometer was 29·978 inches, or 0·118 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·403 inches at 9 a.m. of the 30th, having fallen to 29·456 inches at 9 p.m. of the 22nd. The observed range of atmospheric pressure was, therefore, ·947 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47·3°, or 7·2° below the value for October, 1908. The arithmetical mean of the maximal and minimal readings was 48·1°, compared with a thirty-five years' (1871–1905) average of 45·3°. On the 11th the thermometer in the screen rose to 59·6°—wind, S.S.W.; on the 30th the temperature fell to 31·1°—wind, calm. The minimum on the grass was 27·0° on the 30th.

The rainfall was 1·237 inches on 12 days—the rainfall and rainy days were much below the average. The average rainfall for November in the thirty-five years, 1871–1905, inclusive, was 2·720 inches, and the average number of rainy days was 17. In 1888, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only ·664 inch on 9 days. In 1907 the rainfall was 2·584 inches on 14 days.

High winds were noted on 8 days, and attained the force of a gale on the 21st and 22nd. The atmosphere was more or less foggy in Dublin on the 4th, 5th, and 30th. A solar halo was seen on the 3rd. Lunar halos appeared on the 3rd and 4th; a lunar corona on the 5th. Lightning was seen on the evening of the 22nd. Hail fell on the 24th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 22·013 inches on 179 days, compared with 15·378 inches on 141 days during the same period in 1887, 24·086 inches on 156 days in 1901, 27·812 inches on 190 days in 1902, 30·015 inches on 212 days in 1903, 20·678 inches on 172 days in 1904, 24·013 inches on 180 days in 1905, 21·001 inches on 185 days in 1906, 24·845 inches on 196 days in 1907, and a thirty-five years' average of 25·750 inches on 181 days.

At the Normal Climatological Station in Trinity College, Dublin, Mr. William J. Good reports that the mean height of the barometer was 29·978 inches, the range of atmospheric pressure being from 30·400 inches at 9 a.m. of the 30th to 29·469 inches at 9 p.m. of the 22nd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 48·4°. The arithmetical mean of the daily maximal and minimal temperatures was 48·8°. The screened thermometers rose to 61·1° on the 11th, and fell to 30·6° on the 30th. On the 30th the grass minimum was 19·9°. Rain fell on 12 days to the amount of 1·156 inches, the greatest fall in 24 hours being ·339 inch on the 13th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 48·1 hours, of which 5·5 hours occurred on the 8th, and again on the 14th. The mean daily sunshine was but 1·6 hours. The mean temperature of the soil at 9 a.m. was 48·3° at a depth of 1 foot; at a depth of 4 feet it was 51·2° at 9 a.m.

At Cloneevin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., states that 1·24 inches of rain fell on 12 days, compared with a twenty-three years' (1885–1907) average of 2·951 inches on 16 days. The maximal fall in 24 hours was ·38 inch on the 13th. Since January 1, 1908, 23·30 inches of rain have fallen at this station on 176 days. The corresponding figures for 1901 were 26·10 inches on 161 days; 1902, 30·18 inches on 178 days; 1903, 30·05 inches on 203 days; 1904, 20·39 inches on 166 days; 1905, 25·95 inches on 167 days; 1906, 20·22 inches on 183 days; and 1907, 23·71 inches on 182 days.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 2·010 inches on 15 days. Of the total quantity, ·425 inch fell on the 14th.

Dr. Launcelot T. Burra reports a rainfall of 2·105 inches on 14 days at the Royal National Hospital for Consumption for Ireland, Newcastle, Co. Wicklow. The greatest fall in 24 hours was ·410 inch on the 13th. The mean temperature for the month was 48·5°, the maximum being 60·1° on the 3rd, and the minimum 34·0° on the 30th.

The rainfall recorded at Clonsilla, Greystones, by Dr. Arthur G. Price was 1·88 inches on 13 days. The greatest fall in 24 hours was ·39 inch on the 13th. The mean temperature was 46·6°, the extremes being—highest, 60° on the 3rd; lowest, 30° on the 29th. Between 9 p.m. and midnight of the 21st the thermometer rose to 55°, having been no higher than 50° during the previous day.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 16 days to the amount of 1·56 inches, the greatest measurement in 24 hours being ·53 inch on the 13th. In November, 1901, the rainfall was 3·53 inches on 8 days; in 1902, it was 4·61 inches on 17 days; in 1903, 1·93 inches on 14 days; in 1904, 1·26 inches on 11 days; in 1905, 4·35 inches on 22 days; in 1906, 1·60 inches on 15 days; and in 1907, 3·10 inches on 19 days. The mean temperature in the shade was 47·7°, the range being from 58° on the 11th to 31° on the 30th.

Dr. Christopher Joynt, F.R.C.P.I., registered 1·315 inches on 16 days at Leeson Park, Dublin. The maximum in 24 hours was ·395 inch on the 13th. In November, 1905, 3·795 inches of rain had been recorded at this station; in 1906, 1·485 inches, and in 1907, 2·810 inches.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was ·982 inch on 14 days—the greatest fall in 24 hours being ·31 inch on the 13th. The mean shade temperature was 44·6°, the extremes being—highest, 55° on the 3rd; lowest, 26·5° on the 29th.

In the City of Cork Mr. William Miller returns the rainfall at 2·52 inches, or 1·36 inches less than the average for November. There were 16 rainy days. The heaviest fall in 24 hours was ·60 inch on the 13th. Up to November 30th, the rainfall of 1908 amounted to 28·84 inches—that is, 5·13 inches less than the average for eleven months of the year.

At Dunmanway Rectory, Co. Cork, the Rev. Arthur Wilson, M.A., registered a rainfall of 3·45 inches on 17 days, the heaviest fall in 24 hours being 1·30 inches on the 27th. A brilliant afterglow occurred on the evening of the 28th, with belts of green, gold, yellow and red.

At the Ordnance Survey Office, Phœnix Park, Dublin, rain fell on 16 days to the amount of 1·295 inches, the largest measurement in 24 hours being ·285 inch on the 21st. The total amount of sunshine was 79·6 hours, the most in one day being 7·3 hours on the 8th.

DECEMBER.—In its main features December of 1908 closely resembled its namesake of 1907—it was a dull, damp, mild month, save for the piercing cold of a few days following Christmas. As in 1907, the opening day of the month found an anticyclone stretching across the British Isles from Central Europe. The chill attending this system caused dense wet fogs, which in Dublin on the 1st and 2nd yielded measurable quantities of water in the rain-gauge. On the 3rd a warm S.W. wind arrived from the Atlantic, and during the following seven days a deep depression was found over Iceland, shallow V-shaped secondaries passing from time to time across the British Isles in an easterly direction. On the 10th a very rapid decrease of pressure took place in Ireland, the barometer falling at night below 28·7 inches in Dublin. No very violent gales attended this disturbance, but lightning and hail were reported from several stations. The weather remained open, with prevalent S.W. winds, until Christmas Eve, when a keen S.E. wind brought a lower temperature to Great Britain from the Continent. On Christmas Day the barometer rose fast over Scandinavia, and a brisk fall of temperature occurred in Central Europe. Atlantic depressions at the same time stretched across the ocean from Iceland to Ireland. Gradients for southerly and south-easterly winds became very steep in this country, with the result that a strong gale prevailed on the 28th and in the early morning hours of the 29th. The storm was accompanied by torrents of rain in some of the central counties and by a blizzard of snow and sleet in Dublin and a heavy fall of snow over Ulster. Great Britain experienced heavy snowfalls and keen frost, the thermometer falling to 9° at Oxford and Nottingham on the morning of the 30th.

In Dublin the arithmetical mean temperature (43·7°) was 1·7° above the average (42·0°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 43·1°. In the forty-four years ending with 1908, December was coldest in 1878 (M. T. = 32·8°), and in 1874 (M. T. = 36·8-); warmest in 1898 (M. T. = 47·6°), and in 1900 and 1905 (M. T. = 47·1°).

The mean height of the barometer was 29·785 inches, or 0·090 inch below the corrected average value for December—namely, 29·875 inches. The mercury rose to 30·356 inches at 9 a.m. of the 1st, and fell to 28·698 inches at 11 p.m. of the 10th. The observed range of atmospheric pressure was, therefore, 1·658 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·1°, or 4·2° below the value for November, 1908. Using the formula, *Mean Temp. = Min.* + (*Max.* — *Min.* × ·52), the value was 43·8°, or 1·7° above the average mean temperature for December, calculated in the same way, in the thirty-five fears, 1871–1905, inclusive (42·1°). The arithmetical mean of the maximal and minimal readings was 43·7°, compared with a thirty-five years' average of 42·0°. On the 21st the thermometer in the screen rose to 56·7°—wind, S.S.W.; on the 16th the temperature fell to 27·9°—wind, S.W. The minimum on the grass was 26·9° on the 16th. There were only 2 days of frost in the screen, but 9 nights of frost on the grass were recorded.

The rainfall was 1·740 inches, distributed over 19 days. The average rainfall for December in the thirty-five years, 1871–1905, was 2·25 inches, and the average number of rainy days was 17. The rainfall, therefore, was about half an inch below, while the rain-days were slightly above the average. In 1876 the rainfall in December was very large—7·566 inches on 22 days. In 1868 (which was otherwise a fine and dry year), 4·749 inches fell on as many as 27 days. On the other hand, in 1867, only ·771 inch was measured on 13 days; in 1885, only ·742 inch on 10 days; in 1892, only ·795 inch on 10 days; and in 1871, only ·797 inch on 15 days. In 1907, 2·149 inches of rain fell on 22 days.

High winds were noted on 11 days, and attained the force of a gale on two occasions—the 28th and 29th. The atmosphere was more or less foggy in Dublin on the 1st, 2nd, 15th, 16th, 19th, 20th, 21st, and 23rd. Hail fell on the 8th and 13th; snow and sleet on the 28th. A solar halo was seen on the 12th, and a lunar halo or corona on the 4th, 5th, 7th, 9th, and 31st. Lightning occurred on the 6th.

The rainfall in Dublin during 1908 amounted to 23·753 inches on 198 days, compared with 26·994 inches on 218 days in 1907, 22·807 inches on 203 days in 1906, 25·277 inches on 193 days in 1905, 22·180 inches on 189 days in 1904, 31·601 inches on 228 days in 1903, 29·375 inches on 203 days in 1902, 26·075 inches on 179 days in 1901, only 16·601 inches on 160 days in 1887, and a thirty-five years' (1871–1905) average of 28·00 inches on 198 days.

Mr. William J. Good reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·785 inches, the range of atmospheric pressure being from 30·350 inches at 9 a.m. of the 1st to 28·774 inches at 9 p.m. of the 10th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43·8°. The arithmetical mean of the daily maximal and minimal temperatures was 44·3°. The screened thermometer rose to 58·6° on the 21st, and fell to 27·3° on the 16th. On the 30th the grass minimum was 23·0°. Rain fell on 13 days to the amount of 1·525 inches, the greatest fall in 24 hours being ·580 inch on the 28th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 21·3 hours, of which 3·4 hours occurred on the 9th. The mean daily sunshine was 0·7 hour. The mean temperature of the soil at 9 a.m. at a depth of one foot was 43·4°; at a depth of 4 feet it was 47·1°.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall in December was 3·310 inches on 19 days, compared with 2·565 inches on 20 days in 1907, 1·860 inches on 11 days in 1906, 1·405 inches on 10 days in 1905, 1·890 inches on 15 days in 1904, 2·830 inches on 18 days in 1903, and 2·920 inches on only 11 days in 1902. Of the total amount 1·800 inches fell on the 28th.

Dr. Arthur G. Price reports a rainfall of 3·69 inches on 20 days at Clonsilla, Greystones, Co. Wicklow, the heaviest fall in 24 hours being 1·90 inches on the 28th. The mean temperature of December was 42·4°, the extremes being—highest, 52° on the 19th, 20th, and 31st; lowest, 28° on the 27th. The rainfall during 1908 at Clonsilla amounted to 31·30 inches on 183 days. The greatest daily measurement was 2·67 inches on August 20th.

Mr. T. Bateman reports that the rainfall at The Green, Malahide, Co. Dublin, was 3·036 inches on 18 days. The greatest fall in 24 hours was 1·15 inches on the 28th. The mean shade temperature was 39·7°, the extremes being—highest, 50·5° on the 5th; lowest, 23·5° on the 15th.

Dr. Christopher Joynt, F.R.C.P.I., recorded 1·855 inches of rain on 16 days at 21, Leeson Park, Dublin. On the 28th ·860 inch was recorded. The total rainfall for the year was 24·400 inches on 199 days, compared with 23·112 inches on 198 days in 1906, and 27·365 inches on 217 days in 1907.

Mr. Robert O'Brien Furlong, C.B., reports that the rainfall at Cloneevin, Killiney, Co. Dublin, was 2·36 inches on 23 days, the maximum being ·98 inch on the 28th. The average December rainfall at this station in 23 years (1885–1907) was 2·341 inches on 17·3 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 19 days to the amount of 2·71 inches, 1·34 inches being measured on the 28th. Temperature ranged from 54·0° on the 5th, 20th, and 21st to 30° on the 16th. The mean shade temperature was 43·6° Fahrenheit. The total rainfall in 1908 at Lynton was 28·85 inches on 215 days, compared with 25·61 inches on 205 days in 1906, and 28·36 inches on 219 days in 1907.

At Cork, according to Mr. W. Miller, the December rainfall was 3·80 inches on 25 days, the measurement being 0·43 inch short of the average. The greatest daily rainfall was 0·35 inch on the 27th. The year's rainfall at this station was 32·64 inches on 196 days, the total being 5·61 inches under the average, while the rain-days were one short of the average.

The Rev. Arthur Wilson, M.A., reports that rain fell on 28 days at the Rectory, Dunmanway, Co. Cork, to the large amount of 76·9 inches. The heaviest falls were ·63 inch on the 12th, ·61 inch on the 22nd, and ·60 inch on the 27th. The rainfall for the year was 58·07 inches. In 1905 it had been 54·72 inches on 211 days, in 1906, 50·55 inches on 228 days, and in 1907, 58·40 inches on 244 days.

The rainfall at the Ordnance Survey Office, Phœnix Park, Dublin, was 1·790 inches on 19 days, the maximum in 24 hours being ·350 inch on the 22nd. The total amount of sunshine was 36·6 hours; the largest daily amount was 5·3 hours on the 6th. The thermometer fell to 24·9° in the screen on the morning of the 16th.

RAINFALL IN 1908.

a Maximum.

The rainfall was 23·753 inches, or 4·247 inches less than the average annual measurement of the thirty-five years, 1871–1905, inclusive—viz., 28·000 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16·601 inches—the only approach to this measurement in Dublin being in 1870, when only 20·859 inches fell; in 1884, when the measurement was 20·467 inches; and in 1883, with its rainfall of 20·493 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 32·966 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34·338 inches, or 6·338 inches in excess of the average for the thirty-five years, 1871–1905. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35·566 inches fell on 238 days, and in 1880, when 34·512 inches were measured on, however, only 188 days. In 1907 the rainfall was 26·994 inches on 218 days.

In 1908 there were 198 "rain-days" or days upon which not less than ·005 inch of rain (five-thousandths of an inch) was measured. This was exactly the average number of rain-days, in the thirty-five years, 1871–1905, inclusive. In 1868 and 1887—the warm, dry years of recent times—the rain-days were only 160, and in 1870 they were only 145.

On only one occasion in 1908 did one inch of rain fall on a given day in Dublin—viz., August 20th, 1·650 inches. In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measurement was 2·037 inches. In 1902, 1·342 inches fell on July 25th, and 2·075 inches on September 2nd. In 1903 the maximal daily rainfall was ·966 inch on September 10th. In 1904, 1·092 inches fell on May 31st, and 1·197 inches on September 12th. The excessive rainfall on August 25th, 1905, is especially noteworthy—it amounted to 3·436 inches in Dublin (Fitzwilliam-square). It was the ninth occasion only since 1865—that is, in 42 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were:—August 13th, 1874 (2·482 inches); October 27th, 1880 (2·736 inches); May 28th, 1892 (2·056 inches); July 24th, 1896 (2·020 inches); August 5th, 1899 (2·227 inches); August 2nd, 1900 (2·135 inches); November 11th, 1901 (2·037 inches); and September 2nd, 1902 (2·075 inches). On no previous occasion within the past 43 years had 3 inches or upwards been measured.

Included in the 198 rainy days in 1908 are 16 on which snow or sleet fell, and 25 on which there was hail. In January hail was observed on one day, in February on 5 days, in March on 5 days, in April on 4 days, in May on 5 days, in June on one day, in August on one day, in November on one day, and in December on 2 days. Snow or sleet fell on 2 days in January, 4 days in February, 6 days in March, 3 days in April, and one day in December. Thunderstorms occurred on May 12 and 31, and on July 16. Thunder was heard without visible lightning twice in July. Lightning was seen once in February, July, November and December.

The rainfall in the first six months was 11·729 inches on 107 days. In the second six months it was 12·024 inches on 91 days.

The rainfall was distributed quarterly as follows:—6·367 inches fell on 58 days in the first quarter, 5·362 inches on 49 days in the second, 7·828 inches on 47 days in the third, 4·196 inches on 44 days in the fourth quarter.

More or less fog prevailed on 33 occasions—7 in January, 6 in March, 3 in April, 1 in June, 1 in July, 4 in October, 3 in November, and 8 in December. High winds amounted to gales (force 8 or upwards, according to the Beaufort scale) on 18 occasions—4 in January, 3 in February, 6 in March, one in August, 2 in November, and 2 in December.

Solar halos were seen on 15 occasions, a lunar halo on 18 nights, a lunar corona on 8 nights. Aurora borealis was seen twice in April and once in August.

The year was remarkable for the coldness of the spring and the warmth of the autumn. Not since 1876 had such a spell of cold weather been recorded in April as that which made memorable the Easter Week of 1908. The remarkable point about this cold snap was its occurrence in one of the coldest—and most persistently cold—springs of recent times. March was unsettled, rainy, but—above all—cold: its mean temperature was only half a degree (Fahrenheit) above that of the previous January, and was actually 2·8° below that of its predecessor, February. And April was proportionately severe, while the defect in temperature in fact increased as the month advanced. On Friday, the 24th, a bitterly cold wave from the northward reached Ireland and England—snow and hail fell in large quantities, and intense night-frosts threatened the promise of spring. In Dublin the mean temperature of Friday, the 24th, was 32·9°, or 14·7° below the average, the extremes being—lowest, 25·1°; highest, 40·7°.

September was generally cool, but a remarkable spell of very unusual warmth which set in on the 27th raised the mean temperature to the average for the month.

October, 1908, will be remembered as the warmest October on record within recent times. The mean temperature (55·4°) was 5·9° above the average. On 17 days, the thermometer rose to 60° or upwards in the screen—daily until the 15th. Once only did it fail to reach 50°—on the 24th, when the maximum was 48·4°. The mean minimum in the screen for the month was 50·6°, identical with the value for the previous month; and the mean minimum on the grass was as high as 46·5°, or actually 0·4° in excess of the figure recorded in September, 1908.

November was mild and open, ranking third in the list of warm Novembers observed within the past forty-four years; and December also was—for the most part—mild, the mean temperature being 2·3° above the average.

Mr. Robert O'Brien Furlong, M.A., C.B., reports relative to the rainfall in 1908 at Cloneevin, Killiney:—The total number of inches was 25·66 on 196 days, compared with 22·34 inches on 201 days in 1906, and 25·94 inches on 203 days in 1907.

The rainfall of 1908 is 2·013 inches below the average of 23 years (1885–1907)—viz., 27·673 inches

The number of days on which ·01 inch or upwards fell—viz., 196—is 10 in excess of the average for the same period—viz., 186 days.

The greatest amount measured in any month during 1908 was 3·67 inches on 14 days in August; the smallest, ·92 inch, on 17 days in February.

The heaviest fall in 24 hours was on August 20, when 2·09 inches fell.

Abstract of Meteorological Observations taken at Dublin (40, *Fitzwilliam-square, West*) *during the Year* 1908.

* The Hours of Observation are 9 a.m. and 9 p.m.

† The Averages used are based on observations as follows:—Temperature 35 years, 1871-1905; Rainfall 35 years, 1871-1905; Sunshine 25 years, 1881-1905. *Wind Force*—Beaufort Scale (0–12), is used. The number of observations of Moderate and Strong Winds (force 4–7), the number of observations of Calm and the number of days of Gale are given in the table.

‡ The Sunshine Values are obtained from the Mountjoy Observatory in the Phœnix Park, and the Earth Temperatures from Trinity College.

NOTE.—The mean pressures shown in the above Table have been given corrected for instrumental error and reduced to 32° Fahrenheit, but not reduced to mean sea level. If it be desired for any purpose to reduce them to the normal, the approximate correction for the purpose (varying within slight limits with the pressure and the temperature) is: + ·058.

NOTE.—The temperatures given above were deduced from the maximal and minimal readings of the thermometer. For the years 1888 and 1889, Kæmtz's Formula was used, viz.:—Mean Temperature = Min. + (Max.—Min.) ·41; for subsequent years the Formula used was the following:—Mean Temperature = Min. + (Max.—Min.) C, the co-efficient C varying from month to month.

TABLE OF METEOROLOGICAL DATA FOR IRELAND.

Prepared in the Meteorological Office under the direction of W. N. Shaw, Esq., LL.D., Sc.D., F.R.S.; and published in the Quarterly Reports of the Registrar-General for Ireland.

In compiling the following Table (pp. 178-185), the stations have been grouped into two Districts, namely, 1. Ireland, North; 2. Ireland, South. Each District is represented by six stations.

The stations selected, with the names of the Observers, are as follows:—

LIST OF STATIONS AND OBSERVERS.

Station.	Observer.
IRELAND, NORTH:—	
Malin Head, ...	Meteorological Office.
Blacksod Point, ...	Do.
Markree Castle, ...	J. R. Armstrong, for Bryan Cooper, Esq.
Donaghadee, ...	Meteorological Office.
Armagh, The Observatory, ..	J. L. E. Dreyer, Ph.D.
Belfast, Queen's College, ..	John Wylie, B.A.
IRELAND, SOUTH:—	
Dublin (City), ...	Sir John W. Moore, M.D.
Waterford, ...	J. N. White, Esq.
Birr Castle, ...	O. Boeddicker, PH.D., for the Earl of Rosse
Killarney, ...	E. W. Griffin, M.D.
Valencia, ...	Meteorological Office.
Roche's Point, ...	Do.

NOTES ON THE STATISTICAL TABLES.

Hours of Observation.—Observations are made at 7 a.m. and 6 p.m. G.M.T. at telegraphic reporting stations, and at 9 a.m. and 9 p.m. mean local time, at normal climatological stations. The names of normal climatological stations are printed in heavy type. At Waterford and Killarney observations are taken at 9 a.m. only.

Barometer.—The correction for latitude has not been applied. The values are for station level. They are the means of readings at 7 a.m. and 6 p.m., or at 9 a.m. and 9 p.m. respectively.

Hygrometer and Cloud.—At Malin Head, Blacksod Point, Donaghadee, and Roche's Point the results under these headings are based on the morning observations only.

Rainfall.—The amounts are those for the 24 hours commencing at the time of morning observation.

Weather Phenomena.—The number of days of Rain, Snow, Hail, Thunderstorm, Fog and Gale, are counted irrespective of the hours at which the phenomena occur. Except in the case of rainfall (see above) the day is the civil day. A day is reckoned as a day of "clear sky," if the average of the estimates of the "amount of cloud" at the two hours of observation is less than 2, and as an "overcast" day if the average is greater than 8.

Wind Summaries.—The results given under wind direction, and the number of observations of calms and of fresh or strong wind, are based on the observations at fixed hours taken twice a day. At Valencia and Armagh the wind observations are based on the records of a standard Robinson anemometer (factor 2·2). Velocities of between 13 and 38 miles in the hour have been entered as "fresh or strong winds," velocities of 39 miles in the hour, or above, as gales. These limits have been selected in accordance with the equivalent of the Beaufort Scale given in a Report by the Director of the Meteorological Office, entitled "The Beaufort Scale of Wind Force .. .. ." Official No. 180.

Averages.—The averages used for stations are:—Temperature and Rainfall for the 35 years 1871-1905. Bright Sunshine for the 25 years 1881-1905.

District Values.—The district values of temperature, rainfall, and sunshine are computed from the data for the stations included in the Weekly Weather Report of the Meteorological Office. Only a selection of these stations is included in this Report. The average values with which the current district values are compared are for the 25 years, 1881-1905. The district values for "amount of cloud" and for the extremes of temperature and the largest rainfall in a day, are taken from the Monthly Weather Report of the Meteorological Office.

Youghal,	89, 122

* Thus, the number of Marriages in the Abbeyleix Superintendent Registrar's District may at once be ascertained by referring in the "*Abstract of Marriages*" to the Superintendent Registrar's District, numbered 43 (*see* page 6); and in like manner the number of Births and Deaths, of Deaths at different ages, &c., will be found by referring to the same Superintendent Registrar's District Number in the appropriate Tables.

INDEX TO REGISTRARS' DISTRICTS.

[The Number or Numbers against each Registrar's District in the Third Column refers to the page in which the Total Births, Illegitimate Births, Deaths, &c., in the District during the year are given.]

DUBLIN CASTLE,

7th July, 1909.

SIR,

I have to acknowledge the receipt of your letter of the 5th instant, forwarding, for submission to His Excellency the Lord Lieutenant, your Annual Report on Marriages, Births and Deaths for the year 1908.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Registrar-General,
Charlemont House,
Dublin.

DUBLIN: Printed for His Majesty's Stationery Office.
By ALEX. THOM & Co. (Limited), 87, 88, & 89, Abbey-street.
